A DICTIONARY of the English language, in order to be complete, must contain all the words of the language in their correct orthography, with their pronunciation and etymology, and their definition, exemplified in their different meanings by citations from writers belonging to different periods of English literature ; and such a Dictionary cannot be brought into a small compass. An attempt has been made to render the work which is now offered to the public as complete as possible, without being too large and too expensive for common use.

This Dictionary is formed on a plan similar to that of the “Universal and Critical Dictionary” of the author, published in 1846 ; but it is much larger and more comprehensive. The “Universal Dictionary” contains, in addition to the words found in Todd’s edition of Johnson’s Dictionary, nearly 27,000 words for which authorities are given. In addition to these, this work contains about 19,000 words, which have been derived from a great variety of sources ;—the total number being about 104,000. Authorities are given for almost all the words that are inserted. It has been an especial rule to give authorities for all such as are technical, obsolete, antiquated, rare, provincial, local, colloquial, of recent introduction, or of doubtful propriety ; also for the obsolete, provincial, local, or questionable use or meaning of words ; and words, and the meaning of words, which are technical, obsolete, antiquated, provincial, local, colloquial, or of recent introduction, are generally noted as such. A Dictionary that is designed to be a complete glossary of all English books which are now read, must contain many words which are obsolete, and many which are unworthy of being countenanced. Many such are found in Johnson’s Dictionary, especially in Todd’s edition of it, and in the other principal English Dictionaries. The use of a considerable number of words which were obsolete fifty or a hundred years ago, has since been revived, and some which are marked as obsolete may doubtless have been used by some recent writers, and the use of others may probably be hereafter revived.

Much care has been bestowed upon orthography ; and the design has been to give that which is in accordance with the best usage both in England and in the United States. With respect to orthography, the principal American authors differ little from the established English usage. The most noted difference relates to a few words ending in *or* or *our*, as *favor*, *honor*, or *favour*, *honour*. In this country it is the general practice to omit the *u* ; though in England, in a small number of words, the most of which are dissyllables, it is commonly retained. (See *Remarks on Orthography*, page xxv.)

In the preparation of this Dictionary, the subject of orthoepey has received much attention ; and with respect to words of various, doubtful, or disputed pronunciation, the different modes, with their respective authorities, are exhibited ; and the reader may here see in what manner these words are pronounced by all the most eminent English orthoepists. There is much diversity in the pronunciation of many of these words, both among professed orthoepists and among the best speakers of the language. It is not possible that any individual should know from personal observation what is the best usage with respect to all these words ; and no one, who is scrupulous about his pronunciation, will be willing to place implicit reliance on any single orthoepist, but he will wish, in relation to doubtful matters, to know the different modes adopted by all who are entitled to be regarded as having much authority. The reader who is desirous of this sort of information may here find it condensed in a small space and convenient form, and thus be spared the labor of searching for it in many volumes. In relation to many of the words about which orthoepists differ, it is difficult to decide which mode is to be preferred ; and it is not to be supposed that that for which a preference is here indicated will, in all cases, be deemed the best ; but when it is not, the reader will find the mode which he may prefer enclosed in brackets, and supported by its proper authority. In relation to a considerable number of these words, remarks are extracted from orthoepists,

especially from Wasker, and the notes in whose Dictionary, that are esteemed of much value, have been inserted. There are many words in this book which are not to be found in any Pronouncing Dictionary, and it can hardly be expected that the correct pronunciation of all of them should be given.

Most of the words of the English language are readily traced to the Teutonic, or Gothic languages, especially to the Anglo-Saxon; or to the Græco-Latin languages, especially the Latin through the French; and in treating of the etymology of words, these two classes of languages are kept distinct. The derivation of nearly all the primitive words, as far as it has been ascertained, has been given; with respect to disputed or uncertain etymologies, the authorities are generally specified; but long discussions on doubtful matters have been avoided. Besides what may be regarded as strict etymons of English words derived from the Latin, the parallel words of several sister languages, of Latin origin, have been, in numerous instances, inserted; and with regard to words of northern origin, parallel or cognate words of the different languages of the Teutonic or Gothic family have also been generally given. In relation to etymology, assistance has been derived from sources too numerous to be fully designated. With respect to the etymology of words from the Anglo-Saxon and other North-European languages, Dr. Bosworth's Dictionary of the Anglo-Saxon has been of great use; and of the English Dictionaries, that of Dr. Richardson has afforded much more assistance than any other. The titles of the works of many other authors, which have furnished more or less aid, with the date of their publication, are to be found in the Catalogues which follow the "History of English Lexicography."

The definition of words is regarded as the most important part of a Dictionary: and a word should be so defined as to exhibit the meaning, or the different meanings, in which it is used by good writers. Dr Richardson says, with respect to definition, "The great first principle upon which I have proceeded in the department of the Dictionary which embraces explanation, is that so clearly evolved and so incontrovertibly demonstrated in the 'Diversions of Purley'; namely, that a word has one meaning, and one only; that from it all usages must spring and be derived; and that in the etymology of each word must be found this single intrinsic meaning, and the cause of the application of those usages." And with respect to Johnson's Dictionary, he says, "It may seem harsh, but it is strictly true, that a great variety of instances might, with very little trouble, be collected of distinctions where no difference subsists."

Though there may be found in Johnson's Dictionary many instances in which a distinction is made where there is little or no difference, yet the principle stated by Horne Tooke, that "a word has one meaning, and one only," cannot be admitted without numerous exceptions. Take, for example, some very common words, as the verbs to *bear*, to *break*, to *get*, to *give*, to *lay*, to *make*, to *rise*, to *take*, to *throw*, to *turn*, and the nouns *law*, *letter*, *line*, *post*; though the different senses in which these words are used, may be, in some measure, in accordance with one original meaning of each, yet a single definition of each of the words would afford but a very inadequate explanation. The original or etymological meaning of many words has become obsolete, and they have assumed a new or more modern meaning; many which retain their etymological meaning have other meanings annexed to them; many have both a literal and a metaphorical meaning, and many both a common and a technical meaning,—all which need explanation.

This Dictionary will be found to contain numerous technical terms relating to theology, law, medicine, military and naval affairs, to architecture, astronomy, botany, chemistry, entomology, geology, ichthyology, mathematics, mechanics, mineralogy, music, ornithology, paleontology, zoölogy, &c. A Dictionary of the Arts and Sciences cannot be complete without numerous diagrams; and though it is not possible to make such a work as this, which is intended to be chiefly a Dictionary of the language, a complete technological Dictionary, yet the design has been to insert all such terms as the general reader is likely to meet with; and many terms, which cannot be well explained without a pictorial representation, are illustrated by wood-cuts. How far it is proper or expedient to introduce technical terms into a dictionary of the language, it is difficult to determine. Some would have them wholly excluded; and there are doubtless materials enough to make without them a large volume. Some such terms, however, are found in all the principal English Dictionaries; many words have both a common and a technical meaning; and it is difficult to form such a rule as would be a proper guide for determining what words of this description shall be admitted, and what ones excluded. Many of the words which may be regarded as technical are among those with respect to which the general reader most often needs to have an explanation; and a Dictionary which contained none of these terms would be regarded as very defective.

The arts and sciences, and the terms relating to them, are subject to great and frequent changes; and a Technological Dic-

tionary, perfect as it could have been made fifty years since, would now be very imperfect. Recourse has been had, in these matters, to recent and to the best authorities; and use has been made of the Dictionaries of Brande, Ure, Fairholt, Tomlinson, Baird, Falconer, Loudon, Dunglison, Bouvier, Burrill, Davis and Peck, Whishaw, Hook, Eden, Kitto, the Penny Cyclopædia, the English Cyclopædia, and many other dictionaries of the different arts and sciences, encyclopædias, and works on the various sciences, the titles of which are contained in the Catalogues of Dictionaries and Scientific Works. (See pages lxiii. to lxvii.) In this part of the Dictionary important assistance has been received from several gentlemen well versed in the different sciences.

Citations from respectable authors to exemplify and illustrate the use and meaning of words have been given, as far as the limits of the work would permit. These citations, among which may be found many of the gems of English literature, are deemed a very valuable portion of the volume, and it is to be regretted that there was not room for more; but the want of them has been, in a good measure, supplied by introducing detached phrases to illustrate the meaning of words, and by a notice of the synonyms of the language.

There are hardly any English words which are perfectly synonymous, or which have not some difference in their meaning or application; but there are many which are often used synonymously, and many which have meanings more or less similar; and the best way of giving the exact meaning and proper use of these words is to bring them together and exhibit their similarity and their difference of meaning and application. About five thousand words have been treated in this manner. The notices are necessarily short; yet brief as they are, they may be helpful to some who are desirous of attaining correctness and precision in the use of words. In preparing these notices, a free use has been made of the works on English Synonyms by Crabb, Taylor, Platts, Graham, and Whately.

All the verbs of the language that are often met with, both regular and irregular, are conjugated where they occur, and the preterites and perfect participles of the irregular verbs are also inserted separately in their alphabetical places: but of the regular verbs the present and perfect participles, ending in *ing* and *ed*, are not inserted as separate articles. If this had been done, as it has been in several other Dictionaries, it would have added upwards of ten thousand more words to the vocabulary, which would have considerably enlarged the size of the volume, without materially increasing its value.

Brief critical notes on the orthography, the pronunciation, the etymology, the grammatical form and construction, the technical, provincial, local, peculiar, and American uses of words, and also on many of the terms relating to the various arts and sciences, are scattered throughout the volume. The purpose has been to give the greatest quantity of useful matter in the most condensed form, and to specify, as far as possible, authorities in doubtful or disputed cases.

The introductory treatises on Pronunciation, Orthography, and various subjects relating to the English Language and to Lexicography, as well as the various matters contained in the Appendix, will be found useful accompaniments to an English Dictionary. The Key to the Pronunciation of Greek and Latin, and also of Scripture Proper Names, has been much enlarged and greatly improved. For a notice of these and other matters, the reader is referred to the respective Prefaces and Remarks prefixed to them.

English lexicography was commenced on a very limited scale, being at first restricted to the notice of what were termed "hard words." It is in its nature cumulative; every author or compiler of a Dictionary may be expected to produce something of his own, while he is very much aided by the labors of preceding lexicographers. Johnson, in preparing his Dictionary, made use of an interleaved copy of a folio edition of Bailey's; and Johnson's work, as Walker remarks, "has been deemed lawful plunder by every subsequent lexicographer." In the preparation of this Dictionary, assistance has been derived not only from that of Johnson, but from various other Dictionaries and Glossaries. Several Pronouncing Dictionaries have been used with respect only to pronunciation. In relation to many of the words of various or disputed pronunciation, Dr. Webster's authority is often cited in connection with that of the English orthoepists; and the edition of his Dictionary made use of is that of 1841, the latest that was published during the life of the author. With respect to a very few words of doubtful origin, Dr. Webster's etymology is noted in connection with that of other etymologists; but in no case, so far as is known, without giving him credit. In other respects, the rule adopted and adhered to, as to Dr. Webster's Dictionary, has been to take no word, no definition of a word, no citation, no name as an authority, from that work.

Every author or compiler of a Dictionary, after having completed his work, must feel, that should he prepare a new edition,

he could make many improvements ; and subsequently to the publication of the " Universal Dictionary," the attention of the author was directed to improving and enlarging it. After having performed a good deal of labor with this object in view, he was induced to change his plan, and undertake the preparation of a work on a much more extended scale, with the hope that he might make a Dictionary more useful and more acceptable to the public. In accomplishing this design, he has availed himself of the aid of the following collaborators, or assistants, namely, Messrs. RICHARD SOULE, JR., WILLIAM A. WHEELER, LOOMIS J. CAMPBELL, WILLIAM P. DREW, and JOHN S. DWIGHT, who have afforded great assistance in the preparation of the work. Mr. JOSEPH HALE ABBOT, besides performing considerable labor of revision, prepared the definitions of technical words and phrases in the various branches of Natural Philosophy, Astronomy, Mathematics, Chemistry, Mineralogy, Geology, and Botany, in the letter *I*, and, — with some exceptions, chiefly in Botany, — from the word *Polarity* to the end of the Dictionary. The author would also express his acknowledgments to Professors FELTON, AGASSIZ, GRAY, LOVERING, HORSFORD, ELIOT, Mr. CHARLES FOLSOM, and Mr. HENRY JAMES CLARK, of Cambridge, for their revisions, and for many valuable suggestions in relation to the words and terms used in the various departments of literature and science, in which they have so honorably distinguished themselves, and to all others who have contributed to the improvement of the work.

It will be apparent to any one who may examine this Dictionary that a great deal of labor has been bestowed upon it in order to bring it to its present state ; and it is believed that it will carry with it evidence of much pains having been taken to make it both correct and useful ; but no amount of labor, research, and care can render such a work free from errors and defects. The best authorities that can be had differ, in many cases, from each other ; and they will sometimes inevitably lead astray.

It has been the special purpose of the author, in the preparation of this work, to perform it in a manner that would afford no ground of reasonable complaint, or give any just cause of offence to any one ; and that its moral influence, so far as such a work may have any, should be unexceptionable. It was not undertaken with the expectation of receiving any thing like an ample pecuniary compensation for the labor. But time spent in a useful employment, however humble, passes more pleasantly than time wasted in idleness ; and if this Dictionary shall be found to be a work of utility in any considerable degree proportioned to the labor bestowed upon it ; if, instead of tending to corrupt the language, it shall conduce to preserve and promote its purity and correctness ; and if it shall give satisfaction to those who have manifested an interest in it, or have, in any way, befriended it, the author will feel that he has no reason to regret having performed the labor. He has reason to be gratified with the reception which his former labors in lexicography have generally met with from the public ; and he now dismisses this book with the expectation that it will receive an equitable judgment, and with the hope that this last attempt to produce a useful work, in this department of literature, will not be found wholly unsuccessful.

BIOGRAPHICAL SKETCH

OF

JOSEPH EMERSON WORCESTER,

JOSEPH EMERSON WORCESTER was born in Bedford, N.H., Aug. 24, 1784; and died in Cambridge, Mass., after a brief illness, Oct. 27, 1865. His youth was passed in agricultural labor; but he early showed a strong love of knowledge, and embraced every opportunity for self-improvement which came within his reach with the resolute energy and quiet perseverance which were marked traits in his character through life. It was not till he became of age that he determined to obtain a liberal education; and he carried his purpose into effect, not without difficulties and discouragements to which a weaker nature would have yielded, — entering Yale College in 1809, and graduating in 1811. After leaving college, he was employed for several years as a teacher of youth, in Salem, Mass. Here his literary labors began, which were for some years confined to the department of geography. His first work, “A Geographical Dictionary, or Universal Gazetteer, Ancient and Modern,” was published at Andover, Mass., in two volumes 8vo, in 1817. A new edition, greatly enlarged and improved, appeared in 1823. This was followed by “A Gazetteer of the United States,” published in 1818. In 1819, he removed to Cambridge, which became his place of residence during the remainder of his life. In the same year, he published his “Elements of Geography, Ancient and Modern,” — a work received at once with great favor by the public, and which has passed through several stereotype editions. This was followed by his “Sketches of the Earth and its Inhabitants,” which was published in 1823. His “Elements of History, Ancient and Modern, accompanied by an Historical Atlas,” appeared in 1826, and has been very extensively used as a text-book all over the country. All the above works were distinguished by conscientious accuracy and fulness of statement, and a simple and condensed style; and their merits were recognized by a popularity at once immediate and enduring. In 1825, he communicated to the American Academy a paper entitled “Remarks on Longevity and the Expectation of Life in the United States, relating more particularly to the State of New Hampshire, with some Comparative Views in Relation to Foreign Countries.” This communication upon a subject congenial to his habits of quiet research was published in the first volume of the second series of the Memoirs of the Academy.

Dr. Worcester's first production in the department of lexicography was an edition of “Johnson's Dictionary, as improved by Todd and abridged by Chalmers, with Walker's Pronouncing Dictionary, combined,” which appeared in 1828. In 1829, he was induced by the publisher of Dr. Webster's large American Dictionary, reluctantly, and not until the persuasive powers of the publisher, to use his own expression, had been “severely taxed in securing the desired result,” to prepare an abridgment of the work. Subsequent events vindicated his instinctive disinclination to the task, and caused him to regret that he had not persevered in his original refusal to undertake it. His own “Comprehensive Pronouncing and Explanatory English Dictionary” appeared in 1830. The substantial merits of this work, in addition to its copious vocabulary, immediately secured for it an extensive sale.

At the close of the year 1831, Dr. Worcester sought relaxation, after his long and arduous labors, in a voyage to Europe, where he remained for several months, visiting the most interesting places in England, Scotland, France, Holland, and Germany, and collecting books in the departments of philology and lexicography. He recorded his impressions of what he saw in a journal, which still remains in manuscript, and is marked by accurate observation, unprejudiced good sense, and sound moral feeling. Upon his return home, he assumed the editorship of the “American Almanac,” a work which he conducted for eleven years with characteristic industry and fidelity. In 1846, appeared his “Universal and Critical Dictionary of the English Language,” upon which he had been for many years engaged. The work was republished in London by an unscrupulous publisher, with a garbled and mutilated preface, and the false title of “A Universal Critical and Pronouncing Dictionary of the English Language, compiled from the materials of Noah Webster, LL.D., by Joseph E. Worcester.” Dr. Worcester, always disinclined to assail others or vindicate

himself, could not, however, allow so gross a literary fraud to pass unnoticed; and he repelled the charge involved in the titlepage, in a pamphlet published in 1853, and republished, with additions, in 1855. In 1847, Dr. Worcester was threatened with a loss of the precious sense of sight. His eyes yielded to the strain of long and uninterrupted intellectual toil, and for two years they were entirely useless to him for all purposes of investigation and research. During this period, three operations for cataract were performed on the right eye, and two on the left, the last of which was happily successful. This trial, so severe to a man of his studious tastes and retired habits, whose whole life and energies were devoted to unambitious literary toil, was borne by him with that gentle patience which was not more the result of an equable temperament than of a deep-seated religious faith, and an entire submission to the will of God.

In 1847, he published an enlarged and improved edition of his *Comprehensive Dictionary*. This was still further enlarged and improved in 1849; and in 1855 it appeared with the title, “*A Pronouncing, Explanatory, and Synonymous Dictionary of the English Language.*”

The most elaborate and important of Dr. Worcester’s literary labors, that to which all his previous works in the department of lexicography had been more or less preparatory and introductory, was his “*Dictionary of the English Language,*” originally published in 1860. In the preparation of this work, especially in the explanation of technical terms, the author was aided by many able assistants; and, so far as he himself was concerned, it presented the ripe results of many years of patient and conscientious research, shaped by unerring judgment and uniform good taste. This is not the place to set forth the excellences of this work, still less to make any comparison between its claims and those of other productions of the same class: it is enough to say that it was received by the public with a favor which more than met Dr. Worcester’s modest expectations, and that the numerous expressions of approval which it called forth from men eminent in literature and philology, both in England and America, gave him the highest satisfaction which an author can enjoy, — the assurance that his labors had been appreciated by competent judges.

From a Memoir of Dr. Worcester by Mr. Ezra Abbot of Cambridge, read before the American Academy, we transcribe a few sentences containing an estimate of his labors, which time will not fail to confirm: —

“All the works of Dr. Worcester give evidence of sound judgment and good taste, combined with indefatigable industry, and a conscientious solicitude for accuracy in the statement of facts. The tendency of his mind was practical rather than speculative. As a lexicographer, he did not undertake to reform long-established anomalies in the English language: his aim was rather to preserve it from corruption; and his works have certainly contributed much to that end. In respect both to orthography and pronunciation, he took great pains to ascertain the best usage; and perhaps there is no lexicographer whose judgment respecting these matters in doubtful cases deserves higher consideration. In the mazy paths of etymology, if he cannot claim the merit of an original explorer, his good sense preserved him from the wild aberrations and extravagances into which many have been misled.”

Dr. Worcester was a member of the Massachusetts Historical Society, of the American Academy, and of the American Oriental Society; and he was an Honorary Corresponding Member of the Royal Geographical Society of London. He received the degree of Doctor of Laws from Brown University, and also from Dartmouth College.

Dr. Worcester’s life, passed in unbroken literary toil, leaves few events for a biographer to record. Though his manners were reserved and his habits retiring, his affections were strong; and benevolence was an ever-active principle in his nature. He was grave in exterior, but neither cold nor hard in feeling. He was a stranger to the impulses of passion and the sting of ambition. His life was tranquil, happy, and useful. A love of truth and a strong sense of duty were leading traits in his character. Little known, except by name, to the general public, he was honored and loved by that small circle of relatives and friends who had constant opportunities of learning the warmth of his affections and the strength of his virtues.

Dr. Worcester married, June 29, 1841, Amy Elizabeth, daughter of the Rev. Joseph McKean, D.D., late Boylston Professor of Rhetoric and Oratory in Harvard University. He leaves a widow, but no children.

REMARKS ON THE KEY.

1. The words which are used in the preceding Key as examples for illustrating the several sounds, exhibit accurately, when pronounced by correct speakers, the different sounds of the respective letters. Some distinctions are here made which are not found in other systems of notation; they are, however, not intended to introduce any new sounds, but merely to discriminate such as are now heard from all who speak the language with propriety.

2. When the marks of pronunciation are affixed to words in their

proper orthography, in this Dictionary, without respelling them, the vowels which are not marked are silent:—thus, *a* in *beat*, *hear*; *e* in *able*, *give*, *harder*; *i* in *pain*, *heifer*; *o* in *mason*, *famous*; *u* in *though*; and *w* in *follow*, are not sounded. — To this rule there is an exception with respect to the first vowel in those proper diphthongs which are called *semi-consonant diphthongs*, as in *ocean*, *nation*, *assuage*. (See No. 28, page xv.)

3. The system of notation which is here used, while it makes a

very exact discrimination of the different sounds of the letters, will be readily understood and easily applied to practice; and it will also be much more easily remembered than a system in which the vowels are marked with figures. By applying the marks to the letters of the words in their proper orthography, the necessity of respelling most of them has been avoided; and in this way considerable space has been saved, while the pronunciation is fixed with as much exactness as if the spelling of every word had been repeated.

4. It is an advantage of this method of notation, that it distinguishes the syllables which receive a secondary accent, or are pronounced with a distinct sound of the vowels, from those which are but slightly or indistinctly sounded. A great part of the words of the English language that have more than two syllables, have more than one syllable in some degree accented, or pronounced more distinctly than the rest; yet this difference in distinctness is not made apparent by the usual modes of marking the words. In this notation, the vowels in the syllables which have either the primary or secondary

accent, have a mark placed over them, denoting a distinct sound, while those which are more feebly uttered, have a dot placed under them. Take, for example, the following words, which are thus noted: *sūn'shine*, *pā'per*, *ān'ec-dōte*, *cūr-q-vūn'*, *lū'cr-ql*, *mān-i-fes-id'tion*, *ūn-dī-vīs-i-bīl'ī-ty*. In these words, it will be readily perceived that all the vowels which have a mark placed over them, have a distinct sound, or are more or less accented, while those which have a dot under them are but slightly or indistinctly sounded; and that the pronunciation is as clearly represented to the eye in their proper orthography, as it is, in other methods of notation, by respelling the words.

5. There are many cases in which the vowels are pronounced with so slight a degree of distinctness, that it may be a matter of indifference whether they are marked with the distinct or indistinct sound; thus, for example, the last syllable of the words *consonant*, *difference*, *diffident*, *feebleness*, and *obvious*, might, with nearly equal propriety, have the vowel marked with a short or an indistinct sound.

SOUNDS OF THE VOWELS.

6. The *first*, or *long*, sound of each of the vowels, marked thus, *ā*, *ē*, *ī*, *ō*, *ū*, is styled its *alphabetic* or *name* sound, being the sound which is heard in naming the letter. The sound of the letter *y*, when used as a vowel, is the same as that of *i*; but as a vowel it begins no properly English word now in common use.

7. The long sound of the vowels is generally indicated, in monosyllables, by a silent *e* at the end of the word, preceded by a single consonant; as in *fate*, *mete*, *pine*, *note*, *tube*, *type*. The following words, however, are exceptions; namely, *have*, *are*, and *bad*, the preterite of *to bid*. The vowels have regularly the long sound if final in an accented syllable; as in *ba'sis*, *le'gal*, *tri'al*, *sono'rous*, *eu'bic*, *ty'rant*.

8. The *second*, or *short*, sound of the vowels is generally indicated, in monosyllables, by the absence of mute *e* at the end of the word; as in *fat*, *met*, *pin*, *not*, *tub*, *hyp*. It is also the usual sound of a vowel in an accented syllable which ends with a consonant; as in *aban'don*, *atten'tive*, *exhib'it*, *lacon'ic*, *reluctant*, *lyr'ical*.

9. The *fourth* sound of the vowels, *a*, *e*, *i*, *o*, and *u*, and the *third* sound of *y*, (called, with respect to *e*, *i*, *u*, and *y*, *short and obtuse*), marked thus, *ä*, *ë*, *î*, *ö*, *û*, *ÿ*, are the *short* sounds of these several vowels when followed by *r* in a monosyllable or in an accented syllable; as, *far*, *hard*; *her*, *herd*; *far*, *fürkin*; *normal*, *north*; *fur*, *burden*; *myrrh*, *myrtle*: but when the succeeding syllable begins with *r*, or the sound of *r*, as in *perry*, *perry*, the vowel has the proper short sound. Some orthoepists make no distinction between the sound indicated by this mark and the proper short sound of these vowels; others make a distinction in relation to a part of them only. The vowels having this mark are pronounced with as short a sound as they can readily receive when thus situated. The peculiar character of this sound, which distinguishes it from the proper short sound of the vowels, is caused by the letter *r*; and this letter, thus situated, has an influence peculiar to itself on the sound of all the vowels. The difference between the sound of the vowels when thus situated, and their proper short sound, will be readily perceived by the following examples: *mān*, *mārrōw*; *mār*, *mārket*; — *mēn*, *merry*; *hēr*, *mērchānt*; — *fūn*, *mīrror*; *fūr*, *cīrcle*; — *nōt*, *bōrrōw*; *nör*, *börder*; — *tūn*, *hūr-ry*; *fūr*, *hūrde*. There is little or no difference in the sounds of the vowels *e*, *i*, *u*, and *y*, when under this mark; as, *hēr*, *fūr*, *mērrh*; but their proper short sounds are widely different from each other, when they are followed by the sound of *r*, or by other consonants;

as in *merry*, *peril*, *mirror*, *hurry*. — See remarks on the sound of the letter *R*, page xviii.

10. Vowels marked with the dot underneath, thus, *a*, *e*, *i*, *o*, *u*, *y*, are found only in syllables which are not accented, and over which the organs of speech pass slightly and hastily in pronouncing the words in which they are found. It is to be observed that this mark is employed to indicate a *slight stress of voice* in uttering the appropriate sound of the vowel, rather than to note any particular quality of sound. If the syllables on which the primary and secondary accents fall, are uttered with a proper stress of voice, these comparatively indistinct syllables will naturally be pronounced right. In a majority of cases, this mark may be regarded as indicating an indistinct *short* sound of the vowel; as in *tengle*, *mental*, *travel*, *peril*, *idyl*, *forum*, *carry*; but in many cases it indicates a slight or unaccented *long* sound; as in *carbonate*, *sulphate*, *emerge*, *obey*, *ebony*, *follower*, *duplicity*, *educate*, *regulate*, *congratulate*. The letter *u*, in the last three words, is pronounced like *yu* slightly articulated. The vowels with this mark have, in some situations, particularly in the last syllable of words ending with *r*, no perceptible difference of sound; as in *frigor*, *speaker*, *nadir*, *actor*, *sulphur*, *zephyr*. As Mr. Smart justly remarks, "the last syllables of *robber*, *nadir*, *author*, *sulphur*, and *satyr*, are quite undistinguishable in pronunciation."

A, unaccented, at the end of a word, approaches the Italian sound of *a* in father; as in the words *algebra*, *comma*, *idea*; and *ah*, final, partakes still more of the Italian sound, as in *Jehovah*, *Messiah*.*

* With respect to the sound given to the letter *a* in unaccented syllables, there is a great diversity among orthoepists. For example, to *a* in *courage*, Sheridan, Walker, and Jones give the short sound of *i*; Jameson and Smart, the sound of long *a*; — to *a* in *delicate*, Walker gives the sound of short *a*, Jameson and Smart, of long *a*; Sheridan and Jones, of short *e*; — to *a* in *furnace*, Sheridan and Walker give the sound of short *i*; Jones and Jameson, of short *a*; Smart, of long *a*. *A* at the end of words is marked by Sheridan, Walker, Jones, Jameson, and various other orthoepists with its short sound; as in *algebra*, *comma*, *idea*; but by Smart, it is marked with the Italian sound as an "unaccented vowel;" *algebra*. — Walker says, "We cannot give it [a] any of its three open sounds without hurting the ear. Thus, in pronouncing the words *abound* and *diadem*, *ay-bound*, *ah-bound*, and *aw-bound*; *di-ay-dem*, *di-ah-dem*, and *di-aw-dem*, are all improper; but giving the *a* the second or Italian sound, as *ah-bound* and *di-ah-dem*, seems the least so. For which reason, I have, like Mr. Sheridan, adopted the short sound of this letter to mark the unaccented *a*; but if the unaccented *a* be final, it then seems to approach still nearer to the Italian *a* in the last syllable of *papa*, and to the *a* in *father*: as may be heard in the deliberate pronunciation of the words *idea*, *Africa*, *Della*," &c.

For further illustration and explanation of the use of this mark (.), see the Table

A

11. The *third* sound of the letter *a*, marked thus *ä*, is its *long* sound qualified by being followed by the letter *r*; as in *care, fure, pare*. The diphthong *ai*, followed by *r*, has precisely the same sound, as in *fair, pair*; so also, in some cases, has the diphthong *ea*, as in *bear, pear*. This sound of the letter *a* is the same as that of the letter *e* in *heir, there, where*. There is obviously a difference between the sound of *a* in these words, as they are pronounced by good speakers, and its sound in *pain* and *fate*. There is the same difference between the sound of *a* in the word *pair*, and its sound in the word *payer*, one who pays; also in the word *prayer*, a petition, and in the word *prayer*, one who prays.

12. The *fifth* sound of *a*, marked thus *ä*, is an *intermediate* sound of this letter, between its short sound, as in *fat, man*, and its Italian sound, as in *far, father*:—this sound being somewhat shorter than the Italian sound of *a*. With respect to the class of words which, in this Dictionary, have this mark, there is much diversity among orthoepists. Most of these words are marked by Nares, Jones, and Perry with the Italian sound of *a*, as in *far* and *father*; but Walker, Jameson, Smart, Reid, and Craig mark them, or most of them, with the short sound, as *a* in *fit, min*; Fulton and Knight mark them as being intermediate between the short and the Italian sound; and Smart, though he gives to *a* in most of these words the short mark, says, in relation to it, “that when *a* is followed by *f, s, or n*, there is, in many words, a disposition to broadness in the vowel, not quite in unison with the mode of indication, as may be perceived in an unaffected pronunciation of *grass, graft, command*. This broadness is a decided vulgarism, when it identifies the sound with *ä*. The exact sound lies between the one indicated and the vulgar corruption.”

The following list includes a considerable part of the class of words in which, in this Dictionary, *a* is marked thus *ä*; and in which, according to Nares, Jones, and Perry, *a* has the Italian sound, as in *father*; according to Walker, Jameson, Reid, and Craig, the *short* sound of *a*, as in *fat, man*; and according to Fulton and Knight, an *intermediate* sound between these two sounds. This intermediate sound, marked thus *ä*, is in accordance with the remark of that excellent orthoepist, Mr. Smart, who says, that when this sound is identified with the Italian sound of *ä*, “it is a decided *vulgarism*.”

on page xxiii., which exhibits the manner in which the pronunciation of a number of words is represented by several orthoepists, and the remarks in the paragraph numbered 141.

There is a considerable number of words in which *a* has the sound of short *o*, as in *not*, called by Walker “the short sound of broad *a*.” This sound occurs chiefly in words in which *a* is preceded by *qu, w, or wh*; as, *quadrangle* (quödrrangle), *quality* (quöility), *swallow* (swöllow), *wad* (wöd), *wan* (wön), *what* (whöt); also, *scallop* (scöllop), *chaps* (chöps).

E.

13. The letter *e* has, in several words, the same sound as *a* in *fare*; as in *heir, there, where*; but *were* is properly pronounced *wēr*. In *clerk* and *sergeant*, it has, according to all the English orthoepists, the sound of *a* in *dark* and *margin*; yet in this country it is not uncommon to pronounce these words, more in accordance with their orthography, *clerk* and *sergeant*.

14. When *e* precedes *l* or *n* in an unaccented final syllable, in some words it has an indistinct short sound, and in some it is entirely suppressed. In most of the words ending in *el*, the *e* is *sounded*; as, *flannel, travel, vessel*, &c. The following words are exceptions, and in these the sound of *e* before *l* is suppressed: *drivel, grovel, hazel, mantel, navel, ousel, ravel, rivel, shekel, shovel, shrivel, snivel, weasel*.

In most of the words ending in *en*, the sound of *e* is *suppressed*; as, *harden, heaven, often*, &c. The following words are exceptions: *abdomen, acumen, aspen, bitumen, catechumen, cerumen, chicken, flamen, hymen, hyphen, kitchen, latten, legumen, linen, marten, mitten, mynchen, omen, patten, platen, pollen, regimen, siren, sloven, specimen, sudden, ticken, woollen, women*.

15. The sound of the letter *e* is generally suppressed in the preterites of verbs, and in participles in *ed*, when the *e* is not preceded by *d* or *t*; as, *feared, praised, admired, tossed, suppressed*, pronounced *feard, praisd, admird, tost, suppressd*. But adjectives ending in *ed*, unless they are participles as well as adjectives, commonly preserve the sound of *e* before *d*, as in *naked, ragged, striped, wicked, wretched*, &c. In the following words, *beloved, blessed, cursed, learned, picked*, and *winged*, the sound *e* before *d* is suppressed when the words are used as verbs or participles, and it is sounded when they are used as adjectives; as, He was much *beloved*; he *blessed* the occasion; he *cursed* the day; he *learned* to read; he *picked* his men; he *winged* his flight:—A *belov'ed* son; a *bless'ed* day; a *curs'ed* thing; a *learn'ed* man; a *pick'ed* point; a *wing'ed* fowl.—*Picked*, however, used as a participial adjective, in the sense of selected, as “*picked men*,” is pronounced in one syllable.

I.

16. The long sound of the letter *i* is heard not only in monosyllables ending with a mute *e*, as in *file, time*, &c., but also in the word *pint*, and in the words *child, mild, wild*; also in *bind, blind, find, hind, kind, mind, rind*, &c.

17. There is a class of words, mostly derived from the French and Italian languages, in which *i* retains the sound of long *e*; as *ambergris, antique, unique, bombazine, Brazil, capivi, capuchin, caprice, chagrin, chevaux-de-frise, critique, frize, gabardine, haberdine, quarantine, ravine, routine, fascine, fatigue, intrigue, invalid, machine, magazine, marine, palanquin, pique, police, recitative, tabourine, tambourine, tontine, transmarine, ultramarine, verdigris*. In the word *shire*, *i* commonly has the same sound; and some orthoepists also give it the same in *oblige* and *oblique*.

18. In words which terminate in *ile* and *ine*, with the accent on the penultimate syllable, the *i* in the final syllable is generally short; as, *fertile, hostile, adamantine, intestine*, &c. The following are exceptions: *edile, exile, gentile, pentile, feline, ferine, confine*, and a few others. Also when the accent is on the antepenult, words ending in *ile* generally have the *i* short; as, *juvenile, puerile*, &c.; but it is long in *camomile, reconcile, eolipile*.

19. With respect to words ending in *ine*, and having the accent on the antepenultimate, there is much uncertainty as to the quantity of

the *i*; and, in relation to a number of such words, there is much disagreement among orthoepists; yet the general rule inclines to the long sound of *i* in the termination of this class of words. In the following words, *i*, in the last syllable, is generally pronounced long: *adulterine*, *almandine*, *armentine*, *asinine*, *belluine*, *bizantine*, *brigantine*, *cannabine*, *celandine*, *colubrine*, *columbine*, *concubine*, *countermine*, *crystalline*, *legatine*, *leonine*, *metalline*, *muscadine*, *porcupine*, *saccharine*, *saturnine*, *serpentine*, *turpentine*, *vespertine*, *vituline*. — In the following words, *i*, in the last syllable, is short: *discipline*, *feminine*, *genuine*, *heroine*, *hyaline*, *jessamine*, *libertine*, *masculine*, *medicine*, *nectarine*, *palatine*. With respect to *alkaline*, *aquiline*, *coralline*, *sapphirine*, *uterine*, *viperine*, as well as some others, the orthoepists, as well as usage, are divided. In the termination *ine* in a class of chemical words, the *i* is short; as, *fluorine*, *iodine*, *nepheline*, &c. In the termination *ite*, the *i* is sometimes short, as in *respite*, *granite*, *favorite*, *infinite*, &c.; and sometimes long, as in *expedite*, *appetite*, *satellite*, &c. In a class of gentile nouns, and appellatives formed from proper names, it is long; as, *Hivite*, *Wichifite*; also, generally, in names of minerals; as, *augite*, *steatite*, *tremolite*. In verbs which end in *ise*, the *i* is long; as, *advertise*, *exercise*, &c.; but *divertise*, *franchise*, *mortise*, *practise*, and their compounds, are exceptions; also, *promise*.

20. When *i* ends an initial syllable without the accent, and the succeeding syllable begins with a consonant, the *i* is generally short or indistinct, as if written *e*; as in *civility*, *divine*, *finance*: but the exceptions to this rule are numerous, among which are *biquadrate*, *chirography*, *biography*, *divaricate*, *librarian*, *primeval*, *tribunal*, *vitality*, and many others, in which the *i* is pronounced long. There is also a considerable number of words with regard to which there is a diversity, in relation to the pronunciation of the *i*, among orthoepists and in usage; as, *dilate*, *diverge*, *virago*, &c.

O.

21. There is a class of monosyllables ending in *f*, *ft*, *ss*, *st*, and *th*, in which *o* is marked with the short sound in most pronouncing dictionaries, though some orthoepists give it the sound of broad *a*, as in *fall*. Mr. Narces gives the sound of broad *a* to *o* in the following words (as some other orthoepists do in a part of them): *off*, *often*, *offer*, *coffee*, *scoff*, *aloft*, *loft*, *soft*, *cross*, *loss*, *toss*, *cost*, *frost*, *lost*, *tost*, *broth*, *cloth*, *froth*, *cough*, and *trough*. To these some others might, with equal propriety, be added; as, *offspring*, *dross*, *gloss*, *moss*, *moth*, *wroth*. Mr. Smart remarks, "that before *ss*, *st*, and *th*, the letter *o* is frequently sounded *aw*; as in *moss*, *gloss*, &c., *lost*, *cost*, &c., *broth*, *cloth*, &c. This practice is analogous to the broad utterance which the letter *a* [short] is liable to receive before certain consonants [see A, No. 12]; and the same remarks will apply in the present case, as to the one referred to, namely, that, though the broad sound is vulgar, there is an affectation in a palpable effort to avoid it in words where its use seems at one time to have been general. In such cases, a medium between the extremes is the practice of the best speakers." The sound of *o* is somewhat prolonged also in *gone* and *begone*, and in some words ending in *ng*; as, *long*, *along*, *prong*, *song*, *strong*, *thong*, *throng*, *wrong*.

There are a few words in which *o* has the mark of the long sound in all the pronouncing dictionaries, although it is in these words, by many, if not by most speakers in this country, somewhat shortened. Thus, we hear the sound *o*, in the words *coat*, *home*, *hope*, *spoke*, *stone*, *whole*, *wholly*, and *wholesome*, pronounced with a sound a little shorter than its proper long sound, as heard in *goat*, *note*, *dome*, *hole*, *sole*, *holy*, and *dolesome*.

22. There are some words in which *o* has the same sound as *u* in

bull, or *oo* in *good*; namely, *bosom*, *wolf*, *woman*, *Wolsey*, *Wolverhampton*. It has the sound of short *u* in *done*, *son*, &c.; and the sound of *u* as in *hurt* in *word*, *work*, *worth*, &c.

23. In many words ending in *on*, the sound of *o* is suppressed, as in *bacon*, *pardon*, *weapon*, *reason*, *cotton*, &c.

U.

24. *U*, at the beginning of words, when long, has the sound *yu*, as in *use*. — With respect to the manner of designating the sound of the vowel *u* when it comes immediately after the accent, as in the words *educate*, *nature*, *natural*, &c., there is much diversity among orthoepists. By Walker, the pronunciation of *EDUCATE* is thus noted — *éd'jū-kāt*; by Sheridan, Jones, Enfield, Fulton, and Jameson, thus — *éd'ū-kāt*; and by Perry, Knowles, Smart, and Reid, thus — *éd'ū-kāt*. *NATURE*, by Walker, thus — *nā'chūr*; by Sheridan and Jones, thus — *nā'chūr*; by Perry, Enfield, and Reid, thus — *nā'tur*; by Jameson and Knowles, thus — *nā'yūr*; by Smart, thus — *nā'tur* or *nā'ch'or*. *NATURAL*, by Walker and Jones, thus — *nā'tchūr-rāl*; by Sheridan, thus — *nā'tchūr-āl*; by Fulton, Enfield, and Jameson, thus — *nā'tū-rāl*; by Perry and Reid, thus — *nā'tū-rāl*; by Knowles, thus — *nā'yūr-āl*; by Smart, thus — *nā'tchō-rāl*.

There is a pretty large class of words with respect to which there is a similar diversity in the manner in which the pronunciation of *u* and *tu* is noted by the different orthoepists; but the difference is greater in appearance than in reality. The *u* thus situated may properly be regarded as having the slight sound of long *u*; and the sound may be noted by *yu*, slightly articulated. — Walker remarks, with respect to the pronunciation of *nature*, "There is a vulgar pronunciation of this word as if written *na'ter*, which cannot be too carefully avoided. Some critics have contended that it ought to be pronounced as if written *nate-yure*; but this pronunciation comes so near to that here adopted [*nā'chūr*], as scarcely to be distinguishable from it."

When *u* is preceded by *r* in the same syllable, it has the sound of *oo* in *fool*, and it is thus marked, as in *rūle*, *trūe*. This sound is given to *u* thus situated, by Walker, Smart, and all the other principal English orthoepists. Smart also gives nearly the same sound to *u* when preceded, in the same syllable, by *l* or *j*, as in *lute*, *ablution*, *conclude*, *June*, *jury*, &c. He remarks, "To say *lute*, *lū'cid*, *lū'natic*, with the *u* as perfect as in *cūbe*, *cū'bic*, is northern, or laboriously pedantic in effect; and the practice of good society is *lūt*, *lū'cid*, *lū'natic*, &c., avoiding, at the same time, the vulgar extreme of *lūt*, *lū'cid*, *lū'natic*," &c. He uses the apostrophe (') here to denote "a slight semi-consonant sound between *e* and *y* consonant, heard in the transition from the consonant to the vowel sound." — But it may be remarked that all the other principal English orthoepists give the sound of long *u* in words in which *u* is preceded by *l* and *j*, as *lute*, *lū'cid*, *jury*, &c. The difference between the sound of *u*, in these cases, as indicated by Smart, and that of the other English orthoepists, is not very considerable; and it would scarcely be distinguished in common speech.

In *busy* and *business*, *u* has the sound of short *i*; and in *bury*, the sound of short *e*.

Y.

25. *Y*, at the end of a word, preceded by a consonant, is commonly pronounced short and indistinct, like indistinct *e*; as, *policy*, *palpably*, *lately*, *colony*, &c. The exceptions are monosyllables; as, *by*, *cry*, *dry*, *fly*, *fry*, *sty*, *ply*, *try*, *wry*, with their compounds, *awry*, *heresy*, *whereby*, &c.: also, verbs ending in *fy*; as, *fortify*, *magnify*, *testify*, &c.: also, *ally*, *apply*, *comply*, *imply*, *supply*, *multiply*, *reply*, *occurry*, and *prophecy*; in all which it has the long sound.

SOUNDS OF THE DIPHTHONGS AND TRIPHTHONGS.

26. A diphthong is the union of two vowels, pronounced by a single impulse of the voice; as, *oi* in *voice*, *ou* in *sound*.

27. A triphthong is the union of three vowels, pronounced by a single impulse of the voice; as, *ieu* in *adieu*, *iew* in *view*.

28. A proper diphthong is one in which both vowels are sounded; as, *oi* in *voice*, *ou* in *sound*, *ow* in *now*.

The diphthongs which begin with *e*, *i*, or *u*, namely, *ea*, *eu*, *ew*, *ia*, *ie*, *io*, *ua*, *ue*, *ui*, and *uo*, differ from the rest; and they may, as Walker says, "not improperly be called *semi-consonant diphthongs*;" being pronounced as if *y* consonant was substituted in place of *e* or *i*; as, *ocean* (ose'yan), *poniard* (pon'yard), *question* (quest'yon); and as if *w* consonant were substituted in place of *u*; as, *assuage* (as-swage'), *languid* (lan'gwid), &c.

29. An improper diphthong has only one of the vowels sounded; as, *ea* in *heat*, *oa* in *coal*.

Æ.

30. This is a Latin diphthong, and is always pronounced like *e* in Latin. In English, it is used only in words of Latin origin or formation; as, *agua-vitæ*, *minutæ*, *æsthetics*; and it is commonly long, as in *pæan*, but sometimes short, as in *Dædalus*.

AI.

31. The usual sound of this diphthong is the same as long *a*; as in *pail*, *pain*, pronounced like *pale*, *pane*. The following are the principal exceptions. It has the sound of short *e* in *said* and *saith*, and in *again* and *against*; that of short *a* in *plaid* and *railery*; that of long *i* in *aisle*; and, in a final unaccented syllable, it has the obscure sound of the indistinct short *i*, as in *fountain*, *mountain*, *curtain*, &c.

AO.

32. This diphthong occurs only in the word *gaol*, pronounced, as well as very often written, *jail*.

AU.

33. The common sound of this diphthong is the same as that of broad *a*, or *au*, — *caul* and *haul* being pronounced exactly like *call* and *hall*. But when these letters are followed by *n* and another consonant, the sound is changed, in a number of words, to that of the Italian *a* in *far* and *farther*; as, by most of the orthoepists, in the following words: *avunt*, *craunch*, *davunt*, *flavunt*, *gaunt*, *gauntlet*, *haunch*, *havunt*, *javunt*, *jaundice*, *laugh*, *launch*, *laundress*, *laundry*, *maund*, *paunch*, *saunter*, *staunch*. Some orthoepists pronounce a part of these words with the sound of broad *a*, as most of them do the word *vaunt*, and many of them, the word *taunt*. In the word *draught*, this diphthong has, according to some orthoepists, the sound of *a* in

far, and according to some, the short sound of *a* in *fat*; in *gauge*, the sound of long *a* (as in *page*); in *hautboy*, the sound of long *o*; and in *cauliflower*, *laudanum*, and *laurel*, it is, by some orthoepists, pronounced with the sound of short *o*, and by others with the sound of broad *a*; as, *côl'iflower* or *câul'iflower*, &c.

AW.

34. This diphthong has the sound of broad *a*, — *bawl* and *ball* being pronounced exactly alike.

AY.

35. This diphthong has the sound of long *a*, as in *pay*, *hay*, &c.; except in *quay*, which is pronounced *kē*. It has the sound of short *e* in *says*; and in *Sunday*, *Monday*, &c., the last syllable is pronounced as if written *Sunda*, *Monda*, or *Sundy*, *Mondy*, &c.

EA.

36. The regular sound of this diphthong is that of long *e*, as in *beat*, *hear*, pronounced like *beet*, *here*; but there are many words in which it has the sound of short *e*; as, *head*, *dead*, *ready*, &c. In some words it has the sound of short and obtuse *e*, as in *earn*, *heard*, *pearl*, &c. In a few words it has the sound of long *a*; as in *break*, *steak*, *great*, *bear*, *bearer*, *forbear*, *forswear*, *pear*, *swear*, *tear*, *wear*. In some words it has the sound of *a* in *far*; as in *heart*, *hearten*, *heartly*, *hearth*, *hearken*; and, when unaccented, it has only an obscure sound, as in *vengeance*, *sergeant*.

The proper diphthong *ea* is found in a very few words; as, *ocean*, *cetacean*, *testacean*.

EAU.

37. This triphthong is used only in words derived from the French. In *beauty* it has the sound of long *u*; but its regular sound is that of long *o*, as in *beau*, *bureau*, *flambeau*, &c.

EE.

38. This diphthong is almost always pronounced like long *e*; the principal exceptions are *been* and *breeches*, pronounced *bēn* and *brīches*. The poetical contractions *e'er* and *ne'er*, for *ever* and *never*, are pronounced as if written *air* and *nair*.

EI.

39. This diphthong has most commonly the sound either of long *a* or of long *e*. It has the sound of long *a*, as in *deign*, *eight*, *feign*, *feint*, *freight*, *heinous*, *inweigh*, *neigh*, *neighbor*, *reindeer*, *skein*, *veil*, *vein*, *weigh*, *weight*, *heir*, *their*, &c. It has the sound of long *e* in *ceil*, *ceiling*, *conceit*, *conceive*, *deceit*, *deceive*, *inveigle*, *perceive*, *receipt*, *receive*, *seize*, *seizin*, *seignior*, *seigniorly*, *seine*; commonly also in *either*, *neither*, and *leisure*. It has the sound of long *i* in *height*, *heighten*, and *sleight*; of short *e* in *heifer* and *nonpareil*; and, in an unaccented syllable, an indistinct sound of *i*, as in *foreign*, *foreigner*, *forfeit*, *forfeiture*, *sovereign*, *sovereignty*, *surfeit*.

EO.

40. This diphthong is pronounced like long *o* in *yeoman* and *yeomanry*, and like long *e* in *people*; like short *e* in *jeopard*, *jeopardy*, *leopard*, *feoffee*, *feoffer*, *feoffment*; like broad *o* (as in *nor*) in *georgic*; like long *u* in *feod*, *feodal*, *feodary* (which are now commonly written *feud*, *feudal*, and *feudary*); and, when unaccented, it has the indistinct sound of *u*, or *o*, as in *bludgeon*, *curmudgeon*, *dudgeon*, *dungeon*, *gudgeon*, *habergeon*, *luncheon*, *punchon*, *trunchon*, *surgeon*, *sturgeon*, *scutcheon*, *escutcheon*, and the indistinct sound of *i* or *o*, as in *pigeon*, *widgeon*.

EU.

41. This diphthong is always sounded like long *u*, as in *feud*, *deuce*.

EW.

42. This diphthong is almost always sounded like long *u*, or *eu*, as in *few*, *hew*, *new*; but if *r* precedes it, it takes the sound of *oo*, or of *u* in *rule*, as in *brew*, *crew*, *drew*. In the words *shew* and *strew* (written also *show* and *strow*), this diphthong has the sound of long *o*, as it also has in the verb to *sew*, and commonly also in the word *sewer*, a drain.

EY.

43. This diphthong has the sound of long *a*, as in *bey*, *dey*, *grey*, *hey*, *prey*, *they*, *why*, *convey*, *obey*, *purvey*, *survey*, *eyre*, *eyry*. In *key* and *ley*, it has the sound of long *e*; and, when unaccented, it has the slight sound of *e*, as in *galley*, *valley*, &c.

IA.

44. This diphthong, in the terminations *ial*, *ian*, and *iard*, often forms but one syllable, the *i* being sounded like consonant *y*; as, *Christian*, *filial*, *poniard*, pronounced as if written *Christ'yan*, *fil'yal*, *pon'yard*. In some words it has the obscure sound of indistinct short *i*, as in *carriage*, *marriage*, *parliament*.

IE, IO, IEU, IEW.

45. The regular sound of the diphthong *ie* is that of long *e*, as in *chief*, *fief*, *field*, *fiend*, *grenadier*, *grief*, *grieve*, *lief*, *liege*, *mien*, *thief*, &c. It has the sound of long *i* in *die*, *hie*, *lie*, *pie*, *vie*, &c.; and the sound of short *e* in *friend*. — The diphthong *io* occurs in many words in the termination *ion*. When *i*, in this termination, is preceded by a liquid, *ion* is pronounced like *yun*, as *million*, *minion*. The terminations *sion* and *tion* are pronounced like *shun*, as *version*, *nation*; but when the *t* is preceded by *s* or *x*, *ion* is pronounced *yun*, as *question*, *mixtion*.

The triphthong *ieu* is found only in a few words, which are derived from the French, as *adieu*, *lieu*, *purlieu*; and it has the sound of long *u*. — The triphthong *iew* occurs only in *view* and *interview*.

OA.

46. The regular sound of this diphthong is that of long *o*, as in *boat*, *coat*, *coal*, *foal*, *loaf*, *moat*, &c.; but in *broad*, *abroad*, and *great*, it has the sound of broad *a*.

OE.

47. This diphthong is derived from the Latin; and it is retained in but very few words used in English. It is found in *assafœtida*, where it is pronounced like short *e*; and in *œdema*, *œsophagus*, *antœci*, also in *foetus* (often written *fetus*), in which it has the sound of long *e*.

OEU.

48. This triphthong is found only in the word *mancœuvre*, and it has the sound of *oo* in *moon*, or of *u* in *rule*.

OI, OY.

49. The sound of these diphthongs is the same; and it is noted in this Dictionary, as it is in that of Walker and in various other pronouncing dictionaries, by the combined sound of broad *o* (as in *nor*) and short *i* or *y*, as *boyl*, *boÿ*.

OO.

50. The regular sound of this diphthong is heard in *moon*, *food*, *steep*; and it is the same as that of single *o* in *move*, *prove*.

51. This diphthong has a shorter sound (the same as the sound of *u* in *bull*, or of single *o* in *wolf*) in the words ending in *oak*, as *book*, *brook*, *cook*, *crook*, *flook*, *look*, *rook*, *stook*, *took*; also in *foot*, *good*, *hood*, *stood*, *wood*, *wool*, and their compounds. Walker says, that

"*foot*, *good*, *hood*, *stood*, *understood*, *withstood*, *wood*, and *wool*, are the only words where this diphthong has this middle sound." But the rest of the words above enumerated are pronounced with the same sound of this diphthong by other orthoepists, as they are also in common usage. Smart says that the pronunciation assigned by Walker to *book* (*bôók*) "is a decided provincialism."

52. This diphthong has the sound of long *o* in *door*, *floor*, and *brooch*; and of short *u* in *blood* and *flood*.

OU.

53. This is the most irregular diphthong in the language. Its most common or regular sound is that in which both letters are heard, as in *bound*, *sound*, *cloud*, *loud*, *our*, *shout*, *south*, &c.

54. This diphthong has the sound of short *u* in *country*, *cousin*, *couple*, *accouple*, *double*, *trouble*, *southern*, *courage*, *encourage*, *flourish*, *nourish*, *nourishment*, *enough*, *chough*, *rough*, *tough*, *touch*, *touchy*, *young*, *youngster*, &c. It has the sound of *o* in *move*, or *oo* in *moon*, in *accoutre*, *aggroup*, *group*, *croup*, *bouge*, *amour*, *paramour*, *bouse*, *bousy*, *capouch*, *cartouch*, *rouge*, *soup*, *surtout*, *tour*, *contour*, *detour*, *tourney*, *tournament*, *through*, *uncouth*, *you*, *your*, *youth*, and also in various other words derived from the French. It has the sound of long *o* in *court*, *accourt*, *courtier*, *course*, *concourse*, *recourse*, *discourse*, *source*, *resource*, *four*, *fourth*, *pour*, *though*, *although*, *enough*, *mould*, *moult*, *mourn*, *shoulder*, *smoulder*, *poult*, *paultice*, *poultry*, *soul*. It has the sound of broad *a*, as in *ball*, or *a*, as in *nor*, in *bought*, *brought*, *fought*, *ought*, *nought*, *sought*, *besought*, *thought*, *wrought*. It has the sound of *u* in *bull*, or of *oo* in *good*, in *could*, *should*, *would*. It has the sound of short *o* in *hough*; also (or, according to some orthoepists, of broad *a*), in *cough* and *trough*, rhyming with *off* and *scoff*.

OW.

55. The regular sound of this diphthong, the same as the regular sound of *ou*, is heard in *how*, *now*, *down*, *town*, *tower*, &c. It has the sound of long *o* in *below*, *bestow*, *blow*, *crow*, *flow*, *flown*, *grow*, *groun*, *growth*, *glow*, *know*, *known*, *owe*, *own*, *owner*, *show*, *snore*, *sonen*, *strow*, *throw*, *thrown*; also in the following words, in some of their senses, *bow*, *low*, *lower*, *mow*, *shower*, *sow*.

56. When this diphthong forms an unaccented syllable, it has the slight sound of long *o*, as in *borrow*, *follow*, *follower*.

UA.

57. When both of the letters of this diphthong are sounded, they have the power of *wa*, as in *equal*, *language*, *persuade*, *suavity*. In some words the *u* is silent, as in *guard*, *guardian*, *guarantee*, *piquant*; and in *virtuals* and *virtualing*, both the letters are silent.

UE.

58. When these letters are united in a diphthong, and are both sounded, they have the power of *we*, as in *consuetude*, *desuetude*, *mansuetude*, *conquest*. In some words the *u* is silent, as in *guerdon*, *guess*, *guest*. When this diphthong is final, the *e* is in many words silent, as in *due*, *hue*, *pursue*, *value*, &c.; and in some words both letters are silent, as in *league*, *fatigue*, *hurangue*, *tungue*, *plague*, *vague*, *fugue*, *brogue*, *antique*, *oblique*, *decalogue*, *demagogue*, *dialogue*, &c. — In the termination *ogue*, the *o* is short when preceded by *g* or *l*; as *demagogue*, *dialogue*; except *collogue*; but when any other consonant precedes *o*, it is long; as, *brûgue*, *zûgue*, *vûgue*, *prorûgue*.

UI.

59. These letters, when they are united in a diphthong, and both are sounded, have the power of *ui*, as in *anguish*, *languid*, *vanguish*. In some words the *u* is silent, as in *guide*, *guile*, *build*, *guinea*; and in others the *i* is silent, as in *juice*, *pursuit*, *fruit*, &c.

SOUNDS OF THE CONSONANTS.

60. The consonants are divided into *mutes* and *semi-vowels*. The mutes cannot be sounded at all without the aid of a vowel. They are *b, d, k, p, t,* and *c* and *g* hard.

61. The semi-vowels have an imperfect sound of themselves. They are *f, l, m, n, r, s, v, x, z,* and *c* and *g* soft.

62. The four semi-vowels, *l, m, n,* and *r,* are also called *liquids*, because they readily unite with other consonants, flowing, as it were, into their sounds.

63. The following consonants are styled *dentals*, namely, *d, j, s, t,* *z,* and *g* soft, being pronounced chiefly by the aid of the teeth; *d, g, j, k, l, n,* and *q* are called *palatals*, from the use made of the palate in pronouncing them; *b, p, f, v,* and *m* are called *labials*, being pronounced chiefly by the lips; *m, n,* and the digraph *ng,* are called *nasals*, being sounded through the nose; and *k, q,* and *c* and *g* hard, are called *gutturals*, being sounded by the throat.

B.

64. *B,* preceded by *m* in the same syllable, is generally silent; as, *lamb, limb, comb, dumb,* &c.; but *succumb* is an exception. It is silent also before *t* in the same syllable, as in *debt, doubt, redoubt,* &c.

C.

65. This letter is hard, and sounds like *k,* before *a, o,* and *u*: and it is soft, and sounds like *s,* before *e, i,* and *y*; except in *sceptic* and *scirrhous* and their derivatives, in which it is hard, like *k.* — In the words *indict, inductor, indictable,* and *indictment,* *c* is silent.

66. When *c* comes after the accent, and is followed by *ea, ia, io,* or *ous,* it takes, like *s* and *t,* under the same circumstances, the sound of *sh*; as, *ocean, social, tenacious, cetaceous.*

In the words *discern, sacrifice,* and *suffice,* and in several words derived from them, and also in the word *sice,* *c* has the sound of *z.*

CH.

67. The regular English sound of this digraph is the same as that of *tch,* or *tsh*; as in *chair, child, rich, church.* In words from the French, the digraph *ch* has the sound of *sh,* as in *chaise, chagrin.* When it follows *l* or *n,* as in *belch, bench,* Walker and Jamieson designate its sound by *sh*; but Sheridan, Perry, Jones, Smart, &c., give it the same sound as it has in *rich.*

68. In words derived from the ancient languages, *ch* is generally hard like *k*; as in *alchemy, anarch, anarchy, anchor, anchoret, cachexy, catechism, chalcography, chalybeate, chameleon, chamomile, chaos, character, chasm, chely, chemistry, chimera, chirography, chiromancy, choler, chord, chorography, chorus, chyle, chyme, cochleary, conch, distich, echinus, echo, epoch, eunuch, hemistich, hierarch, hierarchy, machinal, machination, mechanic, mechanism, monarch, monarchical, orchestra, orchestre, pentateuch, scheme, schesis, scholar, school, stomach, stomachic,* &c. The exceptions are *charity, chart,* and *charter.* *Ch* is hard in all words in which it is followed by *l* or *r*; as, *chlorosis, Christian,* &c.

69. When *arch,* signifying *chief,* begins a word from the Greek language, and is followed by a vowel, it is pronounced *ark*; as in *archangel, architect, archive, archipelago, archetype, archiepiscopal, archidiaconal, architave, archaism, archæology*; but when *arch* is prefixed to an English word, it is pronounced so as to rhyme with *marsh*; as, *archbishop, archduke, arch-fiend.*

In *drachm, schism,* and *yacht,* *ch* is silent.

D.

70. The termination *ed,* assumed by the preterite and participle, in some words takes the sound of *d,* added to the preceding syllable; as, *healed, sealed,* pronounced *heald, seald*; and in some it takes the sound of *t,* added in the same manner; as, *distressed, mixed,* pronounced *distrest, miast.* Some words, which, when used as participles, are pronounced in one syllable, are, when used as adjectives, pronounced in two; as, *learned, blessed, winged.* (See No. 15.)

F.

71. This letter has always the same sound, except in the preposition *of,* in which it has the sound of *v.*

G.

72. *G,* like *c,* has two sounds, one hard, and the other soft. It is hard before *a, o,* and *u.* The only exception is *gaol,* which is commonly written, as well as pronounced, *jail.*

G followed by *n* at the beginning of a word is silent; as, *gnarl, gnash, gnat, gnaw, gnomon, gnomonics.* It is also silent when followed by *n* at the end of a word; as, *arraign, assign, benign, campaign, champaign, condign, deign, design, ensign, expugn, feign, foreign, impregn, impugn, malign, oppugn, reign, resign, sovereign.*

73. *G* before *e, i,* and *y,* is sometimes hard and sometimes soft. It is generally soft before words derived from the Greek, Latin, and French, and hard before words from the Saxon; and these last, being much the smaller number of the words of this sort, may be regarded as exceptions.

74. It is hard before *e* in *gear, geck, geese, geld, gelding, gelt, get, gewgaw, shagged, snagged, cragged, ragged, scragged, dogged, rugged, dagger, stagger, swagger, trigger, dogger, pettifogger, tiger, anger, eager, auger, finger, linger, conger, longer, stronger, younger, longest, strongest, youngest*; before *i,* in *gibber, gibberish, gibbous, gibcat, giddy, gift, gig, giggle, giggler, gild, gill, gimlet, gimp, gird, girdle, girl, girt, girth, gizzard, begin, give, forgive, biggin, piggin, noggin, druggist, waggish, hoggish, sluggish, rigging, digging,* &c.; before *y* in *boggy, cloggy, craggy, foggy, dreggy, jaggy, knaggy, muggy, quaggy, scraggy, shaggy, snaggy, swaggy, twiggy.*

75. The *g* in *longer* (the comparative of *long*), *stronger, younger, longest, strongest,* and *youngest* must articulate the *e*; and these words are pronounced as if written with *gg.* Thus *longer,* the comparative of *long,* is pronounced *long'ger*; and *longer,* one who longs, *long'er.* — For some remarks on the sound of *g* as connected with *n,* see No. 82.

GH.

76. In this digraph, at the beginning of a word, the *h* is silent, as in *ghost, ghastly, gherkin*; in *burgh,* *h* is silent at the end of the word; at the end of words, both letters are commonly silent, as in *high, nigh, sigh, thigh, neigh, weigh, inweigh, sleigh, bough, dough, though, although, plough, furlough, through, thorough, borough.* In some words this digraph has the sound of *f,* as in *enough, rough, tough, trough, cough, chough, laugh, laughter*; in some, the sound of *k,* as in *hough, shough, lough.* In *clough* and *slough* it is sometimes silent, and sometimes has the sound of *f.*

This combination of letters, *ough,* at the end of words, has no less

than seven different sounds, which are exhibited in the following lines, extracted from *Notes and Queries*, Vol. IV. :—

“ ’Tis not an easy task to show
How *ough* sound; since, *though*
An Irish *tough* and English *slough*,
And *cough* and *lucough*, all allow,
Differ as much as *tough* and *through*,
There seems no reason why they do.”

GIIT.

77. In this termination, the letters *gh* are always silent; as, *fight*, *right*, *height*, &c.; except in *draught*, which is pronounced, and in some of its senses usually written, *draft*.

H.

78. This letter is a note of aspiration, and it is silent at the beginning of a number of words; as, *heir*, *heiress*, *honor*, *honesty*, *honorable*, *hostler*, *hour*, &c. In *hospital*, *humble*, *humor*, *humorous*, *humorsome*, *herb*, *herbage*, &c., according to some orthoepists, it is silent, and according to others, it is sounded. It is always silent after *r*; as in *rheum*, *rhetoric*, *rhapsody*, &c.

J, K.

79. *J* has the same sound as soft *g*. *K* has the same sound as *c* hard; and it is always silent before *n*; as in *knee*, *kneel*, *know*, &c.

L.

80. *L* is silent in many words; as in *calf*, *half*, *chalk*, *talk*, *valm*, *calm*, *would*, *could*, *should*, &c.

M.

81. *M* always preserves its sound, except in *accompt*, *accomptant*, and *comptroller*, pronounced, and also more commonly written, *account*, *accountant*, and *controller*.

N.

82. *N* has two sounds, one simple and pure, as in *man*, *not*; the other compound and mixed, or nasal, called also by Walker its “ringing sound;” which is heard in *king*, *angle*, *thank*, *concord*, *banquet*, *anxious*. This sound is given to *n* in many words, when this letter precedes *k*, *c* or *g* hard, *qu*, or *x*. It is accurately expressed as it is written, when *g* follows *n* at the end of a word, as *king*, *hang*; but in other cases the sound of *g* is interposed between the *n* and the succeeding letter; as, *angle* (ang’gle), *thank* (thangk), *concord* (cong’cord), *banquet* (bang’quet). In many words in which a syllable ending with *g* hard is followed by another syllable, the sound of *g* is given to the two syllables; as, *stronger* (strong’ger), (see No. 75), *anyer* (ang’ger), *finger* (fing’ger). But in *bringer*, *hanger*, *ringer*, *singer*, *slinger*, *springer*, and *stringer*, *g* is sounded only in the first syllable.

The following is a list of most of the principal words in which, according to the best English orthoepists, the letter *n* has this mixed or ringing sound: *anchor*, *anger*, *angle*, *anguish*, *angular*, *unkle*, *anxious*, *bank*, *banquet*, *blank*, *blanket*, *brink*, *bungle*, *camerine*, *canker*, *clangor*, *concord*, *concourse*, *conger*, *congress*, *crank*, *clunk*, *clink*, *dangle*, *dank*, *drunk*, *English*, *finger*, *flank*, *function*, *fungous*, *gangrene*, *gingle*, *hank*, *hanker*, *hunger*, *ink*, *jangle*, *jingle*, *language*, *languish*, *languor*, *lank*, *linger*, *link*, *mangle*, *mingle*, *mink*, *monger*, *mongrel*, *monkey*, *pink*, *rancor*, *rank*, *rankle*, *sanguine*, *shingle*, *single*, *singular*, *sink*, *sprinkle*, *sunk*, *tangle*, *tank*, *thank*, *think*, *uncle*, *unquent*, *vanguish*, *wink*, *wrinkle*, *Yankee*, *zinc*.

It may be hardly necessary to respell most of the words of this class in order to give their pronunciation, as, in their common orthography, they are naturally pronounced correctly, with the appropriate sound of the *g*.

83. *N* is mute when it ends a syllable and is preceded by *l* or *m*; as in *kiln*, *hymn*, *limn*, *column*, *autumn*, *solemn*, *condemn*, *contemn*, &c.

P.

84. *P* is silent before *s* and *t* at the beginning of words; as in *psalm*, *psalter*, *ptisun*.

PH.

85. This digraph generally has the sound of *f*, as in *physic*, *philosophy*, &c. In *nephew* (according to all the principal English orthoepists) and in *Stephen*, it has the sound of *v*; and in *triphthong*, *naphtha*, &c., the *h* is silent.

Q.

86. *Q* is always followed by *u*, and the digraph *qu* has commonly the sound of *kw*, as in *queen*, *quill*, *quart*; but, in many words, mostly derived from the French, it has the sound of *k*, as in *coquet*, *etiquette*, *masquerade*, *mosque*, *liquor*, &c.

R.

87. The letter *r* has a jarring or trilling effect on the tongue, and is never silent. It has a peculiar influence both on the long and on the short sound of the vowels. It has the effect, under certain circumstances, to change the short sound of *a*, as in *man*, into its Italian sound, as in *far*, and the short sound of *o*, as in *not*, into its broad sound, like broad *u*, as in *nor*; and it has a corresponding effect on the short sound of the other vowels. (See page x.) When *r* is preceded by a long vowel, it has sometimes the effect of blending the syllables. Thus the monosyllables *hire*, *larc*, *more*, *roar*, *sore*, and *flour* are pronounced precisely like the dissyllables *higher*, *lower*, *mower*, *rower*, *sower*, and *flower*. These latter words, and also *bower*, *cover*, *dower*, *power*, *tower*, and some others, are regarded as dissyllables in prose, but are all commonly pronounced as monosyllables in poetry.

88. There is a difference of opinion among orthoepists respecting the letter *r*. Johnson says that “it has one constant sound in English”; and the same view of it is taken by Kenrick, Sheridan, Perry, Jones, Jameson, and Knowles. Walker, on the contrary, says, “There is a distinction in the sound of this letter scarcely ever noticed by any of our writers on the subject, which is, in my opinion, of no small importance; and that is the rough and the smooth *r*.” The following is the view given by Smart: “*R* is a decided consonant when it begins a syllable with or without another consonant, as in *ray*, *pray*; and also when it ends a syllable, if it should be so circumstanced that, ending one, it also begins the next, as in *arid*, *tarry*, *peril*, *berry*, *spirit*, *florid*, *hurry*. Here the *r* has the same effect on the previous vowel that any other consonant would have; that is to say, it stops, or renders the vowel essentially short. But, under other circumstances, final *r* is not a decided consonant; and therefore the syllables *ar*, *er*, *ir*, *or*, *ur* are not coincident, as to the vowel sound in each, with *at*, *et*, *it*, *ot*, *ut*; neither do the vowel sounds in *fare*, *mere*, *ire*, *ore*, *ure*, *poor*, *our*, quite identify with those in *fate*, *mete*, *ide*, *ode*, *cube*, *pool*, *owl*.”

S.

89. The regular or genuine sound of *s* is its sharp, sibilant, or hissing sound, like *c* soft, as in *son*, *this*. It has also a flat or soft sound (called by some its vocal sound), the same as that of the letter *z*, as in *wise*, *his*.

90. *S* has always its sharp, hissing sound at the beginning of words, as *son*, *safe*; also at the end of words when they terminate in *as*, except the words *as*, *has*, *was*, *whereas*, and the plural of nouns ending in *ea*, as *seas*, *pleas*; in all words ending in *ss*, as *less*, *express*; in all words ending in *is*, except the monosyllables *is* and *his*; in all words ending in *us*, and *ous*, as *genius*, *famous*; in all words, when it is preceded, in the same syllable, by either of the mutes *k*, *p*, *t*, or by *f*, as *locks*, *hats*, *caps*, *muffs*. In the prefix *Dis*, *s*, in some cases, has its flat, soft, or vocal sound. (See the particle *Dis* in the Dictionary.)

91. *S* final has the sound of *z* when it immediately follows any consonant, except the mutes *k*, *p*, *t*, the semi-vowel *f*, and *th* aspirated, as in *ribs*, *heads*, *hens*; also when it forms an additional syllable with *e* before it, in the plural of nouns and the third person singular of verbs, as in *churches*, *boxes*, *prices*, *charges*, *teaches*; likewise in some verbs ending in *se*, to distinguish them from nouns and adjectives of the same form, as *abuse*, *use*, *close*, *diffuse*, as distinguished from the nouns *abuse*, *use*, and the adjectives, *close*, *diffuse*. But it is impossible to give rules which will enable one to determine, in all cases, how *s* is to be pronounced, whether with its sharp, hissing sound, or its flat or soft sound, like *z*.

92. *S* aspirated, or sounding like SH or ZH. — *S* takes the sound of *sh* in words ending in *sion*, preceded by a consonant, as in *diversion*, *expulsion*, *dimension*, *passion*, *mission*, &c.; also in the following words: *censure*, *tensure*, *tonsure*, *sensual*, *fissure*, *scissure*, *pressure*, *compressure*, *impressure*, *sure*, *assure*, *insure*, *nauseate*, *nauseous*, *osseous*, *sugar*, *sumach*.

93. *S* has the sound of *zh* in the termination *sion*, preceded by a vowel, as in *evasion*, *cohesion*, *decision*, *explosion*, *contusion*, &c.; also in a number of words in which *s* is preceded by an accented vowel, and followed by the termination *ure*, as in *measure*, *pleasure*, *displeasure*, *treasure*, *rasure*, *closure*, *disclosure*, *enclosure*, *exposure*, *composure*, *incisure*, *leisure*; also in several words ending in *sier*, as *cosier*, *cosier*, *osier*, *hosier*, *rosier*, *brasier*, *grasier*; also in *ambrosia*, *ambrosial*, *elysium*, *elysian*; also in the words *abscission*, *scission*, and *rescission*.

T.

94. *T*, like *s* and *c*, is aspirated when it comes immediately after the accent, and is followed by the vowels *ia*, *ie*, or *io*, taking the sound, in these cases, of *sh*; as in *partial*, *patient*, *nation*, *partition*, *militia*, *negotiate*, *negotiable*, *negotiator*, *negotiation*, &c.

TH.

95. This digraph has two sounds; one hard, sharp, or aspirate, as in *thin*, *think*, *earth*, *breath*, &c.; the other flat, soft, or vocal, as in *this*, *the*, *then*, *breathe*, &c.

96. At the beginning of words, this digraph is generally sharp, as in *thin*, *thorn*. The exceptions are the following words, with their

compounds: *the*, *this*, *that*, *thou*, *thee*, *thy*, *thine*, *they*, *their*, *theirs*, *them*, *these*, *those*, *there*, *therefore*, *then*, *thence*, *thither*, *though*, *thus*. At the end of words it is generally sharp, as in *death*, *breath*, &c.; but at the end of some verbs it is flat, as, to *smooth*, to *mouth*, to *bequeath*; also in the following, which are written with a final *e*: to *bathe*, to *breathe*, to *clothe*, to *louthe*, to *sheathe*, to *soothe*, to *swathe*, to *wreathe*.

97. In some nouns, it is sharp in the singular, as in *bath*, *lath*, *path*, *outh*, *mouth*; and flat in the plural, as *baths*, *laths*, *paths*, *ouths*, *mouths*. In some words the *h* is silent, as in *Thomas*, *thyme*.

98. *V* has only one sound, as in *vale*, *vote*; and it is never silent, except (according to some orthoepists) in *twelvemonth*.

W, WH.

99. *W*, at the beginning of words, is a consonant. It is always silent before *r*; as, *write*, *wren*, *wrist*, &c.

The digraph *WH* is sounded as it would naturally be if the order of the letters were reversed, thus, *hw*; as, *when*, *while*, *whip*, pronounced *hwen*, *hwile*, *hwip*. In some words the *w* is silent; as, *who*, *whole*, &c.

X.

100. The regular sound of *x* is its sharp sound, like *ks*; as, *excel*, *execute*, *expect*, *tax*.

101. It has a flat or soft sound, like *gz*, when the next syllable following begins with an accented vowel, as in *exalt*, *example*, *exert*, *executor*; also in some words derived from primitives, in which it has the sound of *gz*; as, *exaltation*, *exemplary*.

102. At the beginning of words it has the sound of *z*; as in *Xenophon*, *xylography*.

103. *X* is aspirated, and takes the sound of *ksh*, in some words, when the accent immediately precedes it; as, *fluxion*, *complexion*, *anxious*, *luxury*.

Y, Z.

104. *Y*, consonant, has always the same sound. — *Z* has the same sound as flat or soft *s*. It is aspirated, taking the sound of *zh*, in a few words; as, *brazier*, *glazier*, *grazier*, *vizier*, *azure*, *razure*, *seizure*.

ACCENT.

105. All the words of the English language, of more than one syllable, have one accented syllable; and most polysyllabic words have not only a syllable with a primary accent, but also one with a secondary accent.

106. It is the general tendency of the language to place the accent on the first syllable of dissyllables, and on the antepenultimate of polysyllables. The exceptions, however, are so numerous, that this is not to be regarded as a rule, but only as a general tendency of the language. With respect, however, to verbs of two syllables, the tendency is to place the accent on the second syllable.

107. A large part of the words of the English language, especially of the polysyllables, are derived from the Latin and Greek languages, and with respect to the accent of such words, these languages have a great influence; though, in relation to many of them, the analogy of the English prevails over that of the original language.

108. Words which are adopted from the Latin language into the English without any change of orthography, generally retain the

Latin accent, especially if they are terms of the arts and sciences, or words somewhat removed from common use. The following words have the accent on the penultimate syllable, both in Latin and in English: *abdomen*, *acumen*, *asylum*, *bitumen*, *curator*, *decorum*, *delator*, *dictator*, *horizon*, *spectator*, *testator*.

109. Some words, which have the accent on the penult in Latin, are conformed to the English analogy, and have the accent on the antepenult; as, *auditor*, *character*, *cicatrix*, *orator*, *minister*, *plethora*, *senator*, *sinister*.

110. Monosyllables are generally marked, in pronouncing dictionaries, with the distinct sound of the vowels, as they are pronounced when uttered distinctly; but, in reading and speaking, many of them, especially the particles *a*, *an*, *the*, *and*, *at*, *of*, *in*, *on*, &c., are generally uttered so as to give only an indistinct or obscure sound to the vowel.

111. Simple words of two syllables have only one syllable accented, except the word *amen*, which, Walker says, "is the only word in the language which has necessarily two consecutive accents."

There are, however, many compound words of two syllables, which have both syllables more or less accented; as, *backslide, downfall, gainsay, henceforth, mankind, highway, lighthouse, sometimes, way-lay, windmill, almost, &c.*

112. Many words of three and of four syllables have only one accented syllable; as, *sensible, penalty, reliance, occurrence, republic, admirable, agreeable, celebrity, congenial, chalybeate, &c.* But some have a secondary accent almost as strong as the primary; as, *advertise, artisan, partisan, complaisant, caravan, charlatan, domineer, privateer, violin, countermand, reprimand, contraband, commodore, reprehend, benefactor, malefactor, navigator, regulator, legislator, detrimental, judicature, caricature, animadvert, &c.*

113. Almost all words of more than four syllables have both a primary and a secondary accent, and some words of seven or eight syllables have one primary and two secondary accents; as, *indivisibility, incomprehensibility.*

114. The following dissyllables, when used as nouns or adjectives, have the accent on the first syllable, and when used as verbs, on the second:—

Nouns or Adjectives.	Verbs.	Nouns or Adjectives.	Verbs.
Ab'ject	ab-ject'	Ex'ile	ex-ile'
Ab'sent	ab-sent'	Fer'ment	fer-ment'

Es'cort	es-cort'	Trans'fer	trans-fer'
Es'say	es-say'	Trans'port	trans-port'
Ex'port	ex-port'	Un'dress	un-dress'
Ex'tract	ex-tract'	Up'start	up-start'

115. Of the words in the preceding table, *cement, complot, essay, increase, perfume, permit, retail, survey, and undress*, when used as nouns, are often pronounced with the accent on the second syllable. (See these words in the Dictionary.) The words *consult, contents,*

and *detail*, as nouns, are often pronounced, in accordance with the analogy, with the accent on the first syllable.

116. The following trisyllables, and a few others, when nouns, are accented on the first syllable, and when verbs, on the third:—

Nouns.	Verbs.	Nouns.	Verbs.
Coun'tercharge	countercharge'	Coun'tervail	countervail'
Coun'tercharm	countercharm'	In'terchange	interchange'
Coun'tercheck	countercheck'	In'terdict	interdict'
Coun'termand	countermand'	O'vercharge	overcharge'
Coun'termarch	countermarch'	O'verflow	overflow'
Coun'terminate	counterminate'	O'vermarch	overmatch'
Coun'terplot	counterplot'	O'verthrow	overthrow'
Coun'terpoise	counterpoise'	O'verturn	overturn'
Coun'tersign	countersign'	Repr'imand	reprimand'

117. A similar analogy has influence in changing the accent of many other words, which are used as verbs and also as nouns or adjectives. Thus, *counterbalance* and *overbalance*, when nouns, have the accent on the first syllable, and when verbs, on the third; *attribute*, as a noun, is accented on the first syllable, and as a verb, on the second; and *misconduct*, as a noun, is accented on the second syllable, and as a verb, on the third. A class of words with the termination *ate* have the distinct sound of long *a*, when used as verbs, and the indistinct or obscure sound of *a*, when used as nouns or adjectives; of this class are *deliberate, intimate, mediate, moderate, &c.* The words *interest* and *compliment*, when used as verbs, are pronounced with a more distinct sound of short *e*, in the last syllable, than when used as nouns. The verb *to prophesy* has the full sound of long *y*; and the noun *prophecy*, the obscure sound of *y* or *e*. So the whole class of verbs ending in *fy* are pronounced with the distinct sound of long *y*.

118. The pronunciation of the following words, when used as nouns or adjectives, is different from what it is when used as verbs:—

Nouns and Adj.	Verbs.	Nouns, &c.	Verbs.
Abuse	abuse	Crease	crease
Advice	advise	House	house
Close	close	Mouse	mouse
Device	devise	Prophecy	prophecy
Diffuse	diffuse	Rise	rise
Excuse	excuse	Use	use

The following words, when used as nouns, have an accent different from their accent as adjectives:—

Nouns.	Adjectives.	Nouns.	Adjectives.
Au'gust	august'	In'stinct	instinct'
Champaign'	cham'paign	Inval'id	inval'id
Com'pact	compact'	Min'ute	minute'
Ex'ile	exile'	Su'pine	supine'
Gallant'	gal'lant		

119. All words ending in *sion* and *tion* have the accent on the penultimate syllable; as, *dissen'sion, declar'ation, medit'ation, &c.*

120. Words ending in *ia, iac, ial, ian, ous, and ious* have the accent on the preceding syllable; as, *regal'ia, denun'ciation, impe'rial, merid'ian, sponta'neous, melo'dious.* If *c, g, s, t, or x* precedes the vowels *e* or *i*, in these terminations, these vowels are generally blended with the vowel or vowels which follow, being pronounced with them in one syllable; as, *benefi'cial, magi'cian, furina'ceous, loquaci'ous, dissen'sious, coura'geous, cont'a'gious, conten'tious, am'itious.* The only exception to this rule, in relation to placing the accent, is the word *elegiac*, which is commonly pronounced *elegi'ac*, though some pronounce it, in accordance with the rule, *ele'giac.*

121. Words ending in *acal* and *ical* have the accent on the antepenultimate syllable; as, *heli'acal*, *alphabet'ical*, *funat'ical*, *geograph'ical*, *poet'ical*, &c. In words of this termination, the vowels in the accented syllables, if followed by a consonant, are short, except *u*, which is long; as, *cu'bical*, *mu'sical*, *scorbu'tical*.

122. Words ending in *ic* generally have the accent on the penultimate syllable; as, *algebra'ic*, *metal'lic*, *epidem'ic*, *scientif'ic*, *harmon'ic*, *paralyt'ic*. If a consonant immediately precedes the *i*, the vowels in the accented syllable are short, except the vowel *u*, which is long, if it is followed by a single consonant; as, *cheru'bic*, *scorbu'tic*, *sulphu'ric*, *tellu'ric*, &c. But if *u* is followed by two consonants, it is sometimes short; as, *fust'ic*, *rust'ic*; and sometimes long; as, *ru'bric*, *lu'bric*. The following words, which are exceptions to this rule, have the accent on the antepenultimate syllable: *ar'senic* (as a noun), *arith'metic*, *bish'opric*, *cath'olic*, *chol'eric*, *ephem'eric*, *her'etic*, *lu'natic*, *pol'itic*, *rhet'oric*, and *tur'neric*. The following words, *climacteric*, *empiric*, *phlegmatic*, *plethoric*, *splenetic*, according to some orthoepists, are conformed to the rule, and, according to others, they are exceptions to it. (See these words in the Dictionary.)

123. Words of three or more syllables, ending in *eal*, have their accent on the antepenultimate syllable; as, *bo'real*, *corpo'real*, *incorpo'real*, *cu'neal*, *empy'real*, *ethe'real*, *fun'e'real*, *homoge'neal*, *heteroge'neal*, *lact'enal*, *lin'eal*, *or'deal*; except *hymen'eal*, which has the penultimate accent.

124. Of words ending in *ean*, the following, being conformed to the English analogy, have the accent on the antepenultimate syllable: *cerbe'rean*, *ceru'lean*, *hyperbo'rean*, *Hercu'lean*, *marmo'rean*, *mediterr'a'nean*, *subterr'a'nean*, *Tarta'rean*; but the following are pronounced by the principal orthoepists, in accordance with the best usage, with the accent on the penultimate: *adamant'e'an*, *antipode'an*, *Atlant'e'an*, *coloss'e'an*, *empyr'e'an*, *Epicur'e'an*, *Europ'e'an*, *hymen'e'an*, *pygm'e'an*. With regard to *European*, Walker remarks as follows: "This word, according to the analogy of our own language, ought certainly to have the accent on the second syllable; and this is the pronunciation which unlettered speakers constantly adopt; but the learned, ashamed of the analogies of their own tongue, always place the accent on the third syllable, because *Europæus* has the penultimate long, and is therefore accented in Latin. *Epicurean* has the accent on the same syllable, by the same rule; while *herculean* and *cerulean* submit to English analogy, and have their accent on the second syllable, because their penultimate in Latin is short."

125. Words ending in *tude*, *efy*, *ify*, *ety*, *ity*, *graphy*, *logy*, *loquy*, *athy*, *metry*, *tomy*, *meter*, *gonal*, *fluous*, *fluent*, and *porous*, have their accent on the antepenultimate; as, *fortit'ude*, *rar'efy*, *diver'sify*, *vari'ety*, *liberal'ity*, *geog'raphy*, *geol'ogy*, *solil'oquy*, *sym'pathy*, *geom'etry*, *anat'omy*, *barom'eter*, *diag'onal*, *super'fluous*, *af'fluent*, *ovip'arous*.

126. Words of three or more syllables, ending in *ulous*, *inous*, *erous*, and *orous*, have the accent on the antepenultimate; as, *sed'u'ulous*, *volu'minous*, *voci'ferous*, *carniv'orous*; except *cano'rous* and *sono'rous*, which have the accent on the penultimate.

127. Words of three or more syllables, ending in *ative*, have the accent on the antepenultimate, or on the preceding syllable; as, *rel'ative*, *appel'lative*, *commu'nivative*, *spec'ulative*. The only exceptions are *crea'tive*, *colla'tive*, *dila'tive*.

128. Words ending in *tive*, preceded by a consonant, have the accent on the penultimate; as, *attra'ctive*, *invec'tive*, *presump'tive*; except *ad'jective* and *sub'stantive*.

129. There is a class of adjectives ending in *ose*, as, *acet'ose*, *adi'pose*, *anhe'lose*, *oper'ose*, &c., with respect to which there is much diversity among orthoepists in relation to placing the principal accent.

Walker says, "From the decided prevalence of the accent on the last syllable of these words, we may easily guess at the analogy of pronunciation, and, with very little hesitation, determine that the accent ought to be placed on the last syllable of them all." Smart, however, and some other respectable orthoepists, place the primary accent of a great part of this class of words on the first, or antepenultimate syllable. But, with respect to most of these words, the primary and secondary accents are so nearly equal, that it is of little importance whether the primary accent is placed on the last or on the first, or antepenultimate syllable; that is, whether the following words are noted thus, *ad-i-pōse'*, *an-he-lōse'*, *ōp-e-rōse'*; or thus, *ad-i-pōse*, *an-he-lōse*, *ōp-e-rōse*. A few of these words are erroneously pronounced by some orthoepists with the accent on the penultimate syllable; as, *a-cē'tose*.

130. There is a class of words ending in *or*, which, when used, in law language, in connection with their correlative terms, have the accent on the last syllable. The following words, with their correlatives, are of this class:—

Appellor	appellee	Grantor	grantee
Assignor	assignee	Guarantor	guarantee
Bargainor	bargainee	Legator	legatee
Consignor	consignee	Mortgageor	mortgagee
Devisor	devisee	Obligor	obligee
Donor	donee	Recognizor	recognizee

Some of these words, when not used in immediate connection with the correlative word, do not have the accent on the last syllable; as, *devi'sor*, *do'nor*.

The reference of one word to another, in a sentence, sometimes changes the usual seat of the accent. Thus we say, To *give* and *for'give*; we compare *prob'ability* and *plau'sibility*. "He must *in'crease*, but I must *dē'crease*."

Poets sometimes take the liberty to place the accent on a syllable on which it is not placed by common usage.

Last the bright consummate flower
Spirits *odo'rous* breathes. *Milton*.

Our nation reads the written word,
That book of life, that sure *record'*. *Watts*.

131. The following words form a class of botanical terms ending in *phyllous* (from *φύλλον*, a leaf), which are of recent introduction into the language; and in most of the pronouncing dictionaries they are not to be found.

Adenophyllous	Endecaphyllous	Hexaphyllous	Pentaphyllous
Anthophyllous	Endophyllous	Hypophyllous	Polyphyllous
Aphyllous	Epiphyllous	Macrophyllous	Quadriphyllous
Caryophyllous	Exophyllous	Microphyllous	Rhizophyllous
Coleophyllous	Gamophyllous	Monophyllous	Tetraphyllous
Decaphyllous	Heptaphyllous	Myriophyllous	Triphyllous
Diphyllous	Heterophyllous		

With respect to placing the accent, it is evident that all these words should be conformed to one rule; and that they should all have the accent either on the penultimate or the antepenultimate syllable. But with respect to the pronunciation of such of them as are found in the dictionaries, there is a great want of uniformity and consistency. With respect to words thus formed, and derived from the Greek, analogy would seem to require the accent to be placed on the penultimate syllable; but there is a strong tendency in English pronunciation to throw the accent farther back; and this tendency has prevailed, with those lexicographers who have given the pronunciation of any of these words, in the proportion of about two to one. Walker has not given any one of these words in his Pronouncing

Dictionary; but he has inserted *quadriphyllous*, in his Rhyming Dictionary, with the accent on the antepenultimate; thus, *quadriphyllous*. Smart, who is the most eminent orthoepist whose authority can be made use of in relation to any number of these words, has given the pronunciation of thirteen of them, placing the accent on the penultimate syllable of seven, and on the antepenultimate syllable of six; so that his authority is completely neutralized.

The following table exhibits the number of these words found in several of the recent dictionaries. The first column exhibits

the number of words found in each dictionary; the second, the number having the antepenultimate accent; and the third, the number having the penultimate accent.

	No. Words	Antep.	Pen.		No. Words	Antep.	Pen.
Knowles,	9	9	0	Maunder,	11	10	1
Smart,	13	6	7	Bong,	10	8	2
Craig,	16	9	7	Clarke,	14	6	8
Ogilvie,	12	6	6	Webster,	10	9	1

ORTHOEPY AND ORTHOEPISTS.

132. The pronunciation of the English language, like that of all living languages, is in a great measure arbitrary. It is exposed to the caprices of fashion and taste. It is liable to change from one age to another; and it varies, more or less, not only in the different and distantly separated countries in which it is spoken, but also in the different divisions and districts of the same country. No two speakers or orthoepists, though inhabitants of the same place, would be likely to agree in the pronunciation of all its words. The standard of pronunciation is not the authority of any dictionary, or of any orthoepist; but it is the present usage of literary and well-bred society.

133. The question may be asked, Where is this standard to be sought, or this usage to be ascertained? To this it may be answered, that London is the great metropolis of English literature, and that it has an incomparably greater influence than any other city in giving law, in relation to style and pronunciation, to the many millions who write and speak the language. The English orthoepists naturally refer to the usage of the best society in London as their principal standard; but the usage of good society in that city is not uniform, and no two orthoepists would perfectly agree with each other in attempting to exhibit it.

134. It may be further asked, How far is it proper for the people of the United States to be guided, in their pronunciation, by the usage of London? To this it may be answered, that it is advisable for American writers and speakers to conform substantially to the best models, wherever they may be found; and so long as London holds its rank as the great metropolis of the literature of the English language, so long it must have a predominant influence with respect to writing and speaking it. If the influence of the usage of London were discarded, where should we seek for a usage that would be generally acknowledged as entitled to higher authority? There is no one city in the United States which holds a corresponding rank as a centre of intelligence and fashion, — no one which is the central and undisputed metropolis of Anglo-American literature, as London is of English literature. Pronunciation in the United States is, indeed, now substantially conformed to the usage of London. The works of some of the English orthoepists, who have regarded the usage of London as their standard, have been as generally circulated and used in this country, as they have been in England; and there is, undoubtedly, a more general conformity to London usage in pronunciation throughout the United States, than there is throughout Great Britain.

135. Although it is not to be questioned, that, with respect to the many millions who speak the English language, the usage of London is entitled to far more weight than that of any other city, yet this is not the only thing to be observed. The usage of the best society in the place or district in which one resides is not to be disregarded. If our pronunciation is agreeable to the analogy of the language, and conformed to the practice of the best society with which we have

intercourse, we may have no sufficient reason to change it, though it should deviate, more or less, from the existing usage of London. A proper pronunciation is, indeed, a desirable accomplishment, and is indicative of a correct taste and a good education; still it ought to be remembered, that, in speech as in manners, he who is the most precise is often the least pleasing, and that rusticity is more excusable than affectation.

136. "For pronunciation," says Dr. Johnson, "the best general rule is to consider those as the most elegant speakers who deviate least from the written words." There are many words of which the pronunciation in England is, at present, better conformed to the spelling than it was formerly; and the principle of conformity of the manner of writing to that of speaking the language has been carried somewhat farther in the United States than in England. This is a principle which seems worthy of being encouraged, rather than checked. With respect to the want of conformity of the pronunciation of words to their orthography, Smart says, "Fortunately, the number of these anomalies is daily decreasing, so that many words, which, in Walker's Dictionary, are marked as having a customary irregular pronunciation, appear in this with their regular sounds, and yet with usage in their favor."

137. Much ingenuity and labor have been employed by various orthoepists in their efforts to settle the pronunciation of the language; and different systems of notation for designating the sounds of the letters have been adopted. But it has been found difficult to form such a system as will correctly represent all the various sounds of the letters, and not be liable to mistake; and if such a system were formed, it would be a difficult and delicate matter to make a correct application of it to all cases. The language, as it respects pronunciation, has many irregularities, which cannot be subjected to any general rules; and with regard to the pronunciation of particular words, the instances are numerous in relation to which there is a disagreement among the best orthoepists.

138. In the preparation of this work, PRONUNCIATION has been made a special object, and has received particular attention. A prominent feature in the plan consists in the exhibition of authorities respecting words of various, doubtful, or disputed pronunciation; and this work is so constructed as to exhibit, with respect to all this class of words, for which a pronouncing dictionary is chiefly wanted, the modes in which they are pronounced by all the most eminent English orthoepists. The number of primitive words respecting which the authorities are presented amounts to upwards of two thousand; and, in addition to these, the process here pursued also determines the pronunciation of a large number of derivatives. As the pronunciation of these words is regulated by usage, and as there is a great diversity, with regard to them, both among good speakers and professed orthoepists, the exhibition of the different authorities seems to be the most satisfactory method of treating them.

139. The following table exhibits the manner in which the pronunciation of a number of words is represented by Sheridan, Walker, Jones, Jameson, Knowles, and Smart, together with the mode adopted in this work. These several orthoepists have each his own peculiar system of notation; but as their different methods of marking the letters can-

not be here exhibited without much inconvenience, and without causing great confusion to the reader, their respective modes of the respelling of the words are presented; and instead of their marks on the vowels, those employed in this work are substituted, indicating, in all cases the sounds of the letters as given by them.

140. In relation to all the words here exhibited, these orthoepists agree with respect to two of the most important points in the pronunciation of words, namely, the syllable on which the accent is to be placed, and the quantity of the vowel in the *accented* syllable. Though, with regard to the modes of representing the pronunciation of most of these words, there is a considerable diversity, yet it is doubtless true that the pronunciation intended to be expressed differs, in reality, much less than it would seem to do; and that, in numerous instances, these orthoepists agreed much better in their practice than in their mode of indicating it.

141. There is an obvious difference in the quantity and in the stress of voice with which the last syllable of the words *deliberate* and *moderate* are pronounced, when verbs and when adjectives. All these orthoepists mark the *a* long in the last syllable of these words when used as verbs; Jameson and Smart also mark it long when they are adjectives; Walker shortens the *a* in the adjective *moderate*; Sheridan changes the *a* in both of the words, when adjectives, into short *e*. But there seems to be no advantage in changing the letter in such cases. It is but slightly pronounced, and has not the distinct sound of either short *e*, or short or long *a*; and, with respect to most of the instances in which the vowels in this Dictionary have a dot placed under them, they are so slightly pronounced, that to mark them with a distinct sound, either *long* or *short*, would tend rather to mislead than to assist in pronouncing them. If the syllables on which the primary and secondary accents fall, are correctly pronounced, the comparatively indistinct syllables will naturally be pronounced right.

142. With respect to words variously pronounced, Walker says, "The only method of knowing the extent of custom, in these cases, seems to be an inspection of those dictionaries which professedly treat of pronunciation. We have now so many works of this kind, that the general current of custom, with respect to the sound of words, may be collected from them with almost as much certainty as the general sense of words from Johnson. An exhibition of the opinions of orthoepists about the sound of words always appeared to me a very rational method of determining what is called custom. This method I have adopted." The method thus countenanced by Walker has been carried out in this Dictionary much more thoroughly than he had the means of doing it, inasmuch as the greater part of

the works which are made use of, as the principal authorities, have been published since his time. With respect to many of these variously pronounced words, it is difficult to decide what method is to be preferred; and it is not to be supposed that the mode for which the compiler has indicated a preference will, in all cases, be esteemed the best; but when it is not, the mode which the reader may deem preferable will be found included within the brackets, and supported by its proper authority.

143. Two modes of pronouncing a word are, in many instances, given, besides the forms included within the brackets; and alternatives of this sort would have been presented in other cases, if different modes had not been cited from respectable authorities. The compiler has not intended, in any case, to give his own sanction to a form which is not supported either by usage, the authority of orthoepists, or analogy. He has, however, in some instances, in deference to the weight of authorities, given the preference to a mode, which, in the exercise of his own judgment, independent of the authorities, he would not have preferred; for it would be unreasonable for him to make a conformity to his own taste, or to the result of his own limited observation, a law to those who may differ from him, and yet perhaps agree with the more common usage. But, though it has not been his design to make innovations, or to encourage provincial or American peculiarities, yet he has not always given the preference to the mode of pronunciation which is supported by the greatest weight of authorities cited; and, where orthoepists are divided, he has generally been inclined to countenance that mode which is most conformable to analogy or to orthography.

144. In giving the authorities for pronunciation in this Dictionary, neither the respelling nor the notation of the orthoepists cited has generally been exhibited, as it was necessary to reduce them all to one system. Their precise difference is not always presented with exactness; yet the cases of failure are not important. The different editions of the authors used as authorities differ in various instances; and it is sometimes impossible to ascertain whether the intention of the writer has not been frustrated by an error of the press.

145. The English authorities most frequently cited in this volume are Sheridan, Walker, Perry, Jones, Enfield, Fulton and Knight, Jame-

son, Knowles, Smart, Reid, Craig, and Wright, all of whom are authors of Pronouncing Dictionaries. In addition to these, various other English lexicographers and orthoepists are frequently brought forward, as Bailey, Johnson, Kenrick, Ash, Barclay, Entick, Scott, Ogilvie, Boag, Clarke, Nares, and several others, besides the distinguished American lexicographer, Dr. Webster. The edition of Webster's Dictionary made use of is that of 1841, which is the latest that was published during the life of the author.

146. The different English orthoepists, who are made use of as authorities, are entitled to very different degrees of respect. There is no one of them who has obtained a higher and more widely

extended reputation than Walker; and no one appears to have bestowed longer and more patient attention in studying the analogies of the language, and in ascertaining the best usage. But there has been considerable change since his time; and some who have succeeded him have corrected some of his mistakes, and made improvements on his system; and they may, in many cases, be considered better guides as to the present usage than Walker.

147. Of the successors of Walker, Mr. Smart appears to have given the most careful and discriminating attention to the subject; and he may therefore be regarded as the best single authority for present usage.

ORTHOGRAPHY.

REMARKS ON ORTHOGRAPHY.

BEFORE the invention of the art of printing, little attention was paid to the mode of spelling words either in the Anglo-Saxon or the English language; and the orthography of most of the words being wholly unsettled, every writer, having no guide but his own ear, was at liberty to follow his own fancy or judgment. In the writings of the Anglo-Saxons and the early English authors, almost all the words are spelt in more than one way; and for a long time subsequent to the invention of the art of printing, the orthography of the English language remained in a very unsettled state. As an illustration of this unsettled state nearly a century after this invention, it may be mentioned that in the translation of the New Testament by Tyndale, who was distinguished for talents and learning, the pronoun *it* is spelt in no less than eight different ways, as follows: *it, itt, yt, ytt, hit, hitt, hyt, hytt*; and in some cases four or five of these different modes are to be found in the same chapter.

The orthography of the language has been undergoing continual changes from the time of its first formation to the present day, although for a century or upwards it may be regarded as having assumed a comparatively settled form. If we look into books printed in the reign of Queen Anne, we meet with many words having an orthography different from that which is now in use. If we carry our observation back as far as the reign of Queen Elizabeth, we find the difference in orthography greatly increased; and when, in our retrospective examination, we reach the age of Chaucer and Wicliffe, we find many words, which, though they are words now actually in use, are so disguised in their orthographical form, and are of so odd and uncouth an appearance, that they can hardly be recognized.

The early productions of English literature which are still much read, such as the works of Bacon, Hooker, Shakespeare, and the common version of the Bible, appear now in an orthography very different from that in which they were at first printed. The first four verses of the thirty-second chapter of Deuteronomy, in the first edition of the common version of the Bible, printed in 1611, stand thus: "Giue eare, O yee heauens, and I will speake; and heare, O earth, the words of my mouth. My doctrine shall drop as the raine; my speach shall distill as the dew, as the smal raine vpon the tender herbe, and as showres vpon the grasse. Because I wil publish the Name of the Lord; ascribe yee greatnesse vnto our God. He is the rocke, his worke is perfect: for all his wayes are Iudgement. A God of trueth, and without iniquity, iust and right is he." In these few lines, which may be taken as a specimen of the whole, there are twenty-seven instances in which the words appear in an orthography different from that in which they are now printed. It is not uncommon to find the same word spelt in more ways than one on the same page, as is often the case with works even of the most distinguished writers, printed in the early ages of English literature.

It is incumbent on a lexicographer, in adjusting the orthography of the language, to have regard to etymology, analogy, and the best usage of his time; and if we examine the early English dictionaries, we shall find that the orthography is conformed to the general usage of the age in which they were published. This unsettled state of orthography has been regarded as a reproach to the language. It is an evil, however, which is unavoidable, and to which living languages generally are more or less subject. It has arisen from the want of

some fixed standard, not varying like usage; but such a standard it is in vain to seek. Some ingenious men have attempted to introduce a uniformity, and establish an invariable standard; but these attempts have been attended with little success.

Dr. Johnson says, in the Preface to his Dictionary, "In adjusting the *orthography*, which has been to this time unsettled and fortuitous, I found it necessary to distinguish those irregularities that are inherent in our tongue, and perhaps coeval with it, from others which the ignorance or negligence of later writers has produced. Every language has its anomalies, which, though inconvenient, and in themselves once unnecessary, must be tolerated among the imperfections of human things, and which required only to be registered, that they may not be increased, and ascertained, that they may not be confounded; but every language has likewise its improprieties and absurdities, which it is the duty of the lexicographer to correct and proscribe."

The Dictionary of Johnson was first published in 1755, a little more than one hundred years since; and in reference to it, Mr. Nares, in his "Elements of Orthoepey," published in 1784, remarks, "The English Dictionary appeared; and, as the weight of truth and reason is irresistible, its authority has nearly fixed the external form of our language; and from its decisions few appeals have yet been made." It will be readily admitted, that no other work ever had so great an influence on the English language as this; yet it is not possible that the work of any man, or any body of men, should so fix the external form of the language as to put a stop to further alterations. Johnson justly says, "No dictionary of a living language ever can be perfect, since, while it is hastening to publication, some words are budding, and some are falling away." And he also remarks, "The orthography which I recommend is still controvertible." It is undoubtedly true, that there never was so great an influx of new words into the English language during any century, from the time of its first formation to the time of the first publication of Johnson's Dictionary, as there has been during the century that has elapsed since that event. Various other changes have taken place in the language. Some words then obsolete have been revived, some then in use have now become obsolete, and many have changed their orthography.

In adjusting the orthography of this Dictionary, much care has been taken; in doing it, attention has been paid to etymology, analogy, and usage; and in cases in which good usage is divided, etymology and analogy have been consulted in deciding disputable points. But no innovation has been made with respect to those cases in which usage is invariable and settled.

Two of the most noted diversities, with regard to orthography, are found in the two classes of words ending in *ic* or *ick*, and in *or* or *our*; as, *music*, *public*, or *musick*, *publick*; *favor*, *honor*, or *favour*, *honour*. Johnson, in accordance with the general, though not invariable, usage of his age, wrote these words with the *k* or the *u*.

The use of the *k* in the former of these two classes of words was laid aside by many writers before the time of Johnson; and it is omitted in Martin's Dictionary, the first edition of which was published in 1749. Martin says, in his Preface, "In this respect [orthography] our dictionaries most certainly want reformation; for they all retain the old way of writing technical words with the redundant final *k* after *c*, as *logick*, *rhetorick*, *musick*, &c., which later writers have justly discarded, and

more neatly write *logic, rhetoric, music, &c.*; and accordingly they here stand in that form in this Dictionary."

In a review of Johnson's Dictionary given in the "Monthly Review," in 1755, the year in which the work was published, it is said, "Among these alterations [in orthography] may be reckoned the restoration of the *k* to many words from which modern writers have generally banished it; particularly in the terms of science, such as *conic, elliptic, optic, sudorific*, and many more of that sort; to all which Mr. Johnson adds a final *k*."—And Dr. Ash, in the Preface to his Dictionary, published in 1775, says, "The final *k*, after *c*, in words derived from the learned languages, though carefully retained by Johnson and other writers, has been omitted, in conformity with modern custom and the originals."

In the class of words referred to, the *k* is still retained in the recent editions of Johnson's Dictionary; also in the Dictionaries of Sheridan, Walker, Jameson, Richardson (his larger Dictionary), and some others; but in most of the English dictionaries which have been published since the first publication of that of Johnson, it is omitted; and Walker, although he retains it in his Dictionary, condemns the use of it, and observes, that "the omission of it is too general to be counteracted even by the authority of Johnson." The general usage is now so strongly in favor of its omission, that there is no longer any good reason for retaining it in the dictionaries. It is, however, retained in monosyllables; as, *stick, brick, lock, &c.*; and in some dissyllables; as, *hillock, hemlock, &c.* The verbs *to frolic, to mimic, to physick, to traffic*, and *to bivouac*, are written without the final *k* in the present tense; but on assuming another syllable, in forming the past tense and participles, the *k* must be used in order to keep the *c* hard; as, *trafficked, trafficking*.

The question with respect to the insertion or the omission of the letter *u* in such words as *favor, honor*, or *favour, honour*,—is attended with much more difficulty. Most of the words of this class are originally from the Latin, and are regarded as coming into the English through the French, having the termination, in that language, of *eur*; as, *faveur, honneur*; and this is the reason assigned by Johnson for retaining the *u*. But he is far from being consistent in applying the principle; for, with respect to the class of words which have the termination *or* in Latin, and *eur* in French, he gives many of them with the *u*, and many of them without it.

The following words are found in Johnson's Dictionary with the *u* in the last syllable:—

ambassadour	emperour	interiour	saviour
anterior	endeavour	labour	splendour
arbour	errour	misbehaviour	successour
ardour	favour	misdemeanour	succour
armour	fervour	neighbour	superiour
behaviour	flavour	odour	tabour
candour	fulgour	oratur	tenour
clamour	governour	ostentatour	terrou
clangour	harbour	parlour	tremour
cognisour	honour	possessour	tumour
colour	horror	rancour	valour
demeanour	humour	rigour	vapour
dishonour	inferiour	rumour	vigour
dolour	intercessour	savour	warriour

The following words are found in Johnson's Dictionary without the *u* in the last syllable:—

actor	doctor	languor	professor
antecessor	editor	lensor	protector
assessor	elector	lictor	rector
auditor	equator	liquor	sculptor
author	exccutor	manor	sectator
captor	expositor	mediator	sector
censor	exterior	mirror	senator
collector	factor	motor	senior
conductor	gladiator	pastor	stupor
confessor	inquisitor	posterior	tailor
creditor	inspector	preceptor	torpor
director	junior	predecessor	tutor

The same principle will apply to the orthography of the last syllable of most of the words in the two lists; and the inconsistency will be obvious by merely comparing the words *anterior* and *interiour* (in the former list), which are written by Johnson with the *u*, with *posterior* and *exterior* (in the latter), which are written without it.

In some of the recent abridgments of Johnson's Dictionary, the *u* is omitted in a part of the words in which he inserted it. Some of the English dictionaries which have been published since the first publication of Johnson's, scrupulously follow him in retaining the *u*; yet they do not insert it in the words in which he omitted it. Several of the English dictionaries omit it in all these words, except most of the dissyllables in the former of the preceding lists, and the following words, which are not derived from the Latin; *behaviour, demeanour, endeavour, enamour*, and the derivatives of the words from the Latin, as *disfavor, favorable, honorable, &c.* If we turn from the dictionaries to inquire what is the general usage of those who write the language, we shall find it in a very unsettled state. In the United States, it is the prevailing, though not the universal usage, to omit the *u* in all words of this class; but "in England," says Mr. Smart (1836), "such is not the practice of the day, although some years ago there was a great tendency towards it. The following, indeed, are inclined to the Latin termination, and some of them so decidedly, that to write them with *our* would incur the opinion of great singularity, if not of fault: *error, emperor, governor, warrior, superior, horror, tremor, dolor, tumor, tenor, clangor, fulgor, savor*." To these he might have added a number of others with equal propriety; yet in England it is the prevailing practice to retain the *u* in most of the dissyllables in the former of the two lists, and also in such of the other words as are not derived from the Latin. A very few writers have retained the *u* in the above enumerated words which are not of Latin origin, and omitted it in all the others.

The eye is offended at seeing a word spelt in a manner to which it is unaccustomed; and the eyes of most readers would now be offended at seeing *emperor, inferior, orator, possessor, successer*, and *error* written with the *u*; and those of many are offended by seeing *favor, honor*, and especially *senior* written without it. It is difficult to fix the limit for a partial omission; and the rule which entirely excludes the *u* from this class of words, and which is in accordance with the prevailing usage in the United States, if not the most unexceptionable, is the most convenient.

RULES OF ORTHOGRAPHY.

1. Verbs of one syllable, ending with a single consonant, preceded by a single vowel (as *plan*), and verbs of two or more syllables, ending in the same manner, and having the accent on the last syllable (as *regret*), double the final consonant of the verb on assuming an additional syllable; as, *plan, planned; regret, regretted*; — but if a diphthong precedes the last consonant (as in *join*), or the accent is not on the last syllable (as in *suffer*), the consonant is not doubled; as, *join, joined; suffer, suffered*.

There is an exception to the last clause of the preceding rule, with respect to most of the verbs ending in the letter *l*, which, on assuming an additional syllable, are allowed, by general usage, to double the *l*, though the accent is not on the last syllable; as, *travel, travelling, travelled, traveller; libel, libelling, libelled, libeller, libellous*. But the derivatives of *parallel* are written without doubling the final *l*; as, *paralleled, unparallelled*. — The nouns *petal, peril, novel, and viol*, on assuming an additional syllable, do not double the *l*; as, *petalous, perilous, novelist, violist*.

The following list comprises the verbs ending in *l*, which, though they have not the accent on the last syllable, yet commonly double the final *l* : —

apparel	dishevel	handsel	model	rival
bevel	drivel	hatchel	panel	rowel
howel	duel	imperil	parcel	shovel
cancel	embowel	jewel	pencil	shrivel
carol	enamel	kennel	peril	snivel
cavil	empanel	label	pistol	tassel
channel	equal	level	pommel	trammel
chisel	gambol	libel	quarrel	travel
counsel	gravel	marshal	ravel	tunnel
cudgel	grovel	marvel	revel	unravel

The derivatives of these verbs are spelt, in the Dictionaries of Perry and Webster, with a single *l*; and this mode is also more or less favored by the lexicographers Ash and Walker; and although it better accords with the analogy of the language, yet the prevailing usage is to double the *l*.

2. Some words, having a secondary accent on the last syllable, double the last letter on assuming an additional syllable. The verb *to kidnap* always doubles the *p* on assuming an additional syllable; as, *kidnap, kidnapped, kidnapping, kidnapper*; — also the following words; *compromit, compromised; carburet, carburetted; sulphuret, sulphuretted*; — also various compound words; as, *half-wit, half-witted; hare-lip, hare-lipped, &c.*

3. The verb *to bias* commonly doubles the *s* on assuming an additional syllable; as, *biassing, biassed, biasser*; as also the verb *to worship*, in like manner, commonly doubles the *p*; as, *worship, worshipping, worshipped, worshipper*.

4. There is some diversity in usage with respect to several other verbs ending in *p*, which, although the accent is not on the last syllable, are sometimes allowed to double the last consonant, when another syllable is added. But the more correct and regular mode is to write them without doubling the final consonant; as, *gallop, galloping*. — The derivatives of a few words ending in *t* are sometimes erroneously written with the *t* doubled; as, *benefitted*, instead of *benefited*; *combatted*, instead of *combated*.

5. Most of the words in the English language which end in *ise*, and almost all which end in *ize*, are verbs; and with regard to a number of these verbs there is a diversity in the English dictionaries,

as well as in common usage, in relation to this termination, the same verbs sometimes ending in *ize* and sometimes in *ise*. With regard to this termination, the following rule is generally, though not invariably, observed : —

Verbs derived from Greek verbs ending in *ιζω*, and others formed after the same analogy, have the termination *ize*; as, *agonize, characterize*; — but words derived from the French *prendre*, have the termination *ise*; as, *apprise, surprise, enterprise*.

The following list comprises most of the English verbs which are generally written with the termination *ise* : —

advise	compromise	emprise	misprise
advertise	demise	enfranchise	premise
affranchise	despise	enterprise	revise
apprise	devise	exercise	supervise
chastise	disfranchise	exorcise	surmise
circumcise	disguise	franchise	surprise
comprise	divertise	merchandise	

In relation to the following words, *catechise* or *catechize*, *criticise* or *criticize*, *patronise* or *patronize*, *recognise* or *recognize*, the dictionaries and usage are divided, though the most of the dictionaries give the termination *ise* to these verbs. — There are other words with regard to which there is a want of uniformity in usage; as, *civilize, disseize, epitomize, patronize, &c.*

6. There are a few verbs which are derived from nouns ending in *th* hard or sharp, as in *thin*, and which have *e* added to *th*, making the sound of *th* soft or vocal, as in *this*. Such are the following: from *bath, bathe*; from *breath, breathe*; from *cloth, clothe*; from *loath, louthe*; from *sheath, sheathe*; from *sooth, soothe*; from *swath, swathe*; from *wreath, wreath* and *inwreath*; but the following verbs are commonly written without a final *e*, viz., *to bequeath, to mouth, and to smooth*. — See *SOOTHE*.

7. Verbs ending in *ie* change the *ie* into *y*, on adding *ing*; as, *die, dying; lie, lying; tie, tying; vie, vying*.

8. Verbs ending with a single *e* omit the *e* when *ing* is added; as, *place, placing; relate, relating*.

The following words are exceptions: *dye* (to color), *dyeing; hoe, hoeing; shoe, shoeing*; — and when *ing* is added to the verbs *singe, swinge*, and *tinge*, the *e* is properly retained, as, *singeing, swingeing, and tingeing*, in order to distinguish these participles from *singing, swinging, and tinging*.

9. All verbs ending in *y*, preceded by a consonant, retain the *y* on adding *ing*; as, *spy, spying; deny, denying*; — but when *ed* is added, the *y* is changed into *i*; as, *spy, spied; deny, denied*; and when *s* is added, *y* is changed into *ie*; as, *spy, spies; deny, denies*.

10. Verbs ending in *y* preceded by another vowel, on adding *ing, ed, or s*, do not change *y* into *i*; as, *delay, delaying, delayed, delays*.

The following words are exceptions: *lay, laid; pay, paid; say, said; stay, stayed or staid*.

11. The greater part of verbal nouns end in *er*, as from *advertise, advertiser*; but many of them end in *or*, as from *imitate, imitator*; from *instruct, instructor*; and some are seen in both forms, as *visitor, visiter*. — The verbal nouns from *beg* and *lie* are irregularly formed *beggar* and *liar*. From *peddle* the regular verbal noun would be *peddler*; but the noun is commonly written *peddler*, and sometimes *pedlar*. — See *PEDLER*.

12. There is a class of words, ending in *tre*, as *centre, metre, &c.*,

which are by some written *center*, *meter*, &c.; but the former mode is supported by the prevailing usage.

13. There is a numerous class of English adjectives ending in *able* or *ible*, amounting to nearly a thousand, more than three fourths of which end in *able*. — A part of these adjectives are derived from Latin adjectives ending in *abilis* or *ibilis*; a few of them are adopted from the French; and many of them are of English growth; and these are chiefly derived from verbs, as from *allow*, *allowable*, from *move*, *movable*, sometimes from nouns, as from *action*, *actionable*, from *peace*, *peaceable*.

14. With respect to the orthography of these adjectives which are of English origin, it is difficult to give any general rule; and in some cases it is difficult to determine whether they should end in *able* or *ible*; and in a few cases usage is more or less variable; as, *addible* or *addable*, *conversable* or *conversible*, *referrible* or *referable*.

15. Latin adjectives ending in *abilis* are derived from Latin verbs of the first conjugation; as, *mutabilis*, from *muto*, *mutare*; and from adjectives with this termination in Latin, are formed English adjectives ending in *able*; as, *mutable*. — Latin adjectives ending in *ibilis* are derived from verbs of the second, third, or fourth conjugation; as, *docibilis*, from *doceo*, *docere*; *legibilis*, from *lego*, *legere*; *audibilis* from *audio*, *audire*; and from adjectives with this termination in Latin, are formed English adjectives ending in *ible*; as, *docible*, *legible*, *audible*.

16. Derivative adjectives ending in *able* are written without an *e* before *a*; as *blamable*, *movable*, not *blameable*, *moveable*; except those of which the primitive word ends in *ce* or *ge*; in such the *e* is retained to soften the preceding consonant; as, *peaceable*, *changeable*.

17. Compound words, formed by prefixing a word or a syllable to a monosyllable ending in *all*, commonly retain the double *l*; as, *appall*, *befull*, *bethrall*, *downfall*, *forestall*, *fuzzball*, *headstall*, *install*, *inthrull*, *laystall*, *miscall*, *overfall*, *recall*, *saveall*, *thumbstall*, *waterfall*, *windfull*; but some of these words are very often, if not more commonly, seen with a single *l*; as, *appal*, *befal*, *bethral*, *inthal*, &c. — *Withal*, *therewithal*, and *wherewithal* end with a single *l*.

18. A class of other compound words commonly retain the final double *l* which is found in the simple words; as, *bridewell*, *downhill*, *uphill*, *molehill*, *watermill*, *windmill*, *handmill*. — With respect to *foretel*, *enrol*, and *unrol*, or *foretell*, *enroll*, and *unroll*, the authorities and usage are divided.

19. Nouns of the singular number ending in *ey* form their plural by adding *s* only to the singular; as, *attorney*, *attorneys*; *money*, *moneys*; *valley*, *valleys*. These plurals are often erroneously written *attornies*, *monies*, and *vallies*.

20. Nouns ending in *o*, preceded by another vowel, form their plural by the addition of *s*; as, *cameo*, *cameos*; *folio*, *folios*; but if the final *o* is preceded by a consonant, the plural is commonly formed by adding *es*; as, *cargo*, *cargoes*. The following nouns, however, *canto*, *cento*, *grotto*, *junto*, *portico*, *rotundo*, *salvo*, *solo*, *tyro*, *duodecimo*, *octavo*, *quarto*, and some others, commonly have their plural formed by the addition of *s* only to the singular; as, *cantos*, *centos*. Yet, with respect to the plural of some of these words, usage is not uniform; as the plural of *quarto*, for example, is sometimes seen written *quartos*, and sometimes *quartoes*.

21. There is a class of words which have, in their derivation, a twofold origin, from the Latin and French languages, and are indifferently written with the first syllable *en* or *in*, the former being derived from the French, and the latter from the Latin. With respect to some of these, it is difficult to determine which form is best supported by usage; as, for example, *inquire* or *enquire*, *insure* or *ensure*. A few of this class of words are found in the following Vocabulary, and others are noticed in the Dictionary.

22. There is a small class of words ending in *ped*, or *pede* (L. *pes*, foot); as, *biped*, *centiped*, *milleped*, *multiped*, *palmiped*, *plumiped*, *quadruped*, *soliped*, and a few others. Of these words, *biped* and *quadruped* are always written without the final *e*, but with respect to the others, the dictionaries and usage are divided; and although it has heretofore been the more common mode to write most of these words with a final *e*, yet there seems to be no good reason why they should not all be conformed to the same rule. — See *MILLEPED*, and *SOLIPED*.

23. There is a class of chemical terms many of which signify that which contains the essence of the kind, as an extract, and which are variously written with the termination *ine* or *in*; as, *asparagine*, *chlorine*, *olivine*, or *asparagin*, *chlorin*, *olirin*; but the prevailing usage, with respect to most of these words, favors the use of the final *e*; as, *asparagine*, *chlorine*; but *tannin* is written without a final *e*.

24. The following words are generally written without an *e* after *g*; *abridgment*, *acknowledgment*, and *judgment*; though many write them with it, — *abridgement*, *acknowledgement*, and *judgement*, — as Johnson and other lexicographers spell *lodgement*. — See *JUDGMENT*.

25. In some cases, words are so variously affected by etymology, analogy, and general usage, that it is difficult to determine what orthography is best supported; as, for example, *connexion* or *conneccion*, *despatch* or *dispatch*, *hinderance* or *hindrance*, *jail* or *gaol*, *preterite* or *preterit*, *recognizance* or *recognition*, *shew* or *show*, *sceptic* or *skeptic*, *thrash* or *thresh*, and various others.

VOCABULARY OF WORDS OF DOUBTFUL OR VARIOUS ORTHOGRAPHY.

The following Vocabulary contains only a few of the words which belong to the several classes referred to in the preceding remarks; but, with the exception of these classes, it comprises nearly all the English words with regard to which a diversity of orthography is now often met with.

The orthography in the left-hand column is deemed to be well authorized, and in most cases preferable; but with respect to the

authority of that in the right-hand column, there is a great diversity. In some cases it is nearly or quite as well authorized as that on the left hand, and in some it has but a very feeble support. Both orthographies of some of the words are right, the words being differently spelt when used in different senses; as, *draught* or *drift*, *forte* or *fort*, *subtle* or *subtile*, *abetter* or *abettor*, *canvass* or *canvas*, *culiber* or *calibre*, *caster* or *castor*, *controller* or *comptroller*, &c.

ENGLISH GRAMMAR.

IN this Dictionary care has been taken to give all the irregular grammatical forms of words. All the verbs of the language which are often met with, whether regular or irregular, are conjugated; the plural forms of irregular nouns are exhibited; and occasional observations are made in relation to the grammatical construction and use of words.

It is not deemed expedient to give here any general system or outline of grammar; but the design is merely to furnish, on various topics of practical grammar, some notices and remarks, which could

not properly be introduced into the body of the Dictionary and which may facilitate the use of the work.

The parts of speech in the English language are commonly reckoned nine, or, if the participle is considered a distinct part of speech, ten; namely, the Article, Noun, Pronoun, Adjective, Verb, Participle, Adverb, Conjunction, Preposition, and Interjection. — The parts of speech which are not declinable, viz., the article, adverb, conjunction, preposition, and interjection are called *particles*.

THE ARTICLE.

The article is a word prefixed to nouns to point them out, or to limit their signification. The articles are *a*, or *an*, and *the*; as, *a*

book, *an* apple, *the* man. — For the use of the articles, see *A*, *AN*, and *THE*, in the Dictionary.

THE NOUN.

A noun, or substantive, is the name of any thing that exists, or of which we have any idea. Proper nouns are the names of individuals, whether persons or things; as, *Alexander*, *America*, *London*. Common nouns are the names of genera or classes. English common nouns are the appellatives or substantives of the English language, or are such as are contained in dictionaries of the language.

English nouns are mostly formed by affixing to the radical parts of words the terminations *an*, *ance*, *ant*, *ar*, *ard*, *art*, *ary*, *eer*, *ent*, *er*, *ier*, *ist*, *ive*, *or*, *ster*, *ate*, *ee*, *ite*, *acy*, *age*, *ancy*, *ence*, *ency*, *head*, *hood*, *ion*, *ity*, *ism*, *ment*, *mony*, *ness*, *on*, *ry*, *ship*, *t*, *th*, *tude*, *ty*, *wre*, *y*, *dom*, *cule*, *cle*, *el*, *il*, *et*, *in*, *ine*, *kin*, *let*, *ling*, *ock*, *ule*.

Nouns have three cases, *nominative*, *possessive*, and *objective*; three genders, *masculine*, *feminine*, and *neuter*; and two numbers, *singular* and *plural*.

The plural number is generally formed by adding *s* to the singular; as *book*, *books*; *dove*, *doves*. But if the singular ends in *s*, *ss*, *sh*, *ch* soft, or *x*, the plural is formed by the addition of *es*; as, *rebus*, *rebuses*; *mass*, *masses*; *lash*, *lashes*; *church*, *churches*; *fox*, *foxes*. If the singular ends in *ch* hard, the plural is formed by adding *s* only; as, *monarch*, *monarchs*. If the singular ends in *o*, preceded by another vowel, the plural is formed by the addition of *s*; as, *folio*, *folios*; *cameo*, *cameos*; *bamboo*, *bamboos*; *embryo*, *embryos*; but if the final *o* is preceded by a consonant, the plural is commonly formed by adding *es*; as, *cargo*, *cargoes*; *hero*, *heroes*. The following nouns, however, *canto*, *cento*, *grotto*, *junto*, *portico*, *rotundo*, *salvo*, *solo*, *tyro*, and some others derived from foreign languages, and hardly Anglicized, as *albino*, *domino*, &c., commonly have their plural formed by the addition of *s* only to the singular; as, *canto*, *cantos*. But there are some respecting which usage is not uniform; as, *duodecimo*, *octavo*, *quarto*, &c.

There is a class of nouns, forming the names of various arts and sciences, which have a plural termination in *ics*, but have no singular termination; as, *ethics*, *mathematics*, *mechanics*, *metaphysics*, *nune-*

monies, *politics*, &c. All nouns of this class are generally considered by grammarians as properly plural; though we sometimes see them, or some of them, joined to verbs in the singular number by respectable writers. (See MATHEMATICS.)

Nouns of the singular number ending in *y* preceded by a consonant, form their plurals by changing *y* into *ies*; as, *lady*, *ladies*; *body*, *bodies*; but those ending in *y* preceded by a vowel, form their plurals regularly, by the addition of *s* only to the singular; as, *valley*, *valleys*; *attorney*, *attorneys*, &c. These plurals are sometimes erroneously written *vallies*, *attornies*, &c.

There is a class of nouns ending in *f*, or *fe*, viz., *beef*, *calf*, *elf*, *half*, *knife*, *leaf*, *life*, *loaf*, *self*, *sheaf*, *shelf*, *wife*, *wolf*, which form their plurals by changing *f*, or *fe*, into *ves*; as, *beefs*, *calfs*, &c. The word *wharf*, according to the prevailing American usage, is conformed to this class, having for its plural *wharves*; though, according to English usage, the plural is *wharfs*. — *Staff* commonly has *staves* in the plural; but other nouns ending in *ff*, and also in *f*, except those above enumerated, form their plurals regularly, by adding *s* to the singular; as, *muff*, *muffs*; *proof*, *proofs*, &c.

There is a considerable number of words derived from the Greek and Latin languages, which are often used in English, and are more or less Anglicized, and of which the Greek and Latin plurals are sometimes used, and sometimes plurals formed according to the analogy of the English language. Of this class are *encomium*, *memorandum*, *medium*, *radius*, *dogma*, of which the Latin plurals are *encomia*, *memoranda*, *media*, *radii*, *dogmata*; the English, *encomiums*, *memorandums*, *mediums*, *radiuses*, *dogmas*. The two plurals are generally given, in this Dictionary, under such words as admit the use of both.

There are some words which have the plural form, but which are used in both the singular and the plural number, or respecting the number of which there is a want of agreement among grammarians. Of this class are *alms*, *bellows*, *gallows*, *means*, *news*, and *pains*. (See these words in the Dictionary.)

Nouns formed by the addition of *ful* (from the adjective *full*) to another word, as *mouthful*, *spoonful*, are regarded as indivisible compounds, and form their plurals in a regular manner by the addition of *s*; as, *mouthfuls*, *spoonfuls*. But some compound nouns, which have the parts of which they are compounded connected by hyphens, have the plural termination affixed to the first part; as, *aide-de-camp*, *aides-de-camp*; *cousin-german*, *cousins-german*; *court-martial*, *courts-martial*; *father-in-law*, *fathers-in-law*.

THE PRONOUN.

The different kinds of pronouns are specified in the notice of the word PRONOUN, in the Dictionary, where they are also severally enumerated and noticed. (See PRONOUN, and MINE, in the Dictionary.)

THE ADJECTIVE.

An adjective is a word added to a noun to express its quality, or limit its meaning; as, a *good* man; a *green* field; *three* apples.

A great part of the adjectives of the English language are formed by affixing to the radical parts of words the terminations *ac*, *al*, *an*, *ar*, *ary*, *en*, *ic*, *ical*, *id*, *ile*, *ine*, *ory*, *ate*, *ful*, *ose*, *ous*, *some*, *y*, *ish*, *like*, *ly*, *ive*, *able*, *ible*, *uble*, *less*.

Most adjectives have two variations from the simple or positive form of the word, called *degrees of comparison*, namely, the comparative and superlative.

In words of one syllable the comparative is commonly formed by adding *r* or *er* to the positive; as, *wise*, *wiser*; *soft*, *softer*; and the superlative, by adding *st* or *est*; as, *wise*, *wisest*; *soft*, *softest*.

Adjectives of more than one syllable are commonly compared by prefixing *more* and *most* to the positive; as, useful, *more* useful, *most* useful. — The termination *ish*, annexed to the positive, denotes a diminution of the quality; as, *black*, *blackish*.

Several adjectives form their degrees of comparison in an irregular manner. These are *good*, *bad*, *little*, *many*, *much*, *near*, *late*, and *old*. (See these words in the Dictionary.)

THE VERB.

A verb is a part of speech which signifies *to be*, *to do*, or *to suffer*; or it is a word by means of which something is affirmed respecting some person or thing; as, I *am*; you *hear*; he *is* instructed.

The person or thing respecting which any thing is affirmed, is called the *subject*. A verb in the infinitive mode is not connected with any subject, and no affirmation can be made by it.

Verbs are divided into *active* or *transitive*, and *neuter* or *intransitive*. In this Dictionary, as well as in most other modern English dictionaries, verbs to which *v. a.* is annexed are *active*, or *transitive*, verbs; and those to which *v. n.* is annexed are *neuter*, or *intransitive*, verbs.

An *active*, or *transitive*, verb expresses an action passing from an agent or actor to some object acted upon; and it requires the addition of an object to complete the sense; as, "The master *teaches* the *pupil*," or "The master *teaches* *him*." Here *pupil* and *him* denote objects acted upon, and are in the objective case, governed by the active or transitive verb *teach*.

A *neuter*, or *intransitive*, verb expresses being or state of being; and it does not require the addition of an object to complete the sense; as, "He *is*;" "The sun *shines*." — There is a class of verbs which are generally ranked among neuter verbs, and which denote action confined to the subject, without any object acted upon; as, "I *run*;" "He *walks*." These are, by some grammarians, styled *active-intransitive* verbs, in distinction from *active-transitive* verbs.

A *passive verb* is formed by associating the perfect participle of an active verb with some tense of the verb *to be*; and it implies an object acted upon, and an agent by which it is acted upon; as, "Cæsar *was slain* by Brutus."

A *regular verb* is one which forms its imperfect tense and perfect

participle by adding *d* or *ed* to the present; as, *love*, *loved*; *call*, *called*.

An *irregular verb* is one which does not form its imperfect tense and perfect participle by adding *d* or *ed* to the present; as, present *write*, imperfect *wrote*, perfect participle *written*.

All the verbs of the English language, which are often used, whether regular or irregular, are carefully conjugated, where they severally occur, in this Dictionary. It is, therefore, not deemed necessary to insert here a table of irregular verbs.

Auxiliary verbs, called also *helping verbs*, are those by means of which English verbs are principally conjugated. They are *do*, *be*, *have*, *must*, *may*, *can*, *shall*, *will*, with their inflections. *Might*, *could*, *should*, and *would*, which are regarded as the imperfect or past tenses of *may*, *can*, *shall*, and *will*, commonly imply past time; yet they are sometimes used in the conditional present and future tenses.

Many verbs are formed by affixing, to the radical parts of words, *ate*, *en*, *fy*, *ish*, *ise*, *ize*.

THE CONJUGATION OF VERBS.

The conjugation of a verb is the regular combination and arrangement of its several numbers, persons, moods, and tenses.

Grammarians differ much with respect to the number of voices, moods, and tenses in the English language. According to some grammarians there is but one voice, the active, two moods, the indicative and the infinitive, and two tenses, the present and past or preterite; according to others, there are two voices, the active and passive, four moods, and six tenses; as in the following conjugations

The auxiliary and the active verb *To Have* is conjugated in the following manner :—

TO HAVE.

Indicative Mood.

PRESENT TENSE.

Singular.

- 1st Person, I have.
2d Person, Thou hast.
3d Person, He, she, or it, hath
or has.

Plural.

1. We have.
2. Ye or you have.
3. They have.

IMPERFECT TENSE

Singular.

1. I had.
2. Thou hadst.
3. He, &c. had.

Plural.

1. We had.
2. Ye or you had.
3. They had.

PERFECT TENSE.

Singular.

1. I have had.
2. Thou hast had.
3. He has had.

Plural.

1. We have had.
2. Ye or you have had.
3. They have had.

PLUPERFECT TENSE.

Singular.

1. I had had.
2. Thou hadst had.
3. He had had.

Plural.

1. We had had.
2. Ye or you had had.
3. They had had.

FIRST FUTURE TENSE.

Singular.

1. I shall or will have.
2. Thou shalt or wilt have.
3. He shall or will have.

Plural.

1. We shall or will have.
2. Ye or you shall or will have.
3. They shall or will have.

SECOND FUTURE TENSE.

Singular.

1. I shall have had.
2. Thou wilt have had.
3. He will have had.

Plural.

1. We shall have had.
2. Ye or you will have had.
3. They will have had.

*Imperative Mood.**Singular.*

1. Let me have.
2. Have thou, or do thou have.
3. Let him have.

Plural.

1. Let us have.
2. Have ye, or do ye or you have.
3. Let them have.

Potential Mood.

Mayst and *mightst* were formerly, and they are still by some, written *mayest* and *mightest*. The second persons singular *couldst*, *shouldst*, and *wouldst*, were formerly written *couldest*, *shouldest*, and *wouldest*.

Though *might*, *could*, *should*, and *would* are preterite and past tenses, they are frequently employed to denote the present time. Their use to denote both past and present time may be illustrated as follows :—

He *should* have done this yesterday; and he *might* or he *could* have done it, if he *would*.—He *should* do it, and he *might* or he *could* do it to-day, if he *would*.

May, though of the present tense, is also sometimes used to denote the future; as, He *may* come, and probably will come, to-morrow.

PRESENT TENSE.

Singular.

1. I may or can have.
2. Thou mayst or canst have.
3. He may or can have.

Plural.

1. We may or can have.
2. Ye or you may or can have.
3. They may or can have.

IMPERFECT TENSE.

Singular.

1. I might, could, would, or should have.
2. Thou mightst, couldst, wouldst, or shouldst have.

It is very common to vary the terminations of verbs in the subjunctive mood in the same manner as in the indicative; as, "If thou *hast*, if he *has*," instead of "If thou *have*, if he *have*."—"If thou *lovest*, if he *loves*;" instead of "If thou *love*, if he *love*." So also, "If I *am*, if thou *art*, if he *is*;" if we *are*," &c., "If I *was*, if thou *wast*, if he *was*;" instead of "If I *be*," &c.

Infinitive Mood.

Present, To be loved. Perfect, To have been loved.

Participles.

Present, Being loved. Perfect, Been loved.
Compound Perfect, Having been loved.

THE PARTICIPLE.

The *participle* is, by some grammarians, considered as a distinct part of speech, and by others it is regarded only as a form of the verb. It is derived from the verb, and partakes of the signification and properties of the verb. It is an adjective form of the verb, and, like an adjective, belongs to a noun; and it signifies doing, being, or suffering, without affirming any thing. It becomes a noun by prefixing to it the definite article *the*. — There are three participles: the present, ending in *ing*, as *moving*; the perfect, past, or passive, ending (if the verb is regular) in *ed*, as *moved*; and the compound perfect, as *having moved*.

The participle in *ing*, though properly and generally active, is sometimes used in a passive sense; as, “Forty and six years was this temple *in building*.” *John* ii. 20. — “While the ark was *a preparing*.” *1 Peter* iii. 20. — “The nation had cried out loudly against the crime while it was *committing*.” *Bolingbroke*. — “My Lives *are reprinting*.” *Johnson*. — Dr. Johnson, in the Grammar prefixed to his Dictionary, remarks, with respect to this use of the present participle, “There is a manner of using the active participle which gives it a passive signification; as, ‘The Grammar is now *printing* ;’ ‘The brass is *forging*.’ This, in my opinion, is a vicious expression, probably corrupted from a phrase more pure, but now somewhat obsolete: ‘The book is *a printing* ;’ ‘The brass is *a forging* ;’ a being properly *at*, and *printing* and *forging* verbal nouns, signifying action, according to the analogy of this language.”

Although Johnson thus censured this use of the participle in *ing*, yet he afterwards made use of it himself in the instance above cited.

Within a few years, as a substitute for both of the above forms, a

neologism has been introduced, by which the *present passive participle* is substituted, in such cases as the above, for the participle in *ing*; and in the above examples, instead of “*in building*,” “*a preparing*,” “*was committing*,” and “*are reprinting*,” the modern innovators would say, “*in being built*,” “*being prepared*,” “*was being committed*,” “*are being reprinted*.” This new form has been used by some respectable writers, as in the following instances: “For those who *are being educated* in our seminaries.” *R. Southey*. — “It *was being uttered*.” *Coleridge*. — “The foundation *was being laid*.” *Brit. Critic*. — The Eclectic Review remarks, “That a need of this phrase, or an equivalent one, is felt, is sufficiently proved by the extent to which it is used by educated persons and respectable writers.”

This phrase, styled by Abp. Whately “uncouth English,” has been censured by various grammarians and critics. — “It [*τετυμμένος*] signifies properly, though in uncouth English, one who *is being beaten*.” *Abp. Whately*. — “The bridge *is being built*, and other phrases of the like kind, have pained the eye.” *D. Booth*. — “The phrase ‘*is being built*,’ and others of similar kind, have been, for a few years back, insinuating themselves into our language; still they are not English.” *M. Harrison’s Rise, Progress, and Present Structure of the English Language*. — “‘The house *is being built*.’ — This mode of expression is becoming quite common. It is liable, however, to several important objections. It appears formal and pedantic. — It has not, so far as I know, the support of any respectable grammarian. — The easy and natural expression is, ‘The house *is building*.’” *Prof. J. W. Gibbs*.

THE ADVERB.

An adverb is a word added to a verb, an adjective, and sometimes to another adverb, to express some quality or circumstance respecting it; as, “He writes *well* ;” “A *truly* excellent scholar ;” “He speaks

very correctly.” A great many adverbs are formed from adjectives by the addition of *ly*, or by changing *e* to *y*; as, *wise*, *wisely*; *noble*, *nobly*.

THE CONJUNCTION.

The conjunction is a part of speech, or a particle, which connects words and sentences together; consisting principally of two sorts,

copulative and disjunctive; but there are other divisions given by many grammarians, as adversative, causal, illative, &c.

THE INTERJECTION.

An interjection is a word used to express some affection or emotion of the mind.

THE PREPOSITION.

Prepositions show the relations between words, and are generally placed before nouns and pronouns in the objective case.

There are many nouns, adjectives, verbs, and participles, which are

followed by their appropriate prepositions; and there are instances in which it is a matter of some difficulty to determine what preposition is most suitable to be used.

ORIGIN, FORMATION, AND ETYMOLOGY OF THE ENGLISH LANGUAGE.

IN the formation of the English language, most of the languages here enumerated have contributed more or less; yet the English has been formed mainly from the Anglo-Saxon; and the contributions to it next in importance to those from the Anglo-Saxon are derived from the Latin, through the Norman French.

The family of Indo-Germanic or Indo-European languages may be considered as comprising six branches, two belonging to Asia, and four to Europe.

1. The Indian branch, comprising the Sanscrit and its derivative dialects.

2. The Medo-Persic, or Arian branch, at the head of which stands the Zend, or Old Persian.

3. The Græco-Latin branch, comprising the Greek, Modern Greek, Latin, Italian, Spanish, Portuguese, Norman French, and French.

4. The Teutonic branch, with the Gothic at its head, comprising the different Germanic dialects, the Anglo-Saxon, English, Friesic, Flemish or Belgic, Dutch, German;—the Scandinavian dialects, Icelandic, Norwegian, Danish, and Swedish.

5. The Slavonic or Slavic, comprising the Lithuanian, Russian, Polish, &c.

6. The Celtic, comprising the Welsh, Cornish, Armorican, Gaelic or Highland Scotch, Irish or Erse, and the Manks.

The translation of the four Gospels (the *Codex Argenteus*) by Ulphilas into the Gothic or Mæso-Gothic language, about A. D. 360, is regarded as the earliest specimen now in existence of any Teutonic, German, or Gothic dialect, and it preceded any known Anglo-Saxon MS. by about four hundred or five hundred years.

THE LORD'S PRAYER IN VARIOUS LANGUAGES.

The version of the Lord's Prayer [Matt. vi.] is here exhibited in all the languages which have contributed, in any considerable degree, to the formation of the English language.

GREEK.

From the text of Tischendorf, seventh edition, Leipsic, 1859, 8vo.

Πάτερ ἡμῶν ὁ ἐν τοῖς οὐρανοῖς,
ἀγιασθήτω τὸ ὄνομά σου
ἐλθέτω ἡ βασιλεία σου
γεννηθῇ τὸ θέλημά σου ὡς ἐν οὐρανῷ καὶ ἐπὶ γῆς·
τὸν ἄρτον ἡμῶν τὸν ἐπιούσιον δός ἡμῖν σήμερον·
καὶ ἄφεσις ἡμῖν τὰ ὀφειλόμενα ἡμῶν, ὡς καὶ ἡμεῖς ἀφῆκαμεν
τοῖς ὀφειλέταις ἡμῶν·
καὶ μὴ εἰσενέγκῃς ἡμᾶς εἰς πειρασμόν,
ἀλλὰ ῥῦσαι ἡμᾶς ἀπὸ τοῦ πονηροῦ.

The following is added in the "Textus Receptus":

ὅτι σοῦ ἐστὶν ἡ βασιλεία καὶ ἡ δύναμις καὶ ἡ δόξα εἰς τοὺς αἰῶνας. Ἀμήν.

MODERN GREEK, OR ROMAIC.

From the version of Maximus Kalliupolites, as published in London, 1824, 12mo. (First printed in 1638.)

ὦ πατέρ μου ὁποῦ εἶσαι εἰς τοὺς οὐρανοὺς·

ὡς ἀγιασθῇ τὸ ὄνομά σου.

ἦς ἔλθῃ ἡ βασιλεία σου·

ὡς γένηται τὸ θέλημά σου, καθὼς εἰς τὸν οὐρανὸν, ἔτσι καὶ εἰς τὴν γῆν.

Τὸ ψωμί μας τὸ καθημερινὸν δός μας τὸ σήμερον.

Καὶ συγχώρησέ μας τὰ χρεῖά μας, καθὼς καὶ ἡμεῖς συγχωροῦμεν
τοὺς χρεωφειλέτας μας.

Καὶ μὴ μᾶς φέρῃς εἰς πειρασμόν·

ἀλλὰ ἐλευθέρωσέ μας ἀπὸ τοῦ πονηροῦ.

ὅτι ἐδική σου εἶναι ἡ βασιλεία, καὶ ἡ δύναμις καὶ ἡ δόξα εἰς
τοὺς αἰῶνας. Ἀμήν.

LATIN.

From the version made by St. Jerome in the latter part of the fourth century, — the "Vulgate," — as edited by Tischendorf in his "Novum Testamentum Triglotum," Leipsic, 1854.

Pater noster qui es in caelis,
sanctificetur nomen tuum,
adveniat regnum tuum,
fiat voluntas tua sicut in caelo et in terra,
panem nostrum supersubstantialem da nobis hodie,
et dimitte nobis debita nostra sicut et nos dimittimus debitoribus
nostris,
et ne inducas nos in temptationem,
sed libera nos a malo.

ITALIAN.

From the version of Giovanni Diodati, original edition, Geneva, 1607, 4to.

Padre nostro, che sei ne' cieli,
sia santificato il tuo nome.
Il tuo regno venga,
la tua volontà sia fatta, siccome in cielo, così anche in terra.
Dacci hoggi il nostro pane cotidiano.
E rimettici i nostri debiti, siccome noi anchora gli rimettiamo
a' nostri debitori.
E non indurci in tentatione,
ma liberaci dal Maligno:
perciocche tuo è il regno, e la potenza, e la gloria, in sempiterno,
Amen.

SPANISH.

From the version of the Bible by Father Phelipe Scio de San Miguel, original edition, Valencia, 1790-1793, 10 vols. folio.

Padre nuestro, que estás en los Cielos :
santificado sea el tu nombre.
Venga el tu Reyno :
hágase tu voluntad, como en el Cielo así tambien en la tierra.
Danos hoy nuestro pan sobresubstancial.
Y perdónanos nuestras deudas, así como nosotros perdonamos
á nuestros deudores.
Y no nos dexes caer en la tentacion :
mas líbranos de mal. Amen.

PORTUGUESE.

From the translation of Antonio Pereira de Figueiredo, 1781-1783, as published by the British and Foreign Bible Society, London, 1855, 8vo.

Padre nosso que estás nos Ceos :
santificado seja o teu nome
Venha a nós o teu Reino.
Seja feita a tua vontade, assim na terra, como no Ceo.
O pão nosso, que he sobre toda a substancia, nos dá hoje.
E perdoa-nos as nossas dividas, assim como nós tambem perdoamos
aos nossos devedores :
E não nos deixes cair em tentação.
Mas livra nos do mal. Amen.

FRENCH.

From the Geneva version of 1588, as revised by David Martin, original edition, Amsterdam, 1707, fol.

Nôtre Père qui és aux cieux,
ton Nom soit sanctifié.
Ton Regne vicne.
Ta volonté soit faite en la terre comme au ciel.
Donne nous aujourd'hui nôtre pain quotidien.
Et nous quitte nos dettes, comme nous quittons aussi *les dettes*
à nos débiteurs.
Et ne nous indui point en tentation,
mais délivre nous du Malin.
Car à toi est le regne, & la puissance, & la gloire à jamais. Amen.

OLD FRENCH. (Twelfth century.)

As given by Adelung, Mithridates, II. 590, 591.

Sire Pere, qui es ès Ciaux,
Sanctifier soit li tuens Nons ;
Avigne li tuens Regnes ;
Soit faite ta Volantè, si comme ele est faite el Ciel, si soit ele
faite en Terre ;
Nostre Pain de chascun Jor nos done hui ;
Et pardone nos nos Meffais, si come nos pardonons à cos qui
meffait nos ont ;
Sire ne soffre, que nos soions tempté par mauvesse Temptacion ;
Mes Sir delivre nos de Mal.

WELSH.

From the edition of the Welsh Bible published by the British and Foreign Bible Society, London, 1837, 8vo.; being essentially Bishop Parry's version, first printed in 1620.

DANISH.

From the Danish Bible published by the British and Foreign Bible Society, London, 1855, 8vo.

Vor Fader, du som er i Himlene!
Helliget vorde dit Navn;
Komme dit Rige;
Skee din Villie, som i Himmelen, saa og paa Jorden;
Giv os i Dag vort daglige Brød;
Og forlad os vor Skyld, saa som vi forlade vore Skyldnere;
Og leed os ikke ind i Fristelse,
men frie os fra det Onde;
Thi dit er Riget, og Kraften, og Herligheden i Evighed, Amen.

SWEDISH.

From the Swedish Bible printed in Stockholm, 1850, 8vo., for the British and Foreign Bible Society.

Fader vår, som äst i himlom,
helgadt varde ditt Namn.
Tilkomme ditt rike:
Ske din vilje, såsom i himmelen, så ock på jordene.
Gif oss i dag vårt dagliga bröd:
Och förlåt oss våra skulder, såsom ock vi förlåte dem oss skyl-

FLEMISH.

From the edition of the New Testament printed at Brussels in 1838, as given by Auer in his "Vater Unser," 2^e Abtheilung, Vienna, 1847.

Onzen Vader, die in den hemel zyt:
Geheyligt zy uwen naem.
Dat uw ryk aenkome.
Dat uwen wil geschiede, op der aerde als in den hemel.
Geeft ons heden ons dagelyks broodt.
En vergeeft ons onze schulden, gelyk wy vergeven aen onze

Ende en leydt ons niet in bekoringe:
Maer verlost ons van den quaeden. Amen.

DUTCH.

From the version made by authority of the Synod of Dort, (first printed in 1637,) as published by the British and Foreign Bible Society, London, 1856, 8vo.

Onze Vader, die in de hemelen *zijt*!
uw naam worde geheiligd.
Uw Koninkrijk kome.
Uw wil geschiede, gelijk in den hemel, *alzo* ook op de aarde.
Geef ons heden ons dagelijksch brood.
En vergeef ons onze schulden, gelijk ook wij vergeven onzen
schuldenaren.
En leid ons niet in verzoeking,
maar verlos ons van den boozen.
Want uw is het koninkrijk, en de kracht, en de heerlijkheid, in
de eeuwigheid, Amen.

GERMAN.

From Luther's version, as edited by Tischendorf in his "Novum Testamentum Triglotum," Leipsic, 1854. The orthography is modernized. Luther's translation of the New Testament was first published, anonymously, in 1522.

Unser Vater in dem Himmel.
Dein Name werde geheiligt.
Dein Reich komme.
Dein Wille geschehe auf Erden wie im Himmel.
Unser täglich Brot gib uns heute.
Und vergib uns unsere Schulden, wie wir unsern Schuldigern
vergeben.
Und führe uns nicht in Versuchung,
sondern erlöse uns von dem Uebel.
Denn dein ist das Reich und die Kraft und die Herrlichkeit in

but delyuere vs fro yuel. Amen.

TYNDALE'S VERSION.

His revised edition of 1534, as printed in "The English Hexapla," London, 1841, 4to.

O oure father which arte in heven,
halowed be thy name.
Let thy kyngdome come.
Thy wyll be fulfilled, as well in erth, as it ys in heven.
Geve vs this daye our daily breede.
And forgeve vs oure treaspases, even as we forgeve oure

KING JAMES'S VERSION.

From a copy of the *first* edition of 1611.

Our father which art in heauen,
hallowed be thy Name.
Thy kingdome come.
Thy will be done, in earth, as it is in heauen.
Give vs this day our daily bread.
And forgiue vs our debts, as we forgiue our debtors.
And leade vs not into temptation,
bvt deliuer vs from euill:
For thine is the kingdome, and the power, and the glory, for
euer, Amen.

The earliest authentic event recorded in the history of Britain was the landing of Julius Cæsar on the eastern shore, fifty-five years before the Christian era. The country was then inhabited by the Britons, a Celtic race, who continued to hold possession of it till the middle of the fifth century. Of their language, styled the *Celtic*, or, with reference to Britain, the *British*, few traces now exist in England, except in geographical names, as those of some towns, mountains, rivers, lakes, &c.; but the remains of it are to be found in the Gaelic of the Scottish Highlands, in the Welsh, the Erse or Irish, and the Manks language, in the Isle of Man.

About the middle of the fifth century, the Saxons from Lower Germany invaded the island; and, before many years elapsed, they established their authority over the most of that part of it which is now called England; and the Britons were driven into Wales. From a leading branch of the Saxons, called *Angles*, the country received its name of *England*, and the new language was denominated from them the *Anglo-Saxon*; often also called simply the *Saxon*. At the time of their invasion, the Saxons were an illiterate people; but they afterwards cultivated learning to some extent; their language was

spoken nearly in its purity till the Norman conquest, and among their principal writers were Gildas, Cædmon, Ælfric, Bede, and King Alfred. — Ælfric was the author of an Anglo-Saxon and Latin vocabulary, the first writer of a bilingual dictionary, ancient or modern, whose name has been preserved.

The Anglo-Saxon dynasty, after having continued about six hundred years, was terminated, in 1066, by the invasion of William, Duke of Normandy, commonly called the *Conqueror*. The Norman-French now became the language of the court and the upper classes, and continued to be so for about two centuries, while the Anglo-Saxon, (or the Semi-Saxon,) continued to be the speech of the common people or peasantry; and in the course of time, these two languages became blended into one, forming the basis of the present English. Near the end of the second century after the Conquest, may be dated the beginning of the English language, which at length triumphed over the Norman-French, and was gradually improved till the accession of Queen Elizabeth to the throne, during whose reign the language may be regarded as having assumed substantially its present form, as exhibited in the works of Sidney, Spenser, Hooker, Shakespeare, Raleigh, and Bacon. But the writings of several of the reformers previous to the reign of Elizabeth, as Tyndale (the translator of the New Testament), Cranmer, Latimer, &c., attracted much attention. The works of Sir Thomas More, as Ben Jonson tells us, "were considered as models of pure and elegant style;" and according to Mr. Hallam, his "History of Richard III. is the first example of good English language; pure and perspicuous, well chosen, without vulgarisms or pedantry."

The following statement respecting the changes which took place in the language spoken by the inhabitants of England is given by Mr. Craik. — The first century after the conquest, during the reigns of William I., William II., Henry I., and Stephen, may be called the *infancy* of English; the second century, during the reigns of Henry II., Richard I., John, and Henry III., the *childhood*; the third century, during the reigns of Edward I., Edward II., and Edward III., the *boyhood*; and from that period (1377) to the beginning of the reign of Elizabeth (1558), the *youth*; — then commenced the *manhood*.

Mr. Hippiusley, in his "Chapters on Early English Literature," says: "Although neither the origin nor subsequent progress of English can be assigned to any specified dates, yet, for the sake of perspicuity, we may (as in the case of general history) establish arbitrary and conventional divisions. Thus we say, generally speaking, that about 1150 may be dated the decline of pure Saxon; about 1250 the commencement of English; and that the century between these two dates was occupied by a kind of Semi-Saxon language."

After the Norman conquest, the Saxon laws were continued in force, and were translated into Norman-French. "The proceedings," as stated by Blackstone (Commentaries, Book III. chap. 21), "were all written, as indeed all public proceedings were, in Norman or law French, and even the arguments of the counsel and the decisions of the court were in the same barbarous dialect. This continued till the reign of Edward III., who, having employed his arms successfully in subduing the *crown* of France, thought it unbecoming the dignity of the victors to use any longer the *language* of a vanquished country. By a statute, therefore, passed in the 36th year of his reign [1362], it was enacted, that, for the future, all pleas should be pleaded, shown, defended, answered, debated, and judged, in the English tongue, but be entered and enrolled in Latin." This is the date of the triumph of the English language over the French in the English courts of law.

"The Saxon power," Dr. Bosworth remarks, "ceased when William the Conqueror ascended the throne, but not the language; for Anglo-Saxon, after rejecting or changing many of its inflections, continued to be spoken by the old inhabitants till the time of Henry III., A. D. 1258. What was written after this period has generally so great

a resemblance to our present language, that it may evidently be called English."

In the fourteenth century flourished *Sir John Mandeville* [ob. 1372], the traveller, whose *Travels*, which appeared in 1356, formed the first English work in prose; *John Wicliffe*, the reformer [ob. 1384], who, with the aid of some of his followers, translated the Bible into English, though the whole translation, including both Testaments, was not printed till 1850; and *Geoffrey Chaucer* [ob. 1400], the great early English poet, author of many works in poetry and prose, (the most celebrated of which are the "Canterbury Tales,") who exerted a greater influence on the early state of the language than any other writer, and who introduced many words from the French. "But though [Edinburgh Review, vol. cxii.] the importations from the French are large, relative to the like element of such writers as Mandeville and Wicliffe, they are not such as defraud his works of the praise of Spenser's celebrated eulogy, that in them is to be found 'the well of English undefiled.'"

But the times, long after the age of Chaucer, continued barbarous, and, till after the invention of printing and the revival of learning, few writers of any distinction appeared to cultivate and improve the language, or to enrich it with valuable works. — In 1471, the art of printing was introduced into England by William Caxton, who was one of the most considerable writers in the language between the time of Chaucer and the Reformation.

SPECIMENS OF EARLY ENGLISH.

A Proclamation of Henry III. to the people of Huntingdonshire, A. D. 1258. "It currently passes for the earliest specimen of English." — *Latham*.

A literal translation of this Proclamation, taken from Henry's History of Great Britain, vol. viii.

"Henry, through God's support, king of England, lord of Ireland, duke of Normandy, of Acquitain, earl of Anjou, sends greeting, to all his subjects, learned and unlearned, of Huntington-shire. — This know ye well all, that we will and grant, what our counsellors all or the more part of them that be chosen through us and through the land-folk of our kingdom, have done, and shall do, to the honor of God, and our allegiance, for the good of the land, through the determination of those before said counsellors, be steadfast and permanent in all things without end, and we enjoin all our lieges, by the

allegiance that they owe us, that they steadfastly hold and swear to hold and to maintain the ordinances that be made and be to be made, through the before said counsellors, or through the more part of them also, as it is before said. And that each other help that for to do by them each other, against all men, in all that they ought for to do, and to promote. And none either of my land, nor of elsewhere, through this business, may be impeded or damaged in any way. And if any man or any woman cometh against them, we will and enjoin that all our lieges hold them deadly foes. And for that we will that this be steadfast and lasting, we send you this writ open, sealed with our seal, to keep amongst you in store. Witness ourself at London, the eighteenth day of the month of October, in the two-and-fortieyth year of our crowning."

An extract from Sir John Mandeville's *Travels*.

"And I John Maundevely knyghte aboveseyd, (alle thoughte I be unworthe,) that departed from oure contrees and passed the see, the zeer of grace 1322, that have passed manye londes and manye yles and contrees, and cerched manye fulle straunge places, and haue ben in manye a fulle gode honourable companye, and at many a faire dede of armes, (alle be it that I dide none myself, for myn unnable insuffisance,) now I am comen hom (mawgree my self) to reste: for gowtes, artetykes, that me distreyne, tho diffynen the ende of my labour, azcnst my wille (God knowethe.) And thus takynge solace of my wrecched reste, recordynge the tyme passed, I have fulfilled theise thinges and putte hem wryten in this boke, as it wolde come into my mynde, the zeer of grace 1356 in the 31 zeere that I departede from oure contrees. Wherefore I preye to alle the rederes and hereres of this boke, zif it plesse hem, that thei wolde preyen to God for me: and I schalle preye for hem. And alle tho that seyn for me a Pater noster, with an Ave Maria, that God forzeve me my synnes, I make hem partneres and graunte hem part of alle the gode pilgrimages, and of alle the gode dedes that I have don, zif ony be to his plesance: and noghte only of tho, but of alle that evere I schalle do unto my lyfes ende. And I beseeche Almyghty God, fro whom alle godenesse and grace cometh fro, that he vouchesaf, of his excellent mercy and habundant grace, to fulle fille hire soules with inspiracioun of the Holy Gost, in makynge defence of alle hire gostly enemyes here in erthe, to hire salvacioun, bothe of body and soule; to worschipe and thankynge of him, that is three and on, withouten begynnyng and withouten endynge; that is withouten qualitee, good, and withouten quantytee, gret; that in alle places is present, and alle thinges contenynnyng; the whiche that no goodnesse may amende, ne non ewelle empeyre; that in perfeyte trynytee lyveth and regneth God, be alle worldes and be all tymes. Amen, Amen, Amen."

An extract from Caxton's translation of the renowned apologue of the Middle Age, entitled "The Hystorye of Reynart the Foxe." Caxton says, "I have not added, ne mynussched, but have followed as nyghe as I can, my cople, whyche was in Dutche [German], and by me William Caxton translated into this rude and symple Englyssh, in thabbeey of Westmestre (1481)."

"How the Lyon, kynge of alle bestis, sent out his mandementis that alle beestis sholde come to his feest and court.

"It was about the tyme of Pentheoste or Whytsontyde, that the wodes comynly be lusty and gladsom, and the trees clad with levys and blossome, and the ground with herbes and flowris swete-smellyng, and also the fowles and byrdes synge melodiously in theyr armourye, that the Lyon, the noble kynge of all beestis wolde in the holy dayes of thys feest holde an open court at Stede, whyche he dyde to know over alle his land, and commanded by his straye commysaryons and maundements that every beest shold come thyder, in such wyse that alle the beestis grete and smale cam to the court, sauf Reynart the Foxe, for he knewe hymself fawty and gilty in many thynges agens-

many beestis that thyder sholde comen, that he durste not aventure to go thyder whan the kynge of alle beestis had assembled alle his court, ther was none of them alle but that he had complayned sore of Reynart the Foxe."

The Saxon or Anglo-Saxon language, which is a branch of the Teutonic, the language of the Teutones, a people who inhabited a large part of Central Europe, while the Celts overspread the west, is the parent language of the English. Some of the other north European languages, of the great Teutonic or Gotho-Teutonic family, which have contributed to enrich the English tongue, are the Danish, Swedish, Norwegian, and Icelandic, of the Scandinavian branch, and the German and Dutch, of the Germanic branch. The south European languages, which have furnished the largest contributions, are the Greek, Latin, and French; especially the Latin, through the medium of the French or Norman-French; also the Italian, the Spanish, and various other languages, have afforded more or less. "Suppose," says Dr. Trench ("English Past and Present"), "the English language to be divided into a hundred parts; of these, to make a rough distribution, sixty would be Saxon, thirty would be Latin (including of course the Latin which has come to us through the French), five would be Greek; we should then have assigned ninety-five parts, leaving the other five, perhaps too large a residue, to be divided among all the other languages from which we have adopted isolated words."

The Anglo-Saxon is the language to which the English owes its general form and structure, all the particles on which its syntax depends, all its pronouns and conjunctions, nearly all its prepositions, most of its monosyllables, and, indeed, all the words that are most frequently repeated on the same page. "The Anglo-Saxon," says Dr. Trench, "is not so much one element of the English language, as the foundation of it,—the basis. All its joints, its whole articulation, its sinews and its ligaments, the great body of articles, pronouns, conjunctions, prepositions, numerals, auxiliary verbs, all smaller words which serve to knit together and bind the larger into sentences,—these, not to speak of the grammatical structure of the language, are exclusively Saxon. The Latin language may contribute its tale of bricks, yea, of goodly and polished hewn stones, to the spiritual building; but the mortar, with all that holds and binds these together, and constitutes them into a house, is Saxon throughout."

The predominance of Anglo-Saxon will readily be seen by analyzing a passage in any common English writer. Of the sixty-six words which are comprised in the authorized English version of the Lord's prayer, there are only five that are not Anglo-Saxon. Mr. Sharon Turner, in his "History of the Anglo-Saxons," has adduced from popular English writers sixteen extracts, in which he has discriminated, by Italics, the words which are Anglo-Saxon from those of foreign origin. Two of his extracts are here quoted, and also the results of the comparisons of all of them are given. The words which are not Anglo-Saxon are in Italics in the following extracts:—

"And they made ready the *present* against *Joseph* came at noon; for they heard that they should eat bread there. And when *Joseph* came home, they brought him the *present* which was in their hand into the house, and bowed themselves to him to the earth. And he asked them of their welfare, and said, Is your father well, the old man of whom ye spake? Is he yet alive? And they answered, Thy *servant* our father is in good health, he is yet alive. And they bowed down their heads, and made *obedience*. And he lift up his eyes, and saw his brother *Benjamin*, his mother's son, and said, Is this your younger brother, of whom ye spake unto me? And he said, God be *gracious* unto thee, my son."—*Gen.* xliii. 25–29.

"Of *genius*, that *power* which constitutes a poet; that *quality* without which *judgment* is cold and knowledge is *inert*; that *energy*

which *collects*, *combines*, *amplifies*, and *animates*; the *superiority* must, with some *hesitation*, be *allowed* to *Dryden*. It is not to be *inferred*, that of this *poetical vigor* *Pope* had only a little, because *Dryden* had more; for every other writer since *Milton* must give *place* to *Pope*; and even of *Dryden* it must be said, that if he has brighter *paragraphs*, he has not better *poems*."—*Johnson*.

In the following table, the figures in the left-hand column show the whole number of words, exclusive of proper names, in the above two, and also in the fourteen other extracts or passages from popular English writers; and those in the right-hand column, the number of words in each which are not Saxon:—

	Words.	Not Saxon.
Genesis,	128	5
John xi. 32–36,	74	2
Spenser,	72	14
Shakespeare,	83	13
Milton,	89	16
Cowley,	77	10
Thomson,	78	14
Addison,	79	15
Locke,	94	20
Pope,	83	27
Young,	96	21
Swift,	90	10
Robertson,	113	34
Hume,	101	37
Gibbon,	79	32
Johnson,	81	21
Total,	1427	291

Of the total number of words, exclusive of proper names, in these sixteen passages, the proportion not Saxon is about one fifth. It is to be observed, that, in this computation, every repetition of a word is counted. In the verses quoted from Genesis, the word *and*, for example, is repeated, and therefore counted, twelve times.—In a longer passage from Shakespeare than the one referred to in the table, giving Wolsey's soliloquy on the favor of princes, beginning with "So farewell to the little good you bear me," found in the play of Henry VIII., there are, in twenty-three lines, containing one hundred and ninety-six words, only fourteen words not Anglo-Saxon, only about seven in a hundred.

In the first chapter of the common version of St. John's Gospel, there are one thousand and three words, of which, excepting fifty-three proper names, there are only fifty-five that are not Anglo-Saxon. In this chapter the particle *the* occurs sixty-eight times; *and*, sixty-one times; *of*, thirty-nine times; *that*, nineteen times; *unto*, fifteen times; *to*, thirteen times. Of the three personal pronouns, *I*, *thou*, and *he*, including their oblique forms, those of the first person occur thirty-three times; those of the second, thirty times; those of the third, eighty times. The verb *to be*, in its different inflections, occurs forty-six times. All these words, of so frequent occurrence, are Anglo-Saxon. There is, perhaps, no book in the English language in which Anglo-Saxon words more abound than in the common version of the Bible. Works which treat of the common affairs of life have the greatest proportion of such words, and scientific works, the least.

"If we look not merely at the number of the words which the Anglo-Saxon has contributed to the English, but to the *kinds* of words, as well as to the share it has had in its formation and development, we shall at once see that there is no comparison between the importance of this, and that of any other element. English grammar is almost exclusively occupied with what is of Anglo-Saxon origin. Our chief peculiarities of structure and of idiom are essentially Anglo-

Saxon; while almost all the forms and *classes* of words, which it is the peculiar office of grammar to investigate, are derived from that language. And though these peculiarities of structure may occupy little space, and these words be very few compared with those to be found in Johnson's Dictionary, they enter most vitally into the constitution of the language, and bear a most important part in shaping and determining its character. Thus, what few inflections we have, are all Anglo-Saxon. The English genitive, the general modes of forming the plural of nouns, and the terminations by which we express the comparative and superlative of adjectives, *er* and *est*; the inflections of the pronouns; of the tenses, persons, and participles of the verbs, whether regular or irregular; and the most frequent termination of our adverbs (*ly*), are all Anglo-Saxon. The nouns, too, derived from Latin and Greek, receive the Anglo-Saxon terminations of the genitive and the plural; while the preterites and participles of verbs derived from the same sources, take Anglo-Saxon inflections. As to the parts of speech, those which occur most frequently, and are individually of most importance, are almost wholly Anglo-Saxon. Such are our articles and definitives generally; as, *an, the, this, that, these, those, many, few, some, one, none*; the adjectives whose comparatives and superlatives are irregularly formed, and which are, in every language, among the most ancient, comprehensive in meaning, and extensively used; the separate words *more* and *most*, by which we as often express the forms of comparison as by distinct terminations; all our pronouns, personal, possessive, and interrogative; nearly every one of our so-called irregular verbs, including all the auxiliaries, *have, be, shall, will, may, can, must*, by which we express the force of the principal varieties of mood and tense; all the adverbs most frequently employed, and the prepositions and conjunctions almost without exception. . . . The English language consists of about 38,000 words. This includes, of course, not only radical words, but all derivatives, except the preterites and participles of verbs; to which must be added some few terms, which, though set down in the dictionaries, are either obsolete, or have never ceased to be considered foreign. Of these about 23,000, or nearly five-eighths, are of Anglo-Saxon origin. . . . In Bosworth's Anglo-Saxon Lexicon, there are from 25,000 to 28,000 words, counting, of course, compound words as well as roots. Supposing one fifth of these obsolete, there would remain nearly the numbers already stated."—*Henry Rogers*.

"The peculiar structure of the English language is far from having been investigated, as yet, with that degree of attention and accuracy that it deserves. Among other things, we do not find that any grammarian has been at the pains to take a full comparative view of its two great component parts; by which we mean, on the one hand, those words that are derived from the Saxon, Danish, and other northern languages, and, on the other hand, those from the Greek, Latin, French, and other idioms of the south of Europe. These two sets of vocables are so dissimilar from each other, that they appear, at first view, incapable of being amalgamated together, so as to form an harmonious whole; yet who is there that can read, feel, and understand, and does not admire the sublime harmony which Milton, Dryden, Pope, Shakespeare, Bolingbroke, and the other immortal poets and prose writers of Great Britain, have produced out of those discordant elements? To analyze, therefore, those elements, from which have resulted such inconceivable effects, is well worth the trouble of the grammarian and philologist; and the interesting discoveries to which such an inquiry will lead, will amply repay their learned labors.—As far as we have been able to judge from a superficial investigation of the subject, we are apt to believe that the English words of northern derivation are to those derived from the ancient, as well as the modern languages of Southern Europe, in the proportion of something more than three, but not quite as much as four, to one. As the southern words are, in general, polysyllabic, and make a conspicuous figure wherever they occur, many are apt to

think their number greater than on examination it really appears to be."—*P. S. Duponceau*.

The number of words belonging to the English language has never been accurately ascertained, and it is difficult to ascertain it with exactness; for it is difficult to form and apply the rules for computing the number. The number which is stated in the preceding extract from Mr. Rogers, is thirty-eight thousand, which is considerably less than the number found in Johnson's Dictionary, as it was left by him. Of the great number of words which have been introduced into the language, in the various sciences, since the first publication of Johnson's Dictionary, very few are of Anglo-Saxon origin. By adopting so restricted a mode of computing the number of English words, as to exclude all compound and obsolete words, and all words introduced by the arts and sciences within the past century, and thus to reduce the number to 38,000, the proportion of Anglo-Saxon words would probably not be far from that above stated; that is, five eighths. The computation of Mr. Duponceau of the proportion between the two classes of English words, those of northern and those of southern derivation, must have been formed, not by analyzing the vocabulary of an English dictionary, but by examining the words as they occur on the pages of English books; and, as Anglo-Saxon words are much more frequently repeated than those of a different origin, there may be no material inconsistency between his computation and that of Mr. Rogers.

The following are the principal *Anglo-Saxon* prefixes, namely, *a, be, em, for, fore, mis, out, over, un, and under*; as, *ahead, befriend, embody, forbid, forebode, misdeed, outdo, overact, unbind, unlike, undergo*.

Some of the common *Anglo-Saxon* terminations are the following, namely, *er, ful, hood, less, ly, ness, ship*; as *writer, mindful, childhood, helpless, justly, goodness, partnership*.

The contributions of the *Latin* language to the English are next, in importance and amount, to those of the Anglo-Saxon; and these contributions came chiefly through the medium of the French, or Norman-French, in consequence of the Norman conquest. These contributions, which appear much less, in proportion, on a page of an English book than in a dictionary of the language, are great and important, and they enter extensively into the etymology of the language. The Latin has served not only to refine and polish the English, but to enrich its vocabulary with many necessary and indispensable words. It has furnished duplicates or synonyms of many words, applied to common and familiar objects, which add much to variety and harmony of expression. Many common things, not necessarily offensive in themselves, appear more gross when expressed in common Anglo-Saxon words than in words derived from the Latin. It has furnished a large portion of the abstract and general terms, especially in the departments of theology, moral and political philosophy, and all the moral sciences; also a great part of the terms used in polite literature, and the language of polite life. A great part of the military terms in English come directly from the French. The number of Greek and Latin derivatives, which, within the last fifty years, have been introduced into the language, in consequence of the extension of the sciences of chemistry, mineralogy, geology, botany, and conchology, has been very great. These words, which greatly increase the vocabulary of a complete dictionary of the language, are found chiefly in works of science, and do not enter into the dialect of common life, of poetry, eloquence, or historical composition.

A single Greek or Latin word, in some cases, forms the root of numerous English words.—For instance, from the Latin verb *muta*, to change, are derived the following English words: *commute, commutable, commutability, commutation, commutative, commutatively, immutable, immutably, immutableness, immutability, immute, immutate, immutation, intermutation, intransmutable, mutable, mutableness, mutability, mutation, mutiny, mutineer, mutinous, mutuously,*

mutinousness, permute, permuter, permutation, transmute, transmuter, transmutable, transmutably, transmutability, transmuted, transmuting, transmutation. Some Latin words have much more numerous English derivatives; as the verb *pono*, to place, is regarded as the root of about two hundred and fifty English words; the verb *plico*, to fold, about two hundred; *duco*, to lead, and *fero*, to bear, each upwards of one hundred. — The Greek word *γράφω*, to write, to describe, forms the root of more than a hundred and fifty English words, and *λόγος*, reason, word, discourse, the root of more than two hundred.

The following are *Latin prefixes*: *a, ab, abs*, from; as, *avert, abjure, abstract*; — *ad, a, ac, af, ag, al, an, ap, ar, as, at*, to; as, *adduce, accede, affix*, &c.; — *ante*, before; as, *antecedent*; — *circum*, about; as, *circumjacent*; — *con, co, cog, col, com, cor*, together, with; as, *conform, coeval, collect*, &c.; — *contra*, against; as, *contradict*; — *de*, down, from; as, *deface, degrade*; — *dis*, asunder; as, *disarm*; — *e, ex*, out of; as, *eject, exclude*; — *extra*, beyond; as, *extrajudicial*; — *in, ig, il, im, ir* (when prefixed to a verb), in; as *indue*; (when prefixed to an adjective), not; as, *invisible*; — *inter*, between; as, *intermix*; — *intro*, within; as, *introduce*; — *ob, oc, of, op*, for, in the way of; as, *object, occur*; — *per*, through; as, *pervade*; — *post*, after; as, *postscript*; — *pre*, before; as, *precede*; — *preter*, beyond; as, *preternatural*; — *pro*, for, forward; as, *proconsul*; — *re*, back, again; as, *return, rebuild*; — *retro*, backward; as, *retrospect*; — *se*,

g

aside; as, *secede*; — *sine*, without; as, *sinecure*; — *sub, suc, suf, sup, sup, sus*, under, after; as, *subdean, suffice, suggest, supplant, suspect*; — *super*, above; as, *superabound, supernatural*; — *trans*, beyond; as, *transcend*; — *ultra*, beyond; as, *ultramarine*.

The following *terminations* are derived from the *Latin* or *French*: *able, ible, cle, ile, ial, al, ian, an, ant, ent, fy, lar, ity, or, ous, tion, tive, tude, ture*.

To the Greek the English language is indebted for most of the terms in physical science, and, indeed, for a great part of the terms employed in all the arts and sciences.

The following are *Greek prefixes*: *a (α)*, without; as, *acephalous*; — *amphi (ἀμφι)*, about, on both sides; as, *amphitheatre*; — *ana (ἀνά)*, through, again; as, *anabaptist*; — *anti (ἀντί)*, against; as, *antichristian*; — *apo (ἀπό)*, from; as, *apostate*; — *cata (κατά)*, down, from side to side; as, *cataract*; — *dia (διά)*, through; as, *diagonal*; — *en (ἐν)*, in; as, *endemic*; — *epi (ἐπὶ)*, upon; as, *epidemic*; — *hyper (ὕπερ)*, above; as, *hypercritic*; — *hypo (ὕπό)*, under; as, *hypocrite*; — *meta (μετά)*, beyond; as, *metaphysics*; — *para (παρά)*, by the side of, near; as, *paragraph*; — *peri (περί)*, about; as, *perimeter*; — *pro (πρό)*, before; as, *prologue*; — *syn, sy, syl, sym (σύν)*, together, with; as, *synonymous, syllogism, symmetry*.

The following *terminations* are from the *Greek*: *ic* and *ical*, from the Greek *ικος* and Latin *icus*; *logy*, from *λόγος*; *graphy*, from *γράφω*; *ize*, from *ίζω*.

ARCHAISMS, PROVINCIALISMS, AND AMERICANISMS.

THE English language, from the time of its first formation, has been subject to continual changes. Old words have been, from time to time, falling away, and new ones have been formed and brought into use. A large part of the words found in the early productions of English literature, such as those of Peter Langtoft, Robert of Gloucester, Robert Langland, (the reputed author of "Piers Ploughman,") Gower, Chaucer, Wicliffe, and Mandeville, are now obsolete; and in order to understand these works, further assistance is necessary than is afforded by modern dictionaries and grammars. Very few of the English writers who preceded the reign of Elizabeth, are now much read; and most of the obsolete words which their works contain may properly be consigned to glossaries accompanying the works, or to dictionaries of archaic words.

Several of these early productions have been published with glossaries attached to them, as the *Chronicles of Peter Langtoft* and *Robert of Gloucester*, by Hearne; and the works of Chaucer, by Tyrwhitt. Glossaries have also been appended to Spenser, Shakespeare, and Milton. Some works of a more general nature, relating to obsolete or archaic and provincial words, have, not long since, appeared; as Nares's "Glossary or Collection of Words, Phrases, &c., found in Shakespeare and his Contemporaries," Toone's "Glossary and Etymological Dictionary of Obsolete and Uncommon Words," Holloway's "General Dictionary of Provincialisms," Halliwell's "Dictionary of Archaic and Provincial Words," and Wright's "Dictionary of Obsolete and Provincial English." The first edition of Halliwell's Dictionary, which was published in 1846, contains no less than 51,027 words, and yet it is far from being complete. Jamieson's "Etymological Dictionary of the Scottish Language" also contains numerous archaic, as well as provincial, words. The publication of Boucher's "Glossary of Archaic and Provincial Words" (designed to be a large work in 4to.) was commenced in 1832; but only two numbers of it have appeared. Numerous other glossaries relating to the different counties and districts of England have been published, the most of which will be found mentioned on page lix. "From the writings of Sir Thomas Browne, Jeremy Taylor, Donne, and about a score more of our authors of that period, might probably be collected two thousand or three thousand words, which have since become obsolete." *Ed. Rev.* cxiii. p. 325.

The early bilingual dictionaries, such as English and Latin, and English and French, contain many obsolete words; and this is the fact with respect to many of the English dictionaries, as those of Bailey, Johnson, Ash, Richardson, and others. Johnson says, he "fixed Sidney's work [Sir Philip Sidney, who died in 1586] for the boundary, beyond which he made few excursions." Johnson's Dictionary, however, as he left it, contains many obsolete words, a considerable portion of which were taken from Bailey's Dictionary, though of such words he did not take near all that are found in Bailey. Of the words added by Mr. Todd, a much larger proportion are obsolete than of those admitted by Johnson; and of Todd's additional words, particularly in his second edition, there are many which are of merely local or provincial use, and some of them are unworthy of being inserted in a general dictionary of the language.

A dictionary of the English language, in order to be complete, must contain all the words, whether obsolete or not, found in books which are much read, such, for example, as the common version of the Scriptures, and the works of Shakespeare and of Milton; though there are many words in these works which are now obsolete, and many which, though not obsolete, are used in an obsolete sense, that needs explanation.

William Caxton, who first introduced printing into England, in his Preface to a Translation of Virgil's *Aeneid*, printed in 1490, speaking of the innovations then made in the English language, and the differences of the language in the different parts of the kingdom, says, "When I had advised me in this sayd booke, I delybered and concluded to translate it into Englyshe, and forthwyth I toke a pen and ynk, and wrote a leaf or tweyne, which I ouersawe agayn to correcte it; and when I saw the fayr and straunge termes therein, I doubted that it sholde please some gentylmen which had late blamed me, saying, that in my translaeyons I had over curyous termes, which coude not be understande of comyn people; and desired me to use olde and homely termes in my translaeyons, and fayn wolde I satisfye every man; and so to do, toke an olde boke and redde therein, and certaynly the Englysshe was so rude and brood, that I coude not wele understande it. And also my Lord Abbot of Westmynster ded do shewe to me late certain eydences wryton in old Englysshe, for to reduce it into our Englysshe now usid; and certaynly it was wryton in such wyse, that it was more lyke Dutche than Englysshe. I coude not reduce ne bryne it to be understonden. And certaynly our language now used varyeth ferre from that which was used and spoken when I was born. For we Englyssh men ben borne under the domynacyon of the mone, which is never stedfaste, but ever waverynge, waxyng one season, and waneth and discreaseth another season; and that comyne Englysshe that is spoken in one shyre varyeth from another, insomuche, that in my dayes happened, that certain merchauntes were in a shipp in Tamysc, for to have sailed over the see into Zelande, and for lacke of wynde they taryed atte Forland, and went to lande for to refreshe them; and one of them, named Sheffelde, a mercer, came into an hows, and axed for mete, and speccially he axed for *egges*, and the goode wyf answerde, that she coude speke no Frenshe. And the marchaunt was angry, for he also coude speke no Frenshe, but wolde have hadde *egges*, and she understode him not. And then at laste another sayd, that he wolde have *eyren*; then the goode wyf sayd, that she understode him well. Loo what sholde a man in thyse days now wryte, *egges* or *eyren*? Certaynly it is hard to playse every man, by cause of dyversyte and chaunge of langage; for in these days every man, that is in any reputacyon in his countre, will utter his communicacyon and matters in such manners and termes, that fewe men shall understonde them; and som honest and grete clerkes have been wyth me, and desired me to wryte the moste curyous termes that I coude find. And thus between playn, rude, and curyous, I stand abashed. But in my judgmente, the comyn termes that be dayli used, ben lighter to be understonde than the olde auneynt Englysshe."

England still abounds in provincialisms and local dialects; and in

some districts of the country, the peculiarities of the language are so great, that the speech of the common people can be but imperfectly understood by those who are unacquainted with their peculiar dialect. These peculiarities, or archaisms, are of great antiquity, and, as stated by Forby, "are all, in substance, remnants and derivatives of the language of past ages, which were, at some time or other, in common use, though in long process of time they have become only locally used and understood."

Of the local dialects, one of the most noted is the Craven Dialect, which is spoken in the deanery of Craven, a district of upwards of thirty miles in length and nearly as many in breadth, situated in the northern part of the west-riding of the county of York. Mr. Carr, the author of the "Craven Dialect and Glossary," maintains that it was "the language of crowned heads, of the court, and of the most eminent English historians, divines, and poets, of former ages." These provincialisms now form, to a great extent, the colloquial language of the lower classes; and many of them are found in the early productions of English literature; but in books of modern origin, they are seen chiefly in glossaries.

The Edinburgh Review (vol. lxxix. 1844) contains the following statement:—

"The number of provincial words that have hitherto been arrested by local glossaries, stand as follows:—

Shropshire,	1,993	Essex,	589
Devonshire and Cornwall,	878	Wiltshire,	592
Devonshire, (North),	1,146	Hallamshire,	1,568
Exmoor,	370	Craven,	6,169
Herefordshire,	822	North Country,	3,750
Lancashire,	1,932	Cheshire,	903
Suffolk,	2,400	Metropolitan, (Grose &	
Norfolk,	2,500	Pegge,)	3,500
Somersetshire,	1,204		
Sussex,	371	Total,	30,687

"Admitting that several of the foregoing are synonymous, superfluous, or common to each county, there are, nevertheless, many of them which, although alike orthographically, are vastly dissimilar in signification. Making these allowances, they amount to a little more than 20,000; or, according to the number of English counties hitherto illustrated, at the average ratio of 1,478 to a county. Calculating the twenty-six unpublished in the same ratio, they will furnish 38,428 additional provincialisms, forming, in the aggregate, 59,000 words in the colloquial tongue of the lower classes, which can, for the chief part, produce proofs of legitimate origin; about the same number, in short, of authorized words that are admitted into Todd's edition of Johnson's Dictionary. Besides these and the private compilations made by individuals, in the course of their miscellaneous reading, there are some very copious early English Vocabularies lying in manuscript in the cathedral libraries of Durham, Winchester, and Canterbury, in the British Museum, King's College, and other depositories, deserving collection; as well as rare lexicographical volumes, which issued from the press in the infancy of typography."

A considerable number of these provincialisms are to be found in Ash's English Dictionary, and also among the additions of Mr. Todd to Johnson's Dictionary. But, as they are not found in the classical or in the popular literature of England, and are rarely seen in print, except in the glossaries in which they have been collected, they have little claim to a place in a general dictionary of the language. Were education universally diffused throughout the country, and the children accustomed to use the same or similar elementary books of instruction, most of these provincialisms would soon be disused and forgotten.

The English language as it is spoken and written in the

United States, differs somewhat from the language as written and spoken in any part of England; and it differs also, more or less, in the different States; but there is nothing here at all to be compared with the local dialects of England. The greater uniformity of language which exists in this country, is to be attributed to the frequent removals of the inhabitants from one place to another, their free intercourse with each other, and to the fact that elementary education is much more generally diffused among the middle and lower classes here, than in England. The Americans have formed their language more from books, and less from oral speech, than the English; and they are more in the habit of having recourse to a dictionary for instruction respecting the pronunciation and use of words.

Although it is not to be denied that in respectable American writers there are to be found some innovations or some deviations from what is regarded, in England, as good usage with respect to language, they are not chargeable with all the innovations of which they have been accused. Mr. Boucher, in the Introduction to his Glossary, written in 1800, says, "The United States of America, too proud, as it would seem, to acknowledge themselves indebted to this country for their existence, their power, or their language, denying and revolting against the two first, are also making all the haste they conveniently can to rid themselves of the last. With little or no dialect, they are peculiarly addicted to innovation; but such as need not excite our envy, whether we regard their elegance, or their propriety. . . . I here set down a few Americanisms, collected from some of their recent publications, merely to justify what is asserted respecting their passion for innovating, and at the same time to show how very poorly they are qualified to set up for reformers of language. . . . 'Who has dared to *advocate* the interests of,' &c. *Morse's Sermon at Charlestown*, in 1798.—'Demoralizing principles.' *Morse*.—'If, as a nation, we *progress* in impiety, demoralization,' &c. *Morse*.—'A man who has risen through all the *grades* of office to the highest,' &c. *Morse*.—'Mons. Chevalier de Luxern *memorialized* Congress, last year.' *Political Pamphlet printed at Philadelphia*, in 1798.—'. . . made Dr. Franklin the *alone* minister.' *Pamphlet printed at Boston*.—'It is too deep, too hazardous a game, and too *inimical* for a friend to play.' *Id.*—'Virginia has produced some of the most *influential* men.' *Morse's Geography*.—'Repentance and reformation are a *mean* of averting the displeasure and punishment of the Almighty Governor of the world.' *Abercrombie's Sermon at Philadelphia*."

With respect to the words in Italics, in the passages here cited, if all of them are not now in established good use in England, they have all been used by respectable English writers. With respect to the two words, *alone* and *mean*, which are used in an improper manner, it may be remarked that the word *mean* has been often used in the same manner by respectable English writers; and that it would probably be as difficult to find, in an American as in an English writer, another instance in which *alone* is used in the same manner as in the pamphlet cited.

The settlement of this country was commenced, upwards of two centuries ago, chiefly by emigrations from different parts of Great Britain. The emigrants brought with them not only the common language of the country in the state in which it then existed, but also more or less of the local peculiarities; and in this way some of the English provincialisms have been widely diffused in the United States, and have been regarded as of American origin. The changes in the language, which have taken place within the last two centuries, have not been precisely the same on the two sides of the Atlantic; yet the difference is less than might reasonably have been expected; and it is doubtless a fact, that, among the great mass of the people throughout England, the deviations from what is there deemed the correct standard of speaking and writing the language, are much greater than among the mass of the people of the United States.

The Americans have derived some words from the Indians, and they have formed some new ones; to some old ones they have affixed new significations; they have retained some which have become obsolete in England; some English provincialisms they have brought into common use; and there are many neologisms, consisting in part of new words, and in part of old words with new significations, in use both in England and in the United States, with regard to which it is difficult to determine in which country they originated.

A great part of the differences with respect to the language of the educated classes in the United States and in England, grow out of the different institutions and the different circumstances and employments of the people of the two countries. There is a considerable number of words which owe their origin to American institutions, social relations, and occupations, and which are properly used by Americans, but which Englishmen have no occasion to employ, except in speaking of American affairs. On the other hand, there is quite as large a number of words which relate to the civil and religious institutions and social relations of Great Britain, and which are never used in the United States, except with reference to that country. Such differences as these have a legitimate origin, and may be regarded as proper, and not as corruptions of the language. But there are many neologisms, or new words, some of American, and some of recent English origin, which are entitled to little countenance. A considerable number of such have been noticed in this Dictionary; but many have been passed by as plants suffered to remain and die in their native soil, being regarded as not worth transplanting.

Among the words which owe their origin or peculiar use to American institutions, are the following: *Congress, congressional, president, presidential, senate, senatorial, gubernatorial, state, territory, town, general court, general assembly, selectmen, message, &c.* The words *executive* and *judiciary* are often used in the United States as nouns, but not often in England. The words *electioneer* and *electioneering*, which are much used here, are also used, in some degree, in England though the more common terms used there, in the same sense, are *canvass* and *canvassing*, which are rarely used in this manner in the United States. The word *caucus* is of undisputed American origin. Among the American ecclesiastical terms may be noted *association, associational, consociation, consociational, result, approbate, &c.*

Among the terms relating to the political and civil institutions of England, rarely used in this country, except with reference to England, may be enumerated the following: *parliament, parliamentary, prorogue, prorogation, hustings, exchequer, postman, tubman, sergeant-at-law, assize, excise, bailiff, lords, commons, peerage, baronetage, knightage, &c.*; among the ecclesiastical terms, *establishment, conformity, non-conformity, dissenters, dean, deanery, archdeacon, archdeaconry, prebend, prebendary, canon, canonry, vicar, vicarage, curate, curacy, dignity, dignified, benefice, beneficed, advowson, commendam, donative, preferment, impropriation, im-*

propriator, &c. Among the many neologisms which may claim the undisputed honor of English origin, are *constituency, borough-monger, squirarchy, shopocracy, conservatism, radicalism, liberalism, chartism, Anglicanism, high-churchism, dissenterism, voluntarism, &c.*

There is a difference between the two countries in relation to the terms employed to designate their respective literary institutions, and also with respect to the technical terms used in their universities and colleges. The following English university terms, for example, are not at all used here in the same sense: *act, wrangler, optime, bursar, commoner, sizar, pensioner, servitor, batteller, foundationer*; and the following American terms do not appear to be used in the same sense in England, namely, *commencement, senior, junior, sophomore, freshman, salutatory, beneficury.*

Some words, more or less in use, are regarded as of Indian origin; as, *calumet, chocolate, hackmatack, hominy, hommock, maize, moose, musquash, moccason, mush, pappoose, pecan, penamian, potato, powwow, quahang, raccoon, sachem, sagamore, samp, succotash, squash, squaw, terrapin, tobacco, tomato, tomahawk, wampum, wigwam, Yankee.*

Of the English provincialisms which are often used in the United States, may be enumerated, *to wilt, to slump, to rile or to roil, slumphy, slosh, slush, sloshy, slushy, rily or roily, spunk, spunky, sippy, squirm, squiggle, quackie, shote, &c.*

There is a considerable number of words the propriety of which has been disputed, but which are now often used both in the United States and in England. Such are the following: *to advocate, to base, to demoralize, to derange, to expatriate, to jeopardize, to locate, to obligate, to test, to veto, prayerful, prayerless, profanity, umcell, &c.* The following words, which are more or less used in the United States, are little used in England: *to approbate, to belittle, to clapboard, to eventuate, to loan; sundown, boudable, freshet, sled, sleigh, clapboard, shingle, prairie, snay, sawyer, vendue, sparse, bookstore, bindery or bookbindery, lot, as a building lot, a house lot, a wood lot.*

The following words have senses affixed to them in the United States different from the senses in which they are commonly used in England: *baggage, balance, clever, cob, corn, creek, full, lumber, merchant, quile, spell, stage, store*; also the verbs *to improve, to notify, to girdle, to guess, &c.*

There are some words which both English and American recent writers have used in a new sense; as, *to realize, to solemnize, to transpire; obnoxious, temper, &c.* Many of the neologisms which have been stigmatized as American innovations or corruptions, have been sanctioned by the use of English authors. The adjective *lengthy*, and the verb *to progress*, with the accent on the last syllable, are reputed to be of American origin; but, though they may probably have originated here, yet they seem to have been adopted in England; and comparatively higher authorities may be adduced in support of their use from English, than from American, writers. (See the words *LENGTHY, PROGRESS, CLEVER, &c.*, in the Dictionary.)

HISTORY OF ENGLISH LEXICOGRAPHY.

LEXICOGRAPHY is a branch of literature which appears to have been but little cultivated in ancient times. It is doubtful whether the ancient Greeks and Romans ever wrote what would be properly called *dictionaries* of their respective languages. No such works written by them are now extant; nor is there positive evidence that any such ever existed. The terms *lexicon* and *dictionary* were not in use during the classic period of the Greek and Roman languages; but they are of comparatively modern introduction. Varro, who died 27 B. C., wrote a work entitled "*De Lingua Latinâ*," which consisted of twenty-four books, of which only six, and these much mutilated, are now extant. One of the books contained a sort of glossary of Latin terms. Apollonius of Alexandria, commonly supposed to have lived in the time of Augustus, though some suppose him to have been much later, wrote a sort of glossary to Homer.

"The oldest extant Greek lexicographer," says the Penny Cyclopædia, "is Apollonius the Sophist, a contemporary of Augustus. His work, entitled *Ἀἰεὶς Ὀμηρικὰ*, or 'Homeric Words,' though much interpolated, is very useful. All the other original Greek lexicons and glossaries we have, such as the '*Onomasticon*' (or Collection of Synonymes) of Julius Pollux, the lexicons of Suidas, Harpocration, and Hesychius, and the '*Etymologicum Magnum*,' sometimes attributed to Marcus Musurus, although of the authors of some of them the exact age is disputed, were undoubtedly compiled subsequent, and most of them probably long subsequent, to the commencement of the Christian era. It is supposed, indeed, that they were founded upon older compilations of the same kind; but of the form of those lost works we know nothing. It may be reasonably doubted if either the Greeks or Romans were in the habit of making use of dictionaries in studying a foreign language or dialect, as has been the general practice in modern times."

The following is a brief notice of a few of the earliest lexicographical works that are now extant. — Julius Pollux, a native of Naucratis, in Egypt, and a teacher of rhetoric at Athens, in the early part of the third century of the Christian era, was the author of the "*Onomasticon*," a Greek Vocabulary, divided into ten books. It contains a vast variety of synonymous words and phrases, arranged under general heads, but not alphabetically, and it partakes more of the nature of an encyclopædia than of a dictionary. The first edition of it was printed at Venice in 1502.

Hesychius of Alexandria, by some stated to have lived as early as the third, and by others not before the fifth or sixth century, was the author of a Greek lexicon or glossary, consisting of short explanations of uncommon Greek words and technical terms. The first edition of it was printed at Venice in 1513.

Valerius Harpocration, a Greek rhetorician of Alexandria, wrote a work entitled "*Lexicon Decem Oratorum*" ("Lexicon to the Ten Orators"), which contains an account of many of the persons and facts mentioned in the orations of the ten principal orators of Athens. "We have," says the Penny Cyclopædia, "no particulars of his life, nor of the time in which he lived." Mr. Watt styles him "an Alexandrian rhetorician of the fourth century," and entitles his work "*Lexicon in decem Rhetores*." It was first printed at Venice in 1503.

Photius, patriarch of Constantinople, who died in 891, was the author of the *Ἀἰεὶς Συνταγὴ*, a Greek glossary or lexicon, an edition of which, edited by Hermann, was published at Leipsic in 1808; and another, edited by Porson, was published in London in 1822.

Suidas, whose age and country are not ascertained, but who is supposed to have lived between 900 and 1025 A. D., was the author of a Greek Lexicon, styled by some an "Historical and Geographical Dictionary," also an "Encyclopædia." It comprises the names of men and places, as well as the words which properly belong to a dictionary. The first edition was printed at Milan in 1499.

John Balbus, or Balbi, or John of Genoa, (being a Genoese,) who died in 1298, was the author of the "*Catholicon*," a Latin dictionary containing between seven hundred and eight hundred pages folio; first printed at Mentz, in 1460, by Gutenberg. "Although this work," says Watt, "contains many errors, it has the singularity of being the first Latin dictionary after the destruction of the language."

Johannes Crestonus (Placentinus), a native of Piacenza, was the author of the "*Lexicon Græco-Latinum*," the first Greek and Latin dictionary extant. The first edition, supposed to have been printed at Milan, is without date. The earliest edition, with a date, was printed at Vicenza in 1483.

Calepin, or Calepino, a native of Calepio, near Bergamo, in Italy, who died in 1510, was the author of the "*Dictionary*," a Latin dictionary, one of the earliest works of the kind, first printed at Reggio in 1502. It went through many editions, and received such additions as made it almost a new work. Facciolati, assisted by his pupil Egidio Forcellini, prepared and published a new edition in 1731. "It was," as is stated by the Penny Cyclopædia, "in the course of his joint labors with Facciolati, that Forcellini conceived the plan of a totally new Latin dictionary, which, after more than thirty years' assiduous application, he brought to light under the title of '*Totius Latinitatis Lexicon*,' four volumes folio, Padua, 1771. This work has superseded all other Latin dictionaries." An enlarged edition of this work, edited by James Bailey, was published in London in 1828; and it also formed the principal basis of the "*Lexicon of the Latin Language*," edited by F. P. Leverett, and first published at Boston in 1836. — "*Corvucopia*," "*Breviloquus Vocabularius*," and "*Gemma Vocabulorum atque Medulla*," are titles of other early lexicographical works on the Latin language.

The earliest lexicographical labors in England were performed near the end of the fifteenth century; and their object was to facilitate the study of the Latin language. The title of the earliest work of the kind published in that country, as given in Dr. Dibdin's "Typographical Antiquities," was as follows: "*Promptorium Puerorum. Promptorium Parvulorum, sive Clericorum. Medulla Grammaticæ*." It was first printed by Richard Pynson, in 1490, in folio. Editions of it were printed by Wynkyn de Worde, in 1510, 1512, 1516, and 1528. "Richard Fraunces, a preaching or black friar," as is stated by William Herbert, the typographical antiquary, "was the author of this first English and Latin dictionary, in which are many old English words nowhere else explained." "This book," says Dr. Dibdin, "is printed in double columns; the English before the Latin; the nouns first, under each letter of the alphabet, the verbs, adverbs, &c., after them; both nouns and verbs are declined very particularly. The work was intended, as the commencement of the account of the third edition of it specifies, as a companion to the '*Ortus Vocabulorum*,' in Latin and English."

In 1500 (the next year after the first publication of the work above noticed) was printed by Wynkyn de Worde the first edition of the work bearing the following title, as stated in Dr. Dibdin's "Typo-

graphical Antiquities : " — "*Ortus Vocabulorum: alphabetico ordine fere omnia que in Catholico breuiloquo Cornucopia Gemma Vocabulorum atque Medulla Grammatices ponuntur cum perpuleris Additoribus Ascens, et vernaculæ Linguae Anglicanæ expositionem continens.*" This is the first edition of the first Latin and English dictionary, — "a work," says Dibdin, "of considerable importance to grammatical antiquaries, and the parent production of our popular Latin and English Dictionary by Ainsworth." Subsequent editions were printed in 1508, 1509, 1514, 1516, and 1518.

The next lexicographical work, and the first entitled a *dictionary*, (*dictionary*), that was published in England, was the "*Dictionary*" (Latin and English) of Sir Thomas Elyot, who was a distinguished scholar in the reign of Henry VIII., a friend of Sir Thomas More, and the author of various works. It was first published in 1538; and the dates of other editions which appeared before the author's death, in 1546, are as follows: 1541, 1542, and 1545. The title of the edition of 1542, as given by Ames, is "*Bibliotheca Eliotæ, Eliotis Librerie.*" It was dedicated to Henry VIII.; and the following is an extract from the dedication: "To the moste excellent prince, and our moste redoubted souerayne lorde Kinge Henry the VIII., Supreme head in erthe immediately vnder Christe, of the Church of Englande. . . . About a yere passed, J begame a Dictionarie, declaring latine by englishe. But whyles J was prinyng, and vneth the half deale performed, your hyghnes being informed therof, by the reportes of gentyll maister Antony Denny, for his wysedome and diligence worthily callyd by your hyghnesse into your priue chamber, and of Wylyam Tildisley, keper of your gracy lybrarie, and after mooste specially by the recommendation of the most honourable lorde Crumwell, lorde priue seale, &c., conceyued of my labours a good expectation, and declaring your moste noble and beneuolent nature, in fauouryng them that wyll be well occupied, your hyghnesse, in the presence of diuers of your noble men, commendynge myne enterprise, affirmed, that if J wolde earnestly traunyle therin, your hyghnes, as well with excellent counsaile, as with suche bokes as your grace had, and J lacked, wolde therin ayde me. Wherefore incontinent J caused the printer to cesse, and beginnyng at the letter M, where J left, J passed forth to the last letter with a more diligent study. And that done, J oftsones returned to my fyrst letter, and with a semblable diligence performed the remnant; — and under your gracyous governance, your lighnesse being myn onely mayster, — hauyng fynished for this tyme this symple Dictionarie, wherein, J dare affirme, may be found a thousand mo latine wordes, thau were together in any one Dictionarie publyshed in this royaume at the tyme when J fyrste began to write this commentarie, which is almost two yeres passed. — Gyuyng to your maiestie mooste hartye thanks, as to the chiefe author thereof, by whose gracyous meanes menne, beinge studious, may vnderstande better the latine tunge in syxe monethes, than they mought haue doone afore in thre yeres, withoute perfyte instructours, whyche are not many, and suche as be, are not easy to come by: the cause J nede not reherse, sens J ones declared it in my booke called the '*Gouernour*,' which about VIII yeres passed J dydde dedicate vnto your hyghnesse."

"This is a work," says Dr. Dibdin, "of considerable ability, and deservedly held in high estimation, as one of the earliest and best attempts in the promotion of lexicographical literature." After the death of Sir Thomas Elyot, his Dictionary was corrected and enlarged repeatedly by Thomas Cooper, "Schole maister of Maudlens in Oxforde," afterwards bishop of Lincoln; and in the edition of 1563, the title was changed to "*Thesaurus utriusque Lingue Latine et Britannicæ*;" Cooper having, according to Anthony Wood, "augmented and enriched it with 33,000 words and phrases."

After the appearance of some smaller Latin and English dictionaries, the "Alvearie, or Triple Dictionary, in English, Latin, and French," by John Baret, a scholar of Cambridge, was published in 1573; and to the second edition, published in 1580, he added the

Greek, and entitled it the "Alvearie, or Quadruple Dictionary." In his address "To the Reader," he gives a singular account of the manner in which the "Alvearie" was formed, from which the following extract is given: —

"About eyghtene yeares agone, hauing pupils at Cambridge studious of the Latin tongue, I vsed them often to write epistles and themes together, and daily to translate some peece of English into Latin, for the more speedy and easie attaining of the same. And after we had a little begunne, perceyuing what great trouble it was to come running to mee for euery word they missed, (knowing then of no other Dictionarie to helpe vs, but Sir Thomas Eliots *Librerie*, which was come out a little before,) I appoynted them certaine leaues of the same booke euery day, to write the English before y^e Latin, and likewise to gather a number of fine phrases out of *Cicero*, *Terence*, *Cæsar*, *Lucretius*, &c., and to set them under seuerall Tytles, for the more ready finding them againe at their neede. Thus within a yere or two they had gathered together a great volume, which (for the apt similitude betwene the good scholars and diligent Bees in gathering their wax and hony into their Hie) I called then their *Aluearie*, both for a memoriall by whom it was made, and also by this name to incourage other to the like diligence, for that they should not see their worthy prayse for the same vnworthily drowned in obliuion. Not long after, diuers of our friendes borrowing this our worke which we had thus contriued and wrought onely for our owne priuate vse, often and many wayes moued mee to put it in print for the common profit of others, and the publike propagation of the Latin tongue; or else to suffer them to get it printed at their proper costes and charges. But I both vnwilling, and halfe ashamed to haue our rude notes come abroad vnder the viewe of so many learned eyes, &c. . . . at length comming to London, . . . there came vnto mee a printer shewing mee *Hulats Dictionary* (which before I neuer sawe) and tolde me he intended to print it out of hand, augmented with our notes also if I would. But this bargaine went not forward with him for diuers causes. . . . Now therefore (gentle Reader) looke not to finde in this booke, euery thing whatsoever thou wouldest seeke for, as though all thinges were here so perfect that nothing lacked, or were possible to be added hereunto. But if thou mayst onely here finde the most wordes that thou needest, or at the least so many as no other such Dictionarie yet extant or made hath the like: take them. I saye, in good part this our simple *Aluearie* in the meane time, and giue God the praise that first moued mee to set my pupils on worke therabout, and so mercifully also hath strengthened vs (thus as it is) at length to atchieue and finish the same."

The Latin and English Dictionary of Dr. John Rider (an Oxford scholar, and afterwards bishop of Killaloe) was published in 1589. His additions, as he states, "amount to 4,000 words more than any one dictionary now extant affords;" and, in his Preface, he says, "No one dictionary, as yet extant, hath the English before the Latine, with a full index of all such Latine words as are in any common dictionary." Rider's Dictionary was subsequently enlarged, first by Francis Holyoke, and afterwards by his son Thomas Holyoke. The Latin and English dictionaries of Gouldman, Coles, and Littleton, which appeared within a few years of each other, passed through various editions, — that of Coles, as many as eighteen; but they were all superseded by the Latin and English Dictionary of Robert Ainsworth, which was first published in 1736, in one volume 4to. The second edition, edited by Patrick, appeared in 1746, in two volumes 4to. In 1752, it was published in two volumes folio; in 1773, "a new edition with great additions and amendments," by Dr. Thomas Morell, appeared; and an improved edition, edited by Dr. Carey, was published, in 1816, in one volume 4to. "There have been," as stated by Lowndes, "abridgments of this work by Young, Thomas, Morell, and Jamieson."

Of the early English lexicographers, the object of whose labours was to facilitate the study of foreign modern languages, may be men-

tioned Percivale, the author of a "Spanish and English Dictionary," Cotgrave, author of a "French and English Dictionary," (with the English part by Sherwood,) and also Minsheu, author of the "Guide into the Tongues," first published in 1617, in eleven languages, — the English, British or Welsh, Low Dutch, High Dutch, French, Italian, Spanish, Portuguese, Latin, Greek, and Hebrew. A new edition was published in 1627, in nine languages, but with a considerable increase in the number of radical words. "In this," says Sir John Hawkins, "the author undertakes to give the etymologies or derivations of the greater part of the words therein contained; but, as they amount, at the most, to no more than 14,173, the work must be deemed not sufficiently copious."

The object of the first lexicographical labors in England was to facilitate the study of the Latin language, afterwards that of the Greek, and also of foreign modern languages; and it was in these bilingual dictionaries, such as Latin and English, and French and English, that the common English words were first collected. The early dictionaries, which were designed for mere English readers, were very limited and meagre productions, their chief object being to explain what were styled the "hard words" of the language. Two of the earliest of these works were those of Bullokar and Cockeram. The former, the "English Expositor," by Dr. John Bullokar, was first published in 1616. It passed through many editions; and the title of the edition printed at Cambridge, in England, in 1688, is as follows: "An English Expositour, or Compleat Dictionary; teaching the Interpretation of the hardest Words and most useful Terms of Art used in our Language; first set forth by J. B., Dr. of Physick, and now the eighth time revised, corrected, and very much augmented." It is a little volume, 18mo., and contains only 5,080 words.

The English Dictionary of Blount, often written *Blunt*, was a larger work than any other of the kind that preceded it; and it was soon followed by a still more considerable one, that of Edward Phillips, the nephew and pupil of Milton. The title of Phillips's dictionary is "The New World of English Words, or a General Dictionary, containing the Interpretations of such hard Words as are derived from other Languages, whether Hebrew, Arabick, Syriack, Greek, Latin, Italian, French, Spanish, British, Dutch, Saxon, &c., their Etymologies and perfect Definitions." Sir John Hawkins says of this work, "'The New World of Words,' which, as it is much more copious than that of Blount, and contains a great quantity of matter, must be looked on as the basis of English lexicography." Though Phillips is entitled to the credit of having advanced the progress of English lexicography, yet his "World" is hardly deserving of being regarded as its "basis." The first edition is a small folio, of only three hundred pages, containing only about 13,000 words. Of these words, a large proportion are such as do not properly belong to a dictionary of the English language, but rather to an encyclopædia, consisting of geographical and other proper names; and it contains but few words of genuine English growth; but the subsequent editions of the work were very much enlarged.

Phillips gives a list of the names of thirty-four "learned gentlemen and artists who contributed their assistance." He quotes from another author the following remark: "A dictionary for the English tongue would require an encyclopædie of knowledge, and the concurrence of many learned heads." "Such an encyclopædy," he says, "I present the reader with; . . . a volume which the so many years' industry of myself and others hath brought to such perfection." In the publisher's advertisement of the work, it is thus characterized: "The so long expected work, *The New World of English Words*, or a General Dictionary, containing the terms, etymologies, definitions, and perfect interpretations of the proper significations of hard English words throughout the arts and sciences, liberal or mechanic, as also other subjects that are useful, or appertain to the language of our nation; to which is added the signification of proper names, mythology and poetical fictions, historical relations, geographical descriptions of the

countries and cities of the world, especially of these three nations, wherein their chiefest antiquities, battles, and other most memorable passages, are mentioned: a work very necessary for strangers, as well as our own countrymen, — for all persons that would rightly understand what they discourse, write, or read." After the death of the author, the sixth edition, edited by John Kersey, was published in 1706, "revised, corrected, and improved, with the addition of near 20,000 words from the best authors."

Phillips's Dictionary was followed by those of Coles and Kersey, which, though they were printed in a much smaller form, contained many more of the common words of the language. Dr. Watts, in his "Art of Reading and Writing English," published in 1720, thus notices the work of Kersey: "The best dictionary that I know for this purpose [spelling] is entitled 'A New English Dictionary,' &c., by J. K. The second edition, 1713, in small octavo."

After Kersey's, and soon after 1720, appeared the celebrated Dictionary of Nathan Bailey, which was the first English dictionary in which an attempt was made to give a complete collection of the words of the language. Mr. Watt, in his "Bibliotheca Britannica," thus notices this work: "Bailey's English Dictionary, printed in 1728, (fourth edition,) was long the only one in use, and still continues a favorite with many readers. It was afterwards enlarged into two volumes 8vo., and some years after printed in folio, with additions in the mathematical part by G. Gordon, in the botanical by Philip Miller, and in the etymological by T. Lediard; the whole revised [1764] by Dr. Joseph Nicol Scott, a physician. The octavo [24th edition] was revised by Dr. Harwood, 1782."

A part of the long title of the first volume of the edition of 1728 is as follows: "An Universal Etymological English Dictionary; comprehending the Derivations of the Generality of Words in the English Tongue, either Ancient or Modern, from the Ancient British, Saxon, Danish, Norman and Modern French, Teutonic, Dutch, Spanish, Italian; as also from the Latin, Greek, and Hebrew Languages, each in their proper Characters; and also a clear Explication of all difficult Words derived from any of the aforesaid Languages; . . . containing many thousand Words more than either Harris, Phillips, Kersey, or any English Dictionary before extant." The second volume was first published in 1727, as a supplement to the first; and it consists of two parts: — "I. An Additional Collection of some Thousands of Words not in the former Volume. II. An Orthographical Dictionary, showing both the Orthography and Orthoëpia of the English Tongue."

In his Preface to the first volume, Bailey says, "As for the *etymological part*, or those words from foreign languages, whence the English words were derived, I think I am the first who has attempted it in English, except what Mr. Blunt has done in his 'Glossography,' which is but a very small part, and those of a Latin derivation chiefly, besides a small extract of Dr. Skinner's 'Etymologicon.'" In his Introduction to the second volume, he remarks, "I have placed an accent over that syllable on which a particular stress or force of sound is to be laid by the voice in pronouncing." This appears to be the first instance in which any such aid to pronunciation was furnished in an English dictionary. The parts of speech were not noted in this nor in any previous English dictionary.

This lexicographer, who was a schoolmaster at Stepney, was the author of several other works, among which were the "*Dictionary Domesticum*, or a Household Dictionary," and "An Introduction to the English Tongue;" and he was the editor of several classical authors for the use of schools. He died, as it is stated in the "Gentleman's Magazine," in 1742. The following remarks are extracted from the Encyclopædia Perthensis: "It is somewhat surprising that, though this work [Bailey's Dictionary] is universally known, having gone through at least twenty-six editions since the first edition, dedicated in Latin to Frederick Prince of Wales, and his royal sisters, (his majesty's [George III.] father and aunts,) was published, yet no ac-

count whatever has hitherto been given of the learned and laborious author, who excelled Dr. Johnson himself, in industry at least, by introducing a far greater number of words, in his small work of one volume 8vo., than the doctor has inserted in both his volumes folio. We have searched in vain for an account of this learned lexicographer."—In reference to the above comparison of the number of words found in the dictionaries of Bailey and Johnson, it may be remarked, that Johnson omitted many words that are in Bailey's Dictionary, because they were not in use; but he inserted many not found in it. He speaks of "the deficiencies of dictionaries," with respect to the number of words, and says, he "has much augmented the vocabulary."

Dyche's Dictionary, a work in one volume 8vo., "originally begun by the Rev. Thomas Dyche, and finished by William Pardon," has had an extensive circulation in England. The seventh edition was published in 1752, and the sixteenth in 1777. This statement seems hardly consistent with the remark of Watt, above quoted, that Bailey's Dictionary "was long the only one in use."

Benjamin Martin, an ingenious man, and the author of several publications on scientific and philosophical subjects, published a dictionary of considerable merit. The first edition was printed in 1749; the second, in 1754.

In 1747, Dr. Johnson published a "Plan for a Dictionary of the English Language," addressed to the Earl of Chesterfield; and soon afterwards he made a contract with some eminent London booksellers for performing the labor of preparing the work, for the sum of £1,575.

The following account of his method of proceeding is given by Sir John Hawkins: "He had, for the purpose of carrying on this arduous work, and being near the printers employed in it, taken a handsome house in Gough Square, and fitted up a room in it with desks and other accommodations for amanuenses, whom, to the number of five or six, he kept constantly under his eye. An interleaved copy of Bailey's Dictionary in folio, he made the repository of the several articles, and these he collected by incessant reading the best authors in our language, in the practice whereof his method was to score with a black-lead pencil the words by him selected, and give them over to his assistants to insert in their places. The books he used for this purpose were what he had in his own collection, a copious but a miserably ragged one, and all such as he could borrow; which latter, if ever they came back to those that lent them, were so defaced as to be scarce worth owning; and yet some of his friends were glad to receive and entertain them as curiosities."

Johnson, who is styled, by Dr. A. B. Evans, "the great captain of English lexicography," completed his task, after seven years' arduous labor, in 1755; and it is justly regarded as one of the greatest literary achievements ever performed by any man within the same space of time. In a notice of the work in the "Gentleman's Magazine" for April, 1755, just after its publication, the following language is used: "Let not any one attempt to withhold the honor which is due to him who alone has effected, in seven years, what the joint labor of forty academicians could not produce in a neighboring nation in less than half a century."

The publication of this Dictionary formed a greater era in the history of the language than that of any other work. No other dictionary has had so much influence in fixing the external form of the language, and ascertaining and settling the meaning and proper use of words. Johnson was the first to introduce into English lexicography the method of illustrating the different significations of words by examples from the best writers; and his Dictionary, from the time of its first publication, has been, far more than any other, regarded as a standard for the language. It has formed substantially the basis of many smaller works, and, as Walker remarks, it "has been deemed lawful plunder by every subsequent lexicographer."

The next year after the publication of his Dictionary, Johnson prepared the octavo abridgment; and he revised the large work for the edition of 1773, without, however, making great additions or alterations. Supplements to it, by Mason, Seager, and Jodrell, have been published in a separate form.

In 1814, an edition of Johnson's Dictionary, with numerous corrections, and with the addition of about 14,000 words, by the Rev. Henry John Todd, was published; and, in 1827, there was a second edition, with the addition of about one thousand more words, by Mr. Todd. The words added by Mr. Todd, in his first edition, were, in great part, if not chiefly, derived from the English writers of the 17th century; and a considerable part of them are obsolete; and of those added in his second edition, a large proportion are provincial or local words, some of them hardly worthy of a place in a dictionary of the English language.

The merits of Johnson's Dictionary have been by some exaggerated, and by others underrated. But though many defects have been pointed out, yet no one of his countrymen has yet produced a work that has superseded it. It would be unreasonable to expect, from the labor of seven years, a work for which "a whole life would be insufficient." If it had been perfectly adapted to the language at the time of its first publication, it would be very defective now. Many changes have taken place in the language within the last century, and there has been a vast influx of new words from the various departments of the arts and sciences. In relation to these matters this Dictionary was not designed to treat largely; and the scientific terms which it contains generally need to be defined anew, and a great many new ones need to be added; but in these departments Mr. Todd made few improvements or additions.

The "Penny Cyclopædia" speaks of the work as follows: "Johnson's Dictionary has been accounted the standard work of its class since its appearance in 1755; but, although it was a great achievement for an individual, and its definitions, in particular, afford remarkable evidence of its author's ingenuity and command of expression, it is, in many respects, as far as possible from being what a dictionary should be. Its etymological part (as Horne Tooke has long ago shown) is little better than so much rubbish; and it is characterized throughout by a total want of method and philosophical views. Some valuable matter has been added by the Rev. Mr. Todd; but the philosophical character of the work has received no improvement in his hands."

"I have," says Sir John Stoddard, "spoken freely of the errors and defects in Johnson's Dictionary; but it must be remembered that the English language could never boast, until his time, of a collection of its words accompanied with authorities for different significations, by our best writers. His work was one of immense labor; and we cannot but lament that during great part of the time which he devoted to it, he was in fact writing, from day to day, for bread."

Of Johnson's Dictionary Lord Brougham says, "He conferred upon English literature the important benefit of the first even tolerably good dictionary of the language, and one, the general merit of which may be inferred from the fact, that after the lapse of nearly a century filled with the monuments of literary labor incalculably multiplied in all directions, no similar work has superseded it. . . . The dictionary, with all its faults, still keeps its ground, and has no successor that could supplant it. This is owing to the admirable plan of giving passages from the writers cited as authorities for each word; and this part of the design is well executed. Hence the book becomes almost as entertaining to read, as useful to consult. The more difficult task of definition has been less happily performed, but far better than the etymological part, which neither shows profound knowledge, nor makes a successful application of it. The compiler appears to have satisfied himself with one or two authorities, and neither to have chosen them well, nor consulted them with discrimination."

Of this work Lord Macaulay says, "It was indeed the first dictionary that could be read with pleasure. The definitions show so much acuteness of thought and command of language, and the passages quoted from poets, divines, and philosophers are so skilfully selected, that a leisure hour may always be agreeably spent in turning over the pages. The faults of the book resolve themselves, for the most part, into one great fault. Johnson was a wretched etymologist. He knew little or nothing of any Teutonic language except English, which indeed, as he wrote it, was scarcely a Teutonic language; and thus he was absolutely at the mercy of Junius and Skinner."

Since the first publication of Johnson's Dictionary, many other English dictionaries, of various degrees of merit, have appeared in England, the titles, dates, and names of the authors of which may be seen in the following Catalogue; but they cannot, all of them, be here particularly noticed. The most considerable of these works is Dr. Richardson's "New Dictionary of the English Language," published in 1838. This is an elaborate work, in which much greater attention was paid to etymology than had been bestowed by Johnson or any other English lexicographer. The author himself says of his work, "As an Etymological Dictionary, I may affirm, that my own is the first that has been attempted in the English language since the publication of the works of Junius and Skinner, and that it is the

only one which professes to combine with etymology an exact explanation of meaning, and a copious deduction of usages."

The Quarterly Review says of this work, "It is an admirable addition to our lexicography, supplying a great desideratum, as exhibiting the biography of each word, its birth, parentage, and education, the changes that have befallen it, the company it has kept, and the connections it has formed, by a rich series of quotations, all in chronological order." Dean Trench says of it, "It is the only English dictionary in which etymology assumes the dignity of a science." This dictionary indicates an extensive and laborious research into the early and almost forgotten productions of English literature; and it is highly valuable and interesting to one who is desirous of studying the history of the language.

In 1828, the first edition of the "American Dictionary of the English Language," by Noah Webster, LL. D. was published,—a work of great labor and learning, comprising a much more full vocabulary than Johnson's Dictionary, and containing many and great improvements with respect both to the etymology and definitions of words. This dictionary has been much enlarged and greatly improved in succeeding editions, by the Rev. Chauncey A. Goodrich, D. D., and it has received numerous and high commendations, and has met with great success.

ENGLISH ORTHOEPISTS.

But little attention was bestowed upon orthoepy, by English lexicographers, till after the first publication of Johnson's Dictionary. Since that time, many dictionaries have been published in which the pronunciation of the language has been made the principal object. One of the first works of this sort was the Dictionary of Dr. Kenrick, in a large quarto volume, published in 1772. This was followed, in 1775, by Perry's "Royal Standard English Dictionary," a small work, which had an extensive circulation, both in Great Britain and in the United States. "The Synonymous, Etymological, and Pronouncing English Dictionary," a much larger work, by the same author, in royal octavo, was published in 1805.—This latter is the work of Perry which is referred to by the abbreviation *P.* in this Dictionary.

In 1780, Thomas Sheridan, a native of Ireland, who had been an actor of some note upon the stage, and was a distinguished lecturer on elocution in London, at Oxford, Cambridge, and elsewhere, published his "Complete Dictionary of the English Language, both with Regard to Sound and Meaning, one main Object of which is to establish a plain and permanent Standard of Pronunciation." This work commanded much more attention, as a pronouncing dictionary, than any other of the kind that preceded it.

In 1784, the Rev. Robert Nares, afterwards archdeacon of Stafford, and one of the first editors of the "British Critic," published the "Elements of Orthoepy, containing a Distinct View of the Whole Analogy of the English Language, so far as it relates to Pronunciation, Accent, and Quantity." This is a judicious and valuable work, though not in the form of a dictionary.

In 1791 appeared the first edition of the celebrated Dictionary of John Walker, entitled "A Critical Pronouncing Dictionary and Expositor of the English Language; in which not only the Meaning of every Word is clearly explained, and the Sound of every Syllable distinctly shown, but where Words are subject to different Pronunciations, the Authorities of our best Pronouncing Dictionaries are fully exhibited, the Reasons for each are at large displayed, and the preferable Pronunciation is pointed out;—to which are prefixed Princi-

ples of English Pronunciation." The author had previously published a valuable work, entitled "A Rhyming Dictionary; in which the whole Language is arranged according to its Terminations." And he afterwards, in 1798, published his "Key to the Classical Pronunciation of Greek, Latin, and Scripture Proper Names."

In the preparation of his Dictionary, Walker made pronunciation his leading object; and for this it is chiefly valued. His design was, as he expresses it, "principally to give a kind of history of pronunciation, and to register its present state." His Dictionary has been very extensively circulated both in Great Britain and the United States. "The settlement of the pronunciation of the English language upon analogical principles, and according to the best usage," as stated by the Penny Cyclopædia, "was certainly attempted by Walker more systematically than by any preceding writer.—It [his Dictionary] has been eminently successful, having gone through between twenty and thirty editions, and having superseded all other previous works of the same nature." Walker was long a distinguished teacher of elocution in London, was a careful observer, and favorably situated to become acquainted with the best usage. No other Englishman, probably, ever gave a longer, more laborious, and thorough attention to the subject of orthoepy than he, and no other ever obtained so high and widely extended a reputation as an orthoepist.* In modern English literature, Walker holds a similar rank, as an orthoepist, to that of Johnson as a lexicographer. Their labors have been, in several dictionaries, blended together; and their names are, in a manner,

* Walker's employment, as a teacher of elocution, was among the higher class and best educated people of England. The following testimony to his merits, the eminent statesman and orator Edmund Burke, is found in "Prior's Life of Burke." "One of the persons who particularly solicited Mr. Burke's exertions on this occasion was Mr. or (as he was commonly termed) *Elocution* Walker, the 'Pronouncing Dictionary,' and other works of merit, and who had given in the art to young Burke. . . . Mr. Burke, one day, in the vicinity of the House of Commons, introduced him to a nobleman, accidentally passing, following characteristic exordium: 'Here, my Lord Berkeley, is Mr. Walker, not to know, by name at least, would argue a want of knowledge of the hard cadences, and proprieties of our language.'"

proverbially associated with each other, as being each the first in his respective department,—Johnson for the authority and signification of words, and Walker for their pronunciation.

Since the first appearance of Walker's Dictionary, various other pronouncing dictionaries have been published in England, the majority of them smaller works, designed especially for the use of schools. In pronunciation, fashion is changeable, as well as in other things; and though Walker may be esteemed the best guide for ascertaining what was the pronunciation of the language at the beginning of the present century, yet a considerable change has taken place since his time, and on this account, some of the more recent orthoepists may, in some cases at least, be looked upon as better guides, in relation to present usage, than Walker.

Of the dictionaries which have been published in London since the first appearance of Walker's, the one which evinces much the most investigation of the subject of orthoepy, is that of Mr. B. H. Smart, entitled "A New Critical Pronouncing Dictionary of the English Language, adapted to the present State of Literature and Science," published in 1836. The same work, reduced in size, entitled "Smart's Pronouncing Dictionary of the English Language epitomized," was published in 1840. To the title of this Dictionary is prefixed "Walker remodelled;" though it is more of an original work than most English dictionaries; and the author has introduced, as he states, "some twenty thousand words not found in Walker." "With changes," he remarks, "that extended to every part of the Dictionary, it is plain that the altered work was mine, not Walker's. The title 'Walker Remodelled,' which the proprietors chose to give it, had, in fact, no other foundation than the original purpose for which they had engaged me."

The following remarks are extracted from Mr. Smart's Preface: "Walker's Dictionary, in reality a transcript of Johnson's, with the

addition of the current pronunciation affixed to each word, and the omission of the etymologies and authorities, supplied for many years all that was demanded in a dictionary of its kind. But the fifty or sixty years which have elapsed since its first publication have produced changes in science, in opinions, in habits of thought, greater, perhaps, than any similar space of time in any past age has witnessed; changes that have materially affected our language, and rendered all dictionaries in some degree obsolete, that fairly reflected its extent and application only forty years ago. The proprietors of Walker's Dictionary, finding it would slide entirely out of use unless it were adapted to the present day, engaged me, as a teacher of elocution, known in London since Walker's decease, to make the necessary changes. They believed that they imposed no greater task upon me than the insertion of new words, and the revision throughout of Walker's pronunciation; but I soon found, that, with any chance of success, much greater innovations must be attempted. . . . Disposed, on general points, to think entirely with my predecessor, I have not had any very extensive occasion for differing from him in particulars; but some occasions have occurred, as might be expected, from the distance between his day and mine. In short, I pretend to reflect the oral usage of English, such as it is at present, among the sensible and well-educated in the British metropolis. . . . I am a Londoner, have lived nearly all my life in London, and have been able to observe the usage of all classes. As a teacher of the English language and literature, I have been admitted into some of the first families of the kingdom; as one partial to books, I have come much into contact with bookish men; while, as a public reader and lecturer, I have been obliged to fashion my own pronunciation to the taste of the day. Thus prepared, I may not unwarrantably believe that my opinion may have some value with those who seek the opinion of another to regulate their pronunciation."—See p. xx.

A CATALOGUE OF ENGLISH DICTIONARIES.

THE first part of the following Catalogue comprises not only dictionaries of English words, or of the English language, but also many bilingual dictionaries; that is, dictionaries containing a vocabulary not only of the English, but also of some other languages, ancient or modern, as English and Latin, English and French, &c., — dictionaries which were written for the purpose of facilitating the study of ancient languages and of foreign modern languages. All the earlier lexicographical labors in England were spent on works of this sort. No attempt has been made to exhibit here a complete list of these bilingual dictionaries, except in the earlier part of the period embraced in the Catalogue.

Within a century past, a great many dictionaries have been published in England, and a considerable number also in the United States, for the purpose of facilitating the study of several ancient, and of numerous modern, languages. A few of these, that are particularly connected with English literature, are included in the following Catalogue; but the most of them are entirely omitted.

There are many points relating to English lexicography that are not easily ascertained. Many of the dictionaries have had their titles changed from those which were given them in the first edition; many of them have been much altered by the labor of subsequent editors; with respect to some, it is not easy to ascertain the date of the first edition; and some have undoubtedly been published which have passed into oblivion, and are now entirely unknown.

It is not easy to form an unexceptionable classification of dictionaries; and there are some respecting which it is difficult to determine to what class they most properly belong. The list of the dictionaries of the various arts and sciences, contained in the following Catalogue, is not complete. The object has been to insert all the most important ones; though there are, doubtless, some that are omitted more important than some that are inserted. Dictionaries of facts, comprising biography, geography, history, mythology, &c., also most of the glossaries to individual authors, are intentionally omitted.

SIGNS.

☞ Parallel lines [] are prefixed to two or more words that come under the same principle of pronunciation.

☞ A dagger [†] is prefixed to words or meanings of words, that are obsolete or antiquated.

☞ The figures occasionally annexed to the pronouncing words, refer to paragraphs in the "*Principles of Pronunciation*."

☞ Words printed in *Italics*, in the *Vocabulary*, (as *Calculus* and *Natvett*), are words which belong to *foreign languages*, and are not properly Anglicized.

☞ The two parts of such compound words as are not properly written as simple words, are separated by a *lengthened hyphen*; as, *Fellow-commoner*. The two parts of such words are commonly and properly separated, when written or printed, by a hyphen.

☞ The double accent mark, when used in pronunciation, denotes that the aspirated sound of the succeeding consonant is thrown back on the preceding syllable; thus, *peti'tion* (petish'on.)

DICTIONARY

OF THE

ENGLISH LANGUAGE.

A

1

ABANDON

A, pronounced *ā* as a letter, but *a* as a word.

1. The first letter of the alphabet, and a vowel. It has various sounds, of which the three principal are, the long, as in *fate*, the short, as in *fat*, and the broad, as in *fall*.—See *Key to the Sounds of the Vowels*, and *Principles of Pronunciation*, No. 4.

2. [A. S. *an*, one.] The indefinite article, set before nouns in the singular number, and signifying one, any, some; as, “a man,” “a tree”;—each, every; as, “two dollars a day,” “ten cents a bunch.”—It is also put before collective nouns, as, “a multitude,” “a dozen,” “a thousand”; and it is used in connection with plural nouns when they are preceded by the adjective *few* and the phrase *great many*, as, “a few men,” “a great many men”; but in these cases it implies one whole number, or an aggregate of few or many.—Before words beginning with a vowel or a vowel sound, it retains *n* after it for the sake of euphony, as, “an ox,” “an hour”; this having been the original form of the indefinite article.—See *AN*.

“Any, an, a, one, seem all to be nearly equivalent words, and derived from one origin; I mean from *ane*, the name of unity. Hence *a*, or *an*, and *any* are frequently synonymous; ‘a considerate man would have acted differently’; that is, *any* considerate man.”

Dr. Crombie.
“In the generality of grammars the definite article *the* and the indefinite article *an* are the very first parts of speech that are considered. In no language, in its oldest stage, is there ever a word giving, in its primary sense, the ideas of *a* and *the*.”

3. A contraction for *at*, *on*, or *in*, before participles or participial nouns. “Long a coming.”

They go a begging to a bankrupt's door.

4. † A barbarous corruption for *he*.

Stand here by me, Master Robert Shallow; I will make the king do you grace: I will leap upon him as *a* comes by.

5. † A barbarous corruption for *have*.

I had not thought my body could *a* yielded.

In composition the prefixed syllable *a*, in words from the Anglo-Saxon, is derived, in some cases, from a preposition; as, *aboard*, *ablaze*, *abow*, *adays*, *aloft*, formerly written *on board*, *on blaze*, *on row*, *on days*, *on left*. In other cases, according to Lye, “it was originally merely an initial augment, altering nothing in the sense of the word”; and hence, in some words from that language, it is sometimes retained and sometimes dropped, as, *abidan* or *bidan*, to abide or bide, *abreac*, to break; and, when retained in some, it seems to add an intensive effect, as, *awake*, *arise*, in Milton's line,

Awake, arise, or be for ever fallen.

In many words to which it is prefixed, it has a peculiar significance not easily defined, as, *afresh*, *aloud*, *anew*; and in some cases of colloquial usage it seems to be expetitive, and may have originated in a careless pronunciation, as, *awary*, *acold*, used by Shakspeare: “I 'gin to be *awary* of the sun”; “Poor Tom 's *acold*.”

In words of Greek origin, *a* is a prefix of privative or negative meaning; as in *achromatic*, from *a*, not, or without, and *χρῶμα*, color, i. e. without color.

AAM (ām), *n*. [Dut. *aam*.] (*Com*.) A Dutch liquid measure, varying in different cities:—at Amsterdam, it is nearly equal to 41 English wine gallons; at Antwerp, to 36½; at Hamburg, to 38½; and at Frankfort, to 39 gallons. *McCulloch*.

AA-RÖN'IC, (ā-rön'ik), } *a*. Relating to
AA-RÖN'I-CAL (ā-rön'e-kal), } Aaron, the Jewish high priest, or to the priesthood, of which Aaron was the head.

AB-. A prefix to words of Latin origin, as in *absolve*, from *absolve* (*ab* and *solvo*, to loosen). It is a Latin preposition, and signifies *from*. It becomes *abs* before words beginning with *c*, *q*, or *t*; as, *abs-tain*, from *abstinere* (*abs* and *teneo*, to hold).

At the beginning of the names of English places, it generally shows that they have some relation to an *abbey* or *abbot*; as, *Abingdon*.

AB, n. [Heb. אֲבִיב, verdure.] The fifth month of the ancient Hebrew sacred year, but the eleventh of the civil year, or, in intercalary years, the twelfth.

AB'A-CA, n. A sort of hemp or flax which grows in the Philippine Islands.

The *abscesses* and ordinates of the several points of a curve determine its nature. In the figure, C D is the *abscess*, and B D the ordinate, of the point B.

ABRŪS, n.; pl. *ABRŪSSES*. (Geom.) Same as *ABRŪSSES*. *Brande.*

ABRŪS, n. (ab-sizh'un, 93) [ab-sizh'un, W. J. F. Ja. K. Sm. C.; ab-sizh'un, S. P.], n. [L. *abscondo*.]

1. Act of cutting off. *Wiseman.*

2. State of being cut off. *Broune.*

"I have differed from Mr. Sheridan in marking *ss* in this word, and I think with the best usage on my side. Though double *ss* is almost always pronounced sharp and hissing, yet when a sharp *s* precedes, it seems more agreeable to the ear to pronounce the succeeding *s* flat. Thus, though the termination *tion* is always sharp, yet because the *s* in *transition* is necessarily sharp, the *t* goes into the flat sound, as if written *transishun*, which see." *Walker.*

These remarks relating to the pronunciation of double *ss* in *abscond* are applicable also to the double *s* in *secession* and *recession*, and also in the word *seasons*.

ABRŪS, n. [L. *abscondo*, to hide away.]

[*i*, *absconded*; *pp*, *absconding*, *absconded*.]

"Dr. Johnson tells us, that this word was anciently and properly accented on the first syllable, though now frequently on the second. That it was accented on the first syllable till within these few years is pretty generally remembered; and if *Shakspeare* did not, by poetical license, violate the accentuation of his time, it was certainly pronounced so two centuries ago, as appears by Dr. Johnson's quotation of him.

"Our court shall be a little *academy*, Still and contemplative in living arts."

But the accentuation of this word formerly, on the first syllable, is so generally acknowledged, as not to stand in need of poetic authority." *Walker.* — The now received reading of *Shakspeare* in the above passage is *academe*; but *Holland*, his contemporary, has, "And *Vetus* now, who holds thy house, fair *academy* hight;" and *Cowley*, in a later age,

"He that only talked with him might find A little *academy* in his mind."

AC-CÉPT-A-BIL'I-TY, *n.* Quality of being acceptable; acceptableness. *Bp. Taylor.*

AC-CÉPT'A-BLE [ak-sép'ta-bl, *P. Ja. K. Sm. Cl. Wb. Johnson, Ash, Dyche, Barclay*; ak-sép'ta-bl, *S. W. J. E. F. C.*], *a.* Sure to be accepted or well received; welcome; grateful; pleasing.

A sacrifice acceptable, well-pleasing to God. *Phil. iv. 18.*
This woman, whom thou mad'st to be my help,
So fit, so acceptable, so divine. *Milton.*

“Within these twenty years, this word has shifted its accent from the second to the first syllable. There are now few polite speakers who do not pronounce it *ac'ceptable*; and it is much to be regretted that this pronunciation is become so general.” *Walker*.—Such was the fact, as stated by *Walker*, near the end of the last century; and it conformed to the usage of the poets, e. g. of *Johnson*, and of *Milton*. But the accent of the words *acceptable* and *commendable* has, in a great measure, been shifted back again from the first to the second syllable; and they are so accented by several of the latest English orthoepists.—See **COMMENDABLE**.

AC-CÉPT'A-BLE-NÉSS, *n.* The quality of being acceptable. *Grew.*

More desperate than their first accesses. *Hudibras.*
Syn.—See **ADMITTANCE**.

With respect to the pronunciation of this word there is a difference among the orthoepists as well as in usage. *Smart* says, “It sometimes has the accent on the first syllable.” *Walker* remarks as follows:—“This word is sometimes heard with the accent on the first syllable.”

‘Hail, water-gruel, healing power,
Of easy access to the poor!’

But this pronunciation ought to be avoided, as contrary to analogy and the general usage of the language.”

AC'CÉS-SA-RI-LY, *ad.* In the manner of an accessory.

AC'CÉS-SA-RI-NÉSS, *n.* The state of being accessory. *Decay of Piety.*

AC'CÉS-SA-RY [ak-sés-sa-ré, *S. W. P. J. E. F. Ja. K. Sm.*; ak-sés'sa-ré, *Ash*], *a.*

1. Contributing to a crime; assisting; accessory. “Accessory to rebellion.” *Clarendon.*

2. That is added; additional; accessory. “Things that are accessory hereunto.” *Hooker.*

AC'CÉS-SA-RY, *n.* [*L. accedo*, *accessus*; *Low L. accessorius*]. (*Law.*) One who is not the chief actor in an offence, nor present at its performance, but is concerned therein, either before or after its performance; an accomplice; an abettor. *Bowyer.*

Syn.—See **ABETTOR**.

An accessory before the fact (*Law*) is one who, being absent when the crime was committed, yet counselled or commanded another to commit it.

An accessory after the fact is one who harbors, conceals, or assists the offender.—See **ACCESSORY**.

This word is chiefly used in legal forms; but its orthography is quite unsettled. This will appear evident both from examining the dictionaries and from observing common usage. With respect to the dictionaries which were published before that of *Johnson*, the orthography found in those of *Baret*, *Bullock*, *Cotgrave*, *Phillips*, &c., is *accessary*; in those of *Coles*, *Kersey*, *Bailey*, *Dyche*, and *Martin*, both *accessary* and *accessory*; and all the principal dictionaries of the English language published since that of *Johnson*, give both forms.—*Johnson* says of *accessary*,—“A corruption of the word *accessory*, but now more commonly used than the proper word”; and *Smart* says, “*Accessory* claims a slight etymological preference, but is less usual.”

As to the *Law Dictionaries*, the orthography of those of *Whitlaw*, *Burn*, *Bowyer*, and *Burrill*, is *accessary*; those of *Cowell*, *Blount*, *Cunningham*, *Tomlins*, and *Bell*, give both forms. The orthography found in *Blackstone's Commentaries* and *Erskine's Institutes* is *accessory*, that of *Dane's Abridgment* and the *Penny Cyclopædia*, *accessary*. *Brande* gives *accessory* as the orthography of the word when a legal term, and *accessary* or *accessory* when used in the arts.

AC-CÉS-SI-BIL'I-TY, *n.* The quality of being accessible. *I. Taylor.*

AC-CÉS-SI-BLE, *a.* That may be approached; approachable; easy of access. *Addison.*

AC-CÉS-SI-BLY, *ad.* So as to be accessible. *Clarke.*

AC-CIA-CA-TU'RA (at-chá-ká-tá-rá), *n.* [*It., a squeezing*]. (*Mus.*) A grace note, one semitone below that to which it is prefixed, being, as it were, squeezed in. *Brande.*

AC'CI-DÉNCE, *n.* [*L. accidentia*, accidents, pl. of *accidens*]. A corruption of *accidents*, being the name applied to a little book containing the accidents or first rudiments of grammar.

I pray you, ask him some questions in his *accidence*. *Shak.*

AC'CI-DÉNT, *n.* [*L. accido*, *accidens*, to happen to; *ad*, to, and *cado*, to fall.]

1. An event proceeding from an unknown cause, or happening without the design of the agent; an unforeseen event; incident; casualty; chance. “Some unlooked accident.” *Shak.*

2. A property or quality of any being that is not essential to it. “But the body's accident.” *Davies.*

3. *pl.* (*Gram.*) The properties and inflections of the parts of speech. *Holder.*

Syn.—*Accident* excludes the idea of design, and *event* excludes the idea of chance. *Accident* refers to what has happened; *chance* to what may happen. An *event* is more important than an *accident*. Whatever happens, whether by chance or design, may be called an *incident*. A *casualty* is an unwelcome accident; and, when used as a law term, it often suggests the idea of those accidents by which an injury has been sustained, or for which a coroner may be invoked.—See **CIRCUMSTANCE**.

AC-CI-DÉNT'AL, *n.* 1. A property non-essential. *Pearson.*

Conceive, as much as you can, of the essentials of any subject before you consider its *accidentals*. *Locke.*

3. (*Paint.*) A chance effect produced by rays of light falling on certain objects. *Fairholt.*

AC-CI-DÉNT'AL, *a.* 1. Having the quality of an accident; happening by accident; happening unexpectedly; not designed or planned; casual; fortuitous; as, “An accidental occurrence.”

2. Non-essential; incident. “Circumstances accidental to the tragedy.” *Rymer.*

Accidental colors, (*Opt.*) those colors which depend upon the reactions of the eye, in contradistinction to those which belong to light itself.

Accidental lights, (*Paint.*) secondary lights; effects of light other than ordinary daylight. *Fairholt.*

Accidental point, (*Persp.*) that point in the horizontal line where the projections of two lines parallel to each other meet the perspective plane. *Ency. Brit.*

Syn.—*Accidental* and *fortuitous* are opposed to what is designed, planned, or foreseen; *incidental*, to what is premeditated or intended; *casual*, to what is constant and regular; *contingent*, to what is definite and fixed. An *accidental* circumstance; *fortuitous* occurrence; *incidental* observation; *casual* remark; *contingent* expenses.—See **CIRCUMSTANTIAL**, **OCCASIONAL**.

Milton.

This is the only thing distinct and sensible that has been
advocated.

Burke.

The verb to *advocate* has been characterized
as an Americanism by Dr. Franklin, Mr. Boucher,
and other English and American writers. It is not
found in any dictionary published in England before
Mr. Todd inserted it in his edition of Johnson's
Dictionary. Mr. Todd inserted it as an active verb,
with the authority of Milton and Burke, and as a
neuter verb, with the authority of Dawbeny. Dr.
Webster, however, had previously inserted it in his
"Compendious Dictionary of the English Language,"
published in 1806.—Mr. Todd says, "It is a very
common old Scottish word, . . . and also an old
English word, employed by one of our finest and most
manly writers [Milton]." Mr. Trench remarks, "It
would be difficult to find an example of the word to
advocate between Milton and Burke." The modern
use of the word appears to have had its beginning in
this country; but it is now in good use in England,
as well as in the United States.AD-VÖ-CATE, *v. n.* To act as an advocate.Give me leave, as most concerned, to *advocate* in my

S. *almas*, *almase*, *almesse*.] This English monosyllable, *alms*, has descended to us from the Greek and Latin word of six syllables; and it well exemplifies the remark of Horne Tooke, that "letters, like soldiers, are apt to desert and drop off in a long march." It was written in the following different modes in English, before it assumed its present form, viz.: *almosine*, *almosiv*, *almois*, *almosr*, *almesse*, *almoyne*, and *almes*. A gift or benefaction to the poor; a charitable donation; charity.

Johnson says *alms* "has no singular"; Todd, that it is "without a plural." Grammarians regard it as of both numbers, some say, "Generally singular," others, "Generally plural." — "*An alms.*" *Acts, Shak., Dryden, Swift.* — "*Alms are of diverse kinds.*" *Res's Cyc.* — "Some say, 'These alms are useful,' others say, 'This alms is useful.' The Anglo-Saxon form was *almesse*. Hence the word *alms* is, in respect to its original form, singular; in respect to its meaning, either singular or plural." *Latham.*

1. One; any; some; as, "An egg," "An orange."
2. Each; every; as, "Twice an hour."

ΑΝ is the same in signification as the indefinite article *a*, being the original form of this article, but now used in the place of its derivative *a* only for the sake of euphony. Α must be used before all words beginning with a consonant, as, "a man," or with the consonant sound of *w* or *y*, as, "a oneness, a unit"; and *an* must be used before all words beginning with a vowel, as, "an apple," or with *h* mute, as, "an hour, an heir," and before words in which the initial *h* is not mute, if the accent is on the second syllable, as, "An heroic action," "An historical account." — See *A*.

† ΑΝ, *conj.* [*A. S. unnan, to give or grant. Tooke.*]
If. "Catch me *an* thou canst." *Ford.*

This word is used by Shakespeare and other old authors in the sense of *if*; as, "An it were," *Bacon*; but it is now no longer thus used.

Α'ΝΑ, [*Gr.* ἀνά.] A prefix, in words of Greek origin, implying repetition, upward motion, inversion, distribution, parallelism, or proportion. It often stands by itself in the prescriptions of physicians, denoting repetition, or in equal quantity; as, "Wine and honey, *ā* or *ana* 3 ii"; i. e. Wine and honey, each, two ounces.

Α'ΝΑ, *n.* The termination, in the neuter plural form, of Latin adjectives in *-anus*, which is annexed to the names of authors, or eminent persons, to denote a collection of their memorable sayings; as, *Johnsoniana*. It is also sometimes used separately, as denoting one of this class of literary productions.

The Scaligerana was the earliest book of table-talk which appeared under the famous appellation *Ana*. *Qu. Rev.*

They were pleased to publish some *Tunbridgeana* [sayings of persons assembled at Tunbridge Wells] this season; but such *ana*! I believe there never were so many vile little verses put together before. *Letter of West to Gray.*

AN'A-LŌGUE (an'a-lŏg), *n.* [Gr. ἀλόγος.] A thing analogous, or having a resemblance, to another thing. *Kirby.*

A-NĀL'O-GY, *n.* [Gr. ἀναλογία, right proportion; ἀνά, equally, and λόγος, speech, or reason.]

1. Proportion or parallelism between things which are in some respects different; relation

or similarity between different things in certain respects.

If there be an *analogy* or likeness between that system of things which is the subject of revelation in the Bible, and that system of things which is the subject of revelation in the natural world, then the Bible is a revelation of the same nature; this is a proposition which is not only true, but which is the basis of all true religion. *Sp. Butler.*

2. (*Geom.*) Equality or similitude of ratios; proportion. *Brande.*

3. (*Gram.*) Similarity as respects derivation, inflection, pronunciation, &c., opposed to *anomaly*; correspondence to the genius and received forms of any language.

4. (*Rhet.*) Resemblance in the relations which different objects bear to other objects; thus *youth* is called by analogy the *dawn of life*, not because of an actual resemblance between youth and morning, but because the one is to life what the other is to day.

Analogy does not mean the similarity of two things, but the similarity or sameness of two relations. *Sp. Copelston.*

5. (*Nat. Hist.*) Remote or incidental relationship, as distinguished from *affinity*, or near relationship.

Analogy of faith. (*Theol.*) the proportion that the doctrines of the gospel bear to one another, or the close connection between the truths of revealed religion. *Hale.*

A-NĀL'Y-SIS, *n.*; pl. A-NĀL'Y-SIS. [Gr. ἀνάληψις; ἀναλύω, to unloose.]

1. A resolution of any thing, whether an object of the senses or of the intellect, into its first elements or component parts; — opposed to *synthesis*.

Among the varied objects of a landscape, I behold a tree; I separate it from other objects, I examine separately its different parts — trunk, branches, leaves, &c. — and then, uniting them into one whole, I form a notion of the tree. The first part of this process is *analysis*, the second *synthesis*. — The instruments of *analysis* are observation and experiment; of *synthesis*, definition and classification. *Fleming.*

2. (*Met.*) The process of resolving intellectual operations into their primary principles.

3. (*Math.*) The method of resolving problems by means of algebraical equations.

4. (*Chem.*) The determination of the parts or elements of compound bodies; decomposition.

ÂN-TÍ-PÔDE, *n.* [See ANTIPODES.] One of the antipodes; one who is in opposition.

My soul is an antipode, and treads opposite to the present world. *Stafford.*

This word, as here given, is Anglicized, and it is found in the Dictionaries of Todd, Smart, Ogilvie, Crug, Boag, Clarke, and Webster; but it is not countenanced by the other English lexicographers. Yet, as the Latin word *antipodes* has no singular, *antipode* may be sometimes convenient.

ÂN-TÍ-PÔ'DE-AN, *a.* Antipodal; pertaining to the antipodes; opposite. *Roget.*

ÂN-TÍP'Q-DÊŞ [ân-típ'-q-dêş, *S. W. P. J. F. Ja. K. Sm. R.*; ân-típ'ôdz, *E.*; ân'te-pôdz, *Wb.*], *n. pl.* [L., from Gr. *ántrí*, opposite, and *poús, poús*, a foot.] (As a Latin word, it has no singular.) Literally, those who stand feet to feet; the inhabitants of the parts of the earth diametrically opposite, under the same meridian, and in corresponding parallels of latitude on different sides of the equator:—those opposite to each other.

Thou art as opposite to every good
As the antipodes are unto us. *Shak.*

"We frequently hear disputes whether this word should be pronounced in four syllables, as it is here, with the accent on the second, or in three, as if divided into *an-ti-podes*, with the accent on the first syllable, and the last rhyming with *abodes*. To solve the difficulty, it must be observed that the word is pure Latin; and that, when we adopt such words into our own language, we seldom alter the accent. If, indeed, the singular of this word were in use, like *satellite*, then we ought to form the plural regularly, and pronounce it in three syllables only; but as it is always used in the plural, and is perfect Latin, we ought to pronounce it in four." *Walker.*

ÂN-TÍ-PÔL-SÓN, *n.* An antidote; a counterpoison. "Poisons afford antipoisens." *Browne.*

ÂN-TÍ-PÔPE, *n.* One who usurps the popedom.

Α-ΠΟC-ΡΑ-ΦΑΛ, *a.* Relating to a copy. "*Apog-*
raphal pieces." *Lee*.

Α-ΠΟC-ΛΕΨ-ΣΥ, *n.* [Gr. ἀπολήψις, a stopping;
ἀπολαμβάνω, to arrest.] (*Med.*) A retention or
suppression of any natural evacuation. *Hooper*.

Α-ΠΟC-ΛΙ-ΝΑ'ΡΙ-ΑΝ, } *n.* One of the sect of
Α-ΠΟC-ΛΙ-ΝΑ'ΡΙCΤ, } Apollinaris of Laodicea,
who denied that our Saviour had a human
soul. *Hook*.

Α-ΠΟC-ΛΟ-ΒΕΛ'VE-ΔΕΡΕ, *n.* A beautiful statue
of Apollo, found, towards the end of the fif-
teenth century, among the ruins of the ancient
Antium. It was purchased by Pope Julius II.,
who placed it in the Belvedere of the Vatican,
whence it takes its name. *P. Cyc.*

Α-ΠΟC-ΛΥ-ΩΝ, *n.* [Gr. ἀπολλών, ἀπολλώνω, to de-
stroy.] Same as ΑΒΑΔΔΟΝ.

In the Hebrew tongue is Abaddon, . . . in the Greek
tongue hath his name Apollyon. *Rev. ix. 11.*

Α-ΠΟC-Ο-ΓΕΤ'ΙC, } *a.* [Gr. ἀπολογητικός.] Re-
Α-ΠΟC-Ο-ΓΕΤ'Ι-CAL, } lating to, or containing,
apology; said in defence or excuse. *Milton*.

fence or apology. *Johnson*.

Α-ΠΟC-Ο-ΓΕΤ'ΙC, *n. pl.* (*Theol.*) A systematic
defence; especially a philosophical or system-
atic arrangement or exhibition of the evidences
of Christianity. *P. Cyc.*

Α-ΠΟC-Ο-ΓΕΤ'ΙC, *n.* One who makes an apology
for, or defence of, another. "*Apologists* for
Christian religion." *Barrow*.

Α-ΠΟC-Ο-ΓΕΤ'ΙC, *v. n.* [Gr. ἀπολογίζομαι, to give
in an account.] [*z.* ΑΠΟΛΟΓΙΖΕC; *pp.* ΑΠΟΛΟ-
ΓΙΖΩ, ΑΠΟΛΟΓΙΖΕC.] To make an apology or
excuse; to plead in defence, extenuation, or
explanation.

Α-ΠΟC-Ο-ΓΕΤ'ΙC, *n.* One who apologizes; an
apologist. *Hanmer*.

Α-ΠΟC-Ο-ΛΟΓΕ (ἀπ'ο-λόγ), *n.* [Gr. ἀπόλογος, a story.]
A fabulous story or fiction contrived to teach
some moral truth; a fable.

Some men are remarked for pleasantness in rallery;
others for *apologues* and apocryphal, diverting stories. *Locke*.

In all ages of the world, there is nothing with which man-
kind hath been so much delighted as with those little fic-
tious stories which go under the name of fables or *apo-*
logues among the ancient heathens, and of parables in the
sacred writings. *Porteus*.

The difference between a *parable* and an
apologue is, that the former, being drawn from human
life, requires probability in the narration, whereas the
apologue, being taken from inanimate things or the
inferior animals, is not confined strictly to probabili-
ty. The fables of *Æsop* are *apologues*. *Fleming*.

Syn.—See FABLE.

Α-ΠΟC-Ο-ΛΟΓΕ (ἀπ'ο-λόγ-ερ), *n.* A relater of
apologues; a fabler; a fabulist. *Burton*.

Α-ΠΟC-Ο-ΓΥ, *n.* [Gr. ἀπολογία, a defence; ἀπό,
from, and λόγος, a discourse.]

1. A defence; a vindication; as, "Bishop
Watson's *Apology* for the *Bible*."

In the book that is called *mine apology*, it is not required
by the nature of that name that it be an answer or defence
for mine own self at all, but it sufficeth that it be, of mine
own making, an answer or defence for some other. *Sir T. More*.

2. An excuse; a plea; an explanation.

To him she hastied; in her face excuse
Came prologue, and *apology* too prompt;
Which, with bland words at will, she thus addressed. *Milton*.

Syn.—He made a satisfactory *apology* for his con-
duct, and a good *excuse* for his absence; his *vin-*
dication was sufficient.

— "This word, like *metamorphosis*, has deserted its Latin accentuation on the penultimate syllable, and returned to its original Greek accent on the antepenultimate. The other words of this termination, as *anadiplosis*, *antipthesis*, &c., retain the Latin accent, though all these words in Greek have the accent on the antepenultimate. This accentuation on the antepenultimate is so agreeable to the genius of our own tongue, that it is no wonder it is so prevalent. Johnson, Sheridan, Kenrick, Ash, Scott, Buchanan, Bailey, and Perry have adopted it as I have done, and only Smith, Barclay, and Entick accent the penultimate. So eminent a poet as Garth approves of the choice I have made, where he says, —

'Alloes the prince of his celestial line
An *apothēsis* and rites divine.' *Walker.*

AP-O-THĒ'Q-SIZE, *v. a.* To deify. *Month. Rev.*

AP-PŌTH'E-SIS, *n.* [Gr. *ἀπόθεσις*, a laying up in store; *ἀποθήκη*, to place away.]

Human desires can seek or apprehend. *Milton*.

We apprehend many truths which we do not comprehend. *Trinch*.

4. To think on with fear; to fear; to dread.

It was justly apprehended that there might be some dan-
ger in acquainting them with their own numbers. *Gibbon*.

Syn.—*Apprehend*, *seize*, or *arrest* a person accused
of a crime.—To *apprehend* and to *conceive* are com-
monly applied to things that have a real existence; to
suppose and *imagine*, often to things which exist only
in the imagination. To *apprehend* is simply to take
an idea into the mind; to *conceive*, to form an idea.
What one *supposes*, may be doubtful; what one *imag-*
ines, may be impossible.—To *apprehend*, to *fear*, and
to *dread*, all imply expectation of future evil. A
faint emotion is called *apprehension*; a stronger one,
fear; a still stronger, *dread*. *Apprehend* an unpleasant
occurrence; *fear* misfortune; *dread* great calam-
ity or tyranny.

AP-PRE-HÉND', *v. n.* To think; to suppose; to
imagine; to conceive. *Atterbury*.

ART, *n.* [L. *ars*, *artis*; It. & Sp. *arte*; Fr. *art*.]

1. The power of doing something not taught by nature; as, "To walk is natural; to dance is an art." The application of knowledge or science to effect a desired purpose; practical skill as directed by theory or science; a trade; an employment.

The object of science is knowledge; the objects of art are works. In art, truth is the means to an end; in science, it is the end itself. Hence the practical arts are not to be classed among the sciences. *H. K. B.*

Of all those arts in which the wise excel,
Nature's chief masterpiece is without well. *Shak.*

2. Skill; address; adroitness; contrivance.

Nothing is better founded than the famous aphorism of rhetoricians, that the perfection of art consists in concealing art. *Waller.*

3. Cunning; astuteness; craftiness; stratagem; deceit; duplicity; artfulness; artifice.

The ancients divided the arts into the liberal arts, which were seven in number,—viz. grammar, logic or dialectics, rhetoric, music, arithmetic, geometry, and astronomy,—and the servile arts, which comprised the mechanical arts, and were practised by slaves. The moderns divide the arts into the fine arts,—as poetry, music, architecture, painting, sculpture, &c.—and the useful or mechanical arts. Those arts in which the hands are more concerned than the mind are called *trades*.

Art and part, (*Scottish Law.*) a term denoting an accessory before and after the fact. Art expresses the instigation or advice given towards the commission

of a crime; and *part*, the assistance given to the criminal in committing it. The origin of the phrase is disputed; some considering that it is only a technical application of the English words *art* and *part*; others, that it is an abbreviation of the Latin *artifex et participes* (contriver and partaker). *Burrill.*

SYN.—*Art*, *cunning*, and *stratagem* are sometimes lawfully used in self-defence; but *deceit* and *duplicity* are the marks of a base mind.

ART, 2d *per. sing. present tense* of the verb to be.

Syn. — *Authentic* history or news; *authentic* work;
genuine text; *genuine* materials; *true* story or his-
tory; *real* occurrence.

"A *genuine* book is that which was written by the
person whose name it bears as the author of it. An
authentic book is that which relates matters of fact as
they really happened. A book may be *genuine* without
being *authentic*, and a book may be *authentic* without
being *genuine.*" *Bp. Watson.* — Dr. Hill, in his "Lec-
tures," reverses the definition of *authentic*, and
changes that of *genuine* as follows:—"I oppose
the word *authentic* to *supposititious* (or *apocryphal*),
the word *genuine* to *vouched*. I call a book *authentic*
which was truly the work of the person whose name
it bears. I call a book *genuine* which remains in all
material points the same as when it proceeded from
the author." *Dr. Hill.*

ÂU-THËN'TI-CAL-LY, ad. In an authentic man-
ner. "Not yet *authentically* decided." *Browne.*

Ā-VĒNGE' (ā-vēnj'), *v. a.* [Fr. *venger*.] [*i.* AVENGED; *pp.* AVENGING, AVENGED.]

1. To treat with revenge; to take revenge upon.

Thou shalt not avenge, nor bear any grudge against, the children of thy people. *Levit. xix. 18.*

2. To award just punishment for; to take satisfaction for.

He will avenge the blood of his servants. *Deut. xxxii. 43.*

3. To execute punishment, or take satisfaction, in behalf of another; to vindicate.

And shall not God avenge his own elect? *Luke xviii. 7.*
Avenge, O Lord, thy slaughtered saints, whose bones
Lie scattered on the Alpine mountains cold. *Milton.*

Syn. — To avenge is to punish in behalf of another; to vindicate is to defend another. The wrongs of a person are avenged, and his rights vindicated. To revenge is to retaliate, or punish for one's self, and is unchristian. — See RETALIATION.

† Ā-VĒNGE' (ā-vēnj'), *n.* Revenge. *Spenser.*

A-VÉR'RQ-IST, *n.* One of a sect of philosophers; — so called from Averroes, or Averrhoes, an Arabian philosopher and commentator on Aristotle. *P. Cyc.*

AV'ER-RÜN'CATE, *v. a.* [*L. ab, from, and erunc, to weed out.*] To root up. [*R.*] *Hudibras.*

More properly written *aneruncate*.

† AV'ER-RUN-CÄ'TION, *n.* Act of extirpating. "Averruncation of . . . diseases." *Robinson.*

AV'ER-RUN-CÄ'TOR, *n.* (*Hort.*) A pruning instrument, having two blades fixed at the end of a rod acting like scissors. *Louison.*

† AV'ER-SÄ'TION, *n.* Hatred; aversion. "Productive of aversation and disrespect." *Barrow.*

A-VÉRSE, *a.* [*L. averto, aversus, to turn away.*]

1. † Turned away or in another direction.

The tracks *averse* a lying notice gave,
And led the searcher backward from the cave. *Dryden.*

2. Disinclined; unwilling; reluctant; loath; backward; disliking.

Averse alike to flatter or offend. *Pope.*

Johnson says of this word, "It has most properly *from* before the object of aversion; very frequently, but improperly, *to*." Webster, on the contrary, says, "This word and its derivations ought to be followed by *to*, and never by *from*." Respectable authorities may be cited in support of both these views, and in some cases the same author may be quoted on each side of the question. "Averse *from* the sun's beam." *Milton.* "Averse *from* all obedience." *Hooker.* "Averse *from* peace." *Clarendon.* "Averse *to* any advice." *Clarendon.* "Averse *to* all innovation." *Swift.* "Averse *from* Venus." *Pope.* — The prevailing and best modern usage is in favor of *to*, instead of *from*, after *averse* and *aversion*, and before the object.

"The words *averse* and *aversion* are more properly construed with *to* than *from*. The examples in favor of the latter preposition are beyond comparison outnumbered by those in favor of the former. The argument from etymology is here of no value, being taken from the use of another language. If, by the same rule, we were to regulate all nouns and verbs of Latin origin, our present syntax would be overturned. It is more conformable to English analogy with *to*; the words *dislike* and *hated*, nearly synonymous, are thus construed." *Campbell's Phil. Rhet.*

Syn. — *Averse* to study; unwilling or disliking to be instructed; reluctant or disinclined to perform a task; loath to receive advice; backward in learning. — See **ADVERSE**.

A-VÉRSE'LY, *ad.* In a backward direction: — unwillingly; with aversion. *Davenant.*

A-VÉRSE'NESS, *n.* Backwardness; unwillingness; disinclination. *Aiterbury.*

As in religion, so in friendship, he never professed love when he had it not, nor disguised hate or aversion. *Mem. of Hutchinson.*

2. Cause of aversion.

Self-love and reason to one end aspire;
Pain their *aversion*, pleasure their desire. *Pope.*

† **A-VÉR'SIVE**, *a.* Averse; turning away.

Those strong-bent humors which *averse* grew. *Daniel.*

† **A-VÉR'SIVE-LY**, *ad.* Backwardly. *Chapman.*

A-VÉR'T, *v. a.* [*L. averto, to turn away.*] [*i.* AVERTED; *pp.* AVERTING, AVERTED.] To turn aside or away; to ward off.

Nor Jove *averted* once his glorious eyes
From that dread contest. *Corper.*

O Lord! *avert* whatsoever evil our swerving may threaten

"In spite of Johnson and all our best lexicographers, numerous words are enriched with a final *s* unknown to our forefathers. To all terminations formerly in *ward*, as *inward*, *forward*, *toward*, an added *s* begins to obtain even in classical books." *Mitford's Harmony in Language*, p. 370.

The following words, when used as adverbs, *backward* or *backwards*, *forward* or *forwards*, *downward* or *downwards*, *upward* or *upwards*, *inward* or *inwards*, *outward* or *outwards*, and *homeward* or *homewards*, are all given indiscriminately in Johnson's Dictionary in both forms, with and without the final *s*. They are also thus given in the principal English dictionaries which have been published since that of Johnson. The final *s* was countenanced by English lexicographers who preceded Johnson; and both forms of these several words have been, from an early period of the language, and they are still, in good use. *Toward*, or *towards*, as an adverb and preposition, is given in the English dictionaries in both forms, and both are in common and good use; but the adverb *onward* does not take a final *s*.

BANK'RÜPT, *n.* 1. A trader who fails or breaks, so as to be unable to pay his debts:—one who is subjected to the law of bankruptcy.

All persons engaged in trade, if in other respects capable of making valid contracts, are liable to be made bankrupts. *Brande.*

2. One who, from inability to meet the demands against him, is obliged to close his business, and whose affairs are intrusted to his creditors, or to assignees, for settlement.

3. (*Eng. Law*.) A trader who secretes himself, or does certain other acts tending to defraud his creditors. *Whishaw.*

This word, as first used in English statutes, carried with it the sense of an offender, which in some measure it still retains in English law, and has always been restricted in England to merchants and traders, or to those who buy and sell for gain. In the United States, the term was applied technically by act of Congress, August 19, 1841, to other persons besides merchants and traders; but the repeal of that act in 1843, together with several judicial opinions adverse to this extension of its signification, has tended to affix to the word at present very nearly the same technical definition in the United States which it has in English law; though by popular usage it is nearly synonymous with the word *insolvent*, being applied to all classes of persons who cannot or do not pay their debts, and not implying generally any imputation of fraud. *Burrill.*

BANK'RÜPT, *v. a.* To make deficient in pecuniary resources; to break. *Beau. & Fl.*

We cast off the care of all future thrift because we are already bankrupted. *Hammond.*

BANK'RÜPT-CY (bänk'rup-se), *n.* The state of a bankrupt; failure or inability to pay debts; insolvency.—(*Law*.) 14. To bring forth, as a child; to give birth to.

What could the Muse herself that Orpheus bore, The Muse herself, for her enchanting son? *Milton.*

Bear—This verb, as used in the last sense, has a peculiarity with respect to the past participle. In the passive form it is *borne*; as, "He was borne blind," *John ix. 2*; and, in the active form *borne*, as for the other senses; as, "The barren hath borne seven," *1 Sam. ii. 5*. This distinction between *borne* and *born*, though not recognized by grammarians, is in accordance with common usage, at least in the United States. In many editions of the Bible it is found, and in many it is not. It seems to have been more commonly recognized in American than in English editions.

To bear down, to overwhelm; to crush; to oppress; "Truth is borne down," the testimony of sober persons despised." *Swift*.—To bear in hand, to amuse with false pretences; to deceive;—used by Shakespeare and others, but now obsolete.—To bear off, to carry away.—To bear out, to support; to maintain; to defend. "I hope your warrant will bear out the deed." *Shak.*—To bear through, to manage; to conduct.—To bear up, to keep from falling or sinking.—To bear a hand, (*Naut.*) to be quick; to make haste.

Syn.—Bear a burden; carry a load;—conveyed in a carriage; transported in a ship;—bear affliction; bear or support a burden; endure suffering; suffer pain; undergo trial.—Animals bear their young; trees bear fruit; a garden produces fruits; flowers yield seed.

4. (*Stock Exchange.*) One who contracts to sell stocks at a future time for a certain price; one interested to depress the value of stocks.

The origin of the term in this sense is thus described by Dr. Watson: "He who sells that of which he is not possessed is proverbially said to sell the skin before he has caught the bear. It was the practice of stock jobbers, in the year 1720, to enter into a contract for transferring South Sea stock at a future time for a certain price, but he who contracted to sell had frequently no stock to transfer, nor did he who bought intend to receive any in consequence of his bargain; the seller was therefore called a bear, in allusion to the proverb, and the buyer a bull, perhaps only as a similar distinction. The contract was merely a wager, to be determined by the rise or fall of stock; if it rose, the seller paid the difference to the buyer." If it fell, the difference between the ruling rate and that stipulated in the bargain was to be paid by the buyer to the seller; and hence it was the interest of the bear, or seller, to deride the value of the stock which formed the subject of the negotiation, and of the bull, or buyer, to enhance it.

Beard is pronounced bârd in Suffolk and Norfolk, in England, according to Forby, and it is thus pronounced in some parts of New England.

"This word," as Dr. Keane observes, is frequently pronounced so as to rhyme with beard, but I am of his opinion, that this pronunciation is improper. Mr. Scott and Mr. Perry give it both ways. Buchanan sounds it short, like Mr. Sheridan. W. Johnston makes it rhyme with beard, a Scotch lord. The stage has, in my opinion, adopted the short sound of the diphthong with out good reason, and in this instance ought not to be followed; as the long sound is not only more agreeable to analogy, but to general usage." *Walker.*

BEARD (bêrd), *v. a.* [*i. BEARDED; pp. BEARDING, BEARDED.*] To take or pluck by the beard; to oppose to the face; to defy openly.

Which art he has so far advanced as to be able even to make a good orator of a pair of *bellows*. *Tatler.*

One, with great *bellows*, gathered filling air, And with forced wind the fuel did inflame. *Spenser.*

Most lexicographers and grammarians who treat particularly of this word regard it as properly used only in the plural; as is the fact with respect to the lexicographers Johnson and Walker, and the grammarians Lowth, Murray, Allen, Crombie, and Bailey. Dr. Webster and some other grammarians, however, regard it as properly used in both numbers. There are respectable authorities for using it in the singular; as, "Like a *bellows*," *Dryden*; — "The common *bellows* is formed," &c., *Francis's Dictionary of the Arts and Sciences*; — "Each *bellows*," *P. Cyc.* Smart says, "Though generally considered as plural, some authors join it to a verb singular; and this will justify the pronunciation *bell'us*." Walker remarks that "the last syllable of this word, like that of *gal-lows*, is corrupted beyond recovery into *us*." — As a plural noun, it would be analogically pronounced bēl'ōz. — See GALLOWS.

Hydrostatic *bellows*, a philosophical instrument intended to illustrate the truth called the hydrostatic paradox, that a small quantity of any fluid may be made to counteract a great mechanical resistance.

Blackguard was the name of a pot-boy or scullion, in the reign of Queen Anne. *St. J. E. Tennent.*
 In old times, when a royal progress was made, — that is, when the court moved from one palace to another, or the great nobility from one residence to another, — those palaces and these seats of our nobles not being so well furnished as at the present day, it was customary that, at such a removal, all kitchen utensils, pots and pans, and even coals, should be also carried with them where they went. Those who accompanied and escorted these — the lowest, meanest, and dirtiest of the retainers — were called the *black guard*; then any troop or company of ragamuffins; and, lastly, when the origin of the word was lost sight of, and it was forgotten that it properly implied a company, a rabble, rout, and not a single person, one would compliment another, not as belonging to, but as himself being, a *blackguard*. *Trench.*
